PREFACE

My name is Robert Neckelius, and this book is written from my perspective, but the contents of this book are a collaboration with my business partner and marketing genius Alen Sultanic, who's been marketing and selling online since 2004. The ideas in this book typically originated in Alen's head, then we discussed them, and I put them into this book.

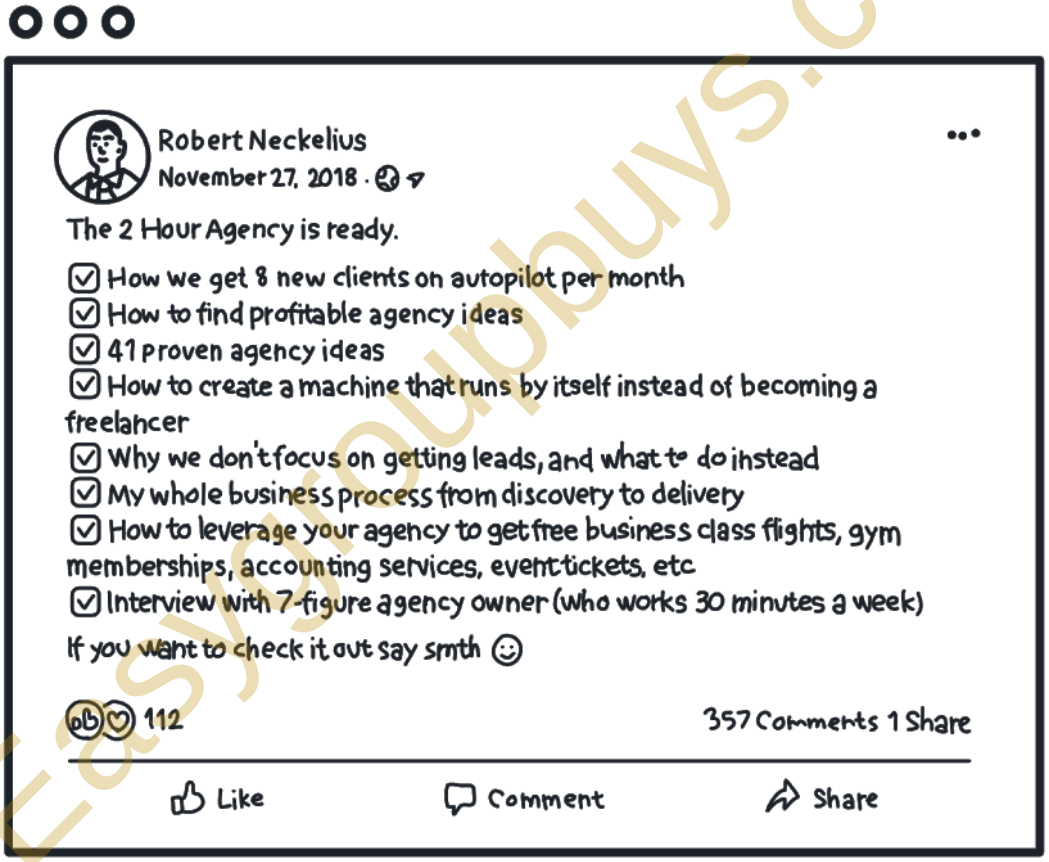
In 2012 I started a digital agency that creates animated explainer videos for the B2B market. Creating, scaling, and automating that digital agency proved to be a very attractive subject. It touched on a very common pain that agency owners are very familiar with: where and how are they going to get their next client?

I had a way of getting new clients on autopilot, and we were averaging 8 new clients every month on autopilot. I tried to sell that information through a course using a webinar. It failed. So I made another webinar following the recipe of another guru. That failed too, so I went and found another guru who had another formula for a webinar, and created that. And finally... Nope. Just kidding. That failed too. I was able to get new clients for my agency, but in my coaching/consulting business this was not the case.

One day out of desperation, and without any kind of grand plan, I sat down to write an ebook that would explain my

digital agency system. I put my daughter to bed around 7pm and ran over to my laptop to bang out a few thousand words, and that became my routine for the next couple of weeks.

In less than 2 weeks my book was done, and I made a post about it on my Facebook profile. I remember telling myself that if I was able to sell 5 copies of the ebook to my friends on Facebook, that would be a success.



48 hours and over $6,000 in pure profit later, I knew I was onto something. I'd sold 103 copies of my eBook, just on my Facebook profile alone, and I didn't even have a big audience.

Easygroupbuys.com

I then tried to sell that eBook using Facebook ads. It worked for a few days, and then it tanked. I showed it to Alen, who knew exactly how to fix it, and we became partners. Together we spent the following 12 months rebuilding, optimizing, and turning that business into a million dollar business. We made lots of mistakes, and learned very good lessons that you'll learn in this book.

Mistakes are good, we usually welcome them, but when you start to spend $100,000 per month in advertising mistakes can be a little more painful, a little more visible, and frankly, fuck your day up quite a bit. But, for every mistake we did we learned something new. We sharpened the knife, we took another shot, and we did a little bit better, and here we are, with an extremely powerful business model that will allow you to compete in a totally different way than you're used to.

Imagine being able to get hundreds of new customers every single day, and growing your audience faster than you thought possible. Imagine knowing your exact numbers before you even take the first step of starting a new business or creating that new product. Imagine giving way more value than you charge for, making your customers ecstatic about you and your company. Keep reading, and we promise we'll deliver on all the above.

Easygroupbuys.com

INTRODUCTION

Dear Reader, This is Alen and Robert. We'd like to welcome you to Automatic Clients. What you just got your hands on isn't just a book, no - it's a whole new way of doing business online that will easily put you 3-5 years ahead of all your competitors.

We know that's a bold claim to make and as marketers that's what we do - we make bold claims, but then (the honest ones) we back them up, deliver and over deliver - and in these 340+ pages - we're going to do exactly that. We're going to show you how to get hundreds of customers everyday, and turn them into high ticket and/or recurring clients.

The basis of the claim is simply this: Marketing as you know it - is no longer as effective or the primary focus of competing online in order to acquire customers and clients. Being good at marketing only allows you to get a seat "at the table" of the lucrative game we play, but to win at that game - you need something else, and that something else is the idea of competing on economics.

And this is the point where you're probably asking yourself "what do you mean economics? just show me the magic trick of how to get more customers and clients". The idea of economics is simply the idea of having a business where the math is stacked so much in your favor that you'll win even if you suck at marketing, operations, and so on. We'll leave it at that for now, and discuss economics more in depth later on.

This whole model is based on the ascension framework. The ascension framework is designed to sell a high value, low dollar priced product (think $5-$50) and then “ascend” that buyer into a high ticket back end service (think $5,000-$20,000) - all within 7-11 days using automation. Here’s the overview of the engine (and don’t worry about the details, we're going to cover all of them in the book):

First you pair the right superpower with the right disruptive idea in the right market and run ads that offer a low ticket offer. That offer can come in the form of a

- ➔ Book
- ➔ Audio Book
- ➔ Mini Course
- ➔ Reports
- ➔ Supplements
- ➔ Templates
- ➔ Scripts
- ➔ Paid communities
- ➔ Physical products
- ➔ Software
- ➔ Apps
- ➔ Memberships
- ➔ Discount clubs
- ➔ Gift cards

You can mix and match any of the above to be part of your front end product, and you price it between $5-$50, but offer $1,000-$10,000 worth of real world actual usable value (not "marketing" value)

You sell it on a proven "tri-page" sales page (we'll cover it later) that gets 10-15% conversion rate, and then offer strategically placed optional upgrades that consist of:

- Weekly, Monthly or Yearly Recurring ($9.95-$99.95)
- Bump ($7-$37) - Continuity / Recurring Offer

That's your core product. Then you add 2-3 "bigger, faster, stronger" upsells. All this comes together like a finely tuned economic machine to help you break even on the customer acquisition, and generate the price of your core product times 10 in revenue, on day zero. Effectively you're making zero profit at this stage, but instead acquiring 50 - 300+ new paying customers every single day.

In the process you're building a loyal community of followers where you will provide massive value and build trust that turns into a strong relationship with each and every customer by giving everything away that they need to succeed (NOTHING held back) regardless of how much they spend with you. Each customer must be treated with equal respect and value.

In the process you identify your level 1, 2, and 3 customers, and engineer an "awareness process" for them so "they get it" and are ready to move on to purchase other products from you.

Easygroupbuys.com

This is where you offer them a helping hand to help them implement your entire model for $5,000 - $25,000 where the goal is to retain 100% profit from that sale then potentially offer a “done for you” option at $25,000-$100,000, and possibly even a recurring option at $2,000-$4,000 / month.

You repeat and optimize the entire process while focusing on horizontal expansion where you clone yourself and repeat the process in parallel markets, and all this is based on competing on economics, not marketing, which will allow you to compete on a whole new level that very few marketers are aware of.

On your journey, you’re going to run into challenges, nothing is ever going to be easy nor perfect. The offer might not convert like you want it to, and that’s ok, we’ve been there, and know what to do. The ad networks will kick your ass and bruise you up, and that’s ok we’ve been there, and know how to fix it. The back end high ticket products might not CLICK, and that's ok...we’ve been there as well, and know what to do to make it work.

You will have these challenges on your journey, because to get to the top, you will have to experience challenges and that’s a small price to pay for having the ability to play this lucrative game at the highest levels.

But all in all you will be able to do this, because we’ve laid out everything for you, our model of marketing and selling online is based on the solution / problem model - where we give away everything without holding anything back. Let’s talk about the solution / problem model.

Easygroupbuys.com

You see, the entire mainstream thinking of selling online is based on "problem / solution". Meaning, find a problem and offer a solution. Find a market, figure out what the problem is, and then create a product that offers a solution and charge for it, sounds really good, doesn't it? It does, until you realize that it's very limiting in the sense that you're forced to hold back the best "for last" where you can charge.

This creates a problem in itself, how can you help people out, if you're holding back the best for last? You can't, and it backfires on you, since this causes your customers and clients to get only a fraction of help that they need in order to succeed. We flipped that model and instead of thinking in "problem / solution", we think in "solution / problem". Once you interchange these two positions, it opens up a whole new way of helping your customers and clients and creates what we call the "chainlink of conversions" (more on that in just a second). Here's how it works: Every time you offer someone a solution to something, that solution in itself creates a new problem. Not because you're an evil person who is manipulating people into buying unnecessary things from you. No, this is the natural cause and effect.

Think about this: Let's say you're in need of transportation, so the solution to that need is for you to buy a car. So you go and buy a new car. You now have the solution, but out of that solution you simultaneously created a new problem in that now you need to buy gas for the car, replace the tires, replace the brakes, pay car insurance, clean it and maintain it and so forth. If

Easygroupbuys.com

the car dealership was reading this book, they would realize that they could monetize many of those points.

Here's another example: Let's say you're hungry and you decide to make dinner. So you cook, and eat. But look at the simultaneous problems that arose out of that solution. Now, you have to clean the dishes, and need dish washing soap or a dishwasher, along with dishwasher detergent.

Each of these "problems" that arise out of the "solution", can only arise once the solution is fully provided to the end customer. You can't sell half a car to someone or do half the dishes. The problem still remains, but only when you provide a complete solution, does the new problem arise. And the magic is that you can further help your customers and clients by monetizing those problems. Here's an example of this book in itself. We did something no one else would do, we give away the entire model, from front to back. 330 pages, nothing held back. You have everything you need to do this.

Once you read this book, you will know how the entire model works and be able to execute. Solution provided. New problem that comes out of this is that you have to execute and do the actual work, build the funnel, write the sales copy, do the upsells, design the graphics, integrate the members area and so forth.

Since that's the next immediate problem for someone who wants to do what we teach you in this book, that's why our upsell #1 solves this problem. You can just purchase it and solve that problem (see how the solution arose out of the problem in itself?).

Easygroupbuys.com

If you want to purchase the Rapid Launch Stack, click here.
https://automaticclients.com/rapid-launch-stack

Now, let's add another one...say you got this book, and you went and got upsell #1 which is the rapid launch stack. You have the solution to both problems. You know how the model works and you have everything to build a funnel. But there's another problem that came out of that solution and that problem is that you need to be able to drive traffic to your offer. You can figure it out yourself, or you can take our knowledge, expertise, experience, and ideas that we spent hundreds of thousands of dollars perfecting and modeling them.

Again, upsell #2 does exactly that..."Converting Ads" will give you the solution that you need for that problem.

You can get Converting ads here:
https://automaticclients.com/converting-ads

What this does in itself, is create a "chainlink of conversions", and using this model, we know where our customers and clients are going to be 10 steps ahead after they come into our funnels and that's why we can give away everything and still make the entire model work. Now, let me show you the power of this: dSay you want to implement this model as fast as possible, with as few mistakes as possible, and as little money waste as possible. That's where our high end accelerator comes

Easygroupbuys.com

in, we help people implement the entire model from start to finish in 12 weeks. And for those clients who want to use this model to scale up without doing any work, we offer a custom plan where our team builds out everything for them (don't ask us, because the team is booked out building our own offers using this model).

And that's how it works - once you combine the solution / problem model with the ascension framework, you have endless possibilities of going into any market you want and not only winning but also dominating. But if you are going to do this but you will also run into challenges as we mentioned before. But you're not alone in this journey, we're going to be there with you at every step of the way. We're still learning as we grow ourselves, and everything we learn will be shared in the Facebook group here:

https://automaticclients.com/fb-group

And if you're feeling confused, stuck, helpless or anything that you think is preventing you from doing this, come into the group and ask for help. We can't help you, unless we know you need help and all that starts with you coming in and asking for help.

Most companies take more than they give. They give $5 worth of value, and charge $10 for it. We'll show you a much more lucrative way. Not only are we going to show you how to get hundreds of customers per day, we're going to rewire your whole approach to business in a way that puts you in control.

Easygroupbuys.com

You'll be giving FAR more than what you're charging, and this tends to produce ecstatic customers that can become lifelong marketers for your business. To some readers this new approach is going to cause a lot of friction. A lot of business owners engineer their business in a way where they have to "hold back" on information, so that they can sell that information for a great deal of money later on in their process.

This approach might work today, but it will not last. The key is to give it all away, don't hold back, and instead of charging for information at a later stage, charge for something else, such as helping them implement that information.

Can you imagine trying to compete with Google? What about YouTube? What about Facebook? Instagram? Why would it be so hard to compete with those guys? It's because their service is free. They can give away their best stuff without charging you for it. They don't need to make money on their core product, because they're able to make their profits from somewhere else in the business. That's why it's practically impossible to compete with them.

Well, our model is effectively the next best thing to that. Instead of it being free we might charge $5 for $500 worth of value (which means most competitors are charging $1,000 for that same thing). This allows us to run paid advertising to generate customers, and break even using the money we generate from those sales. Then we sell back end products that bring in the profit.

A word of warning: once you see that this is the only way to run your business long term, it might cause you some pain.

You might have to rebuild parts of your business and your products because you realize that the old way is simply not the right way. You might fight it, but sooner or later that $1,000 product you have might become a $5 product, and you'll make more money than ever because of it.

We've divided this book into two parts: foundations and implementation. Throughout the process of paving the way with this new business model that allows us to get hundreds of new customers everyday we've had powerful realizations. We've refined these realizations into theories and principles that you need to be aware of as you go into this for maximum results. Furthermore we dig deep into the details that go into the actual implementation of this information.

There's another thing we want to put out there before we begin. You're sitting on an incredible opportunity right now, and most people are pissing it away. One day they'll look back at today and regret not working hard, making a bunch of money, and spending the rest of their lives however they want. The internet allows anyone to become a millionaire, no matter what race, geographic location, religion, or ethnicity. This opportunity is going away. Competition grows and advertising costs increase. Eventually every market will be dominated by a few players who will have such good economics and operations in place, that you simply won't be able to compete with them. We encourage you to really think about this opportunity and consider putting some of your dreams on hold to grind for a few years, build an incredible financial foundation that will allow you to go live your dream life. Don't say we didn't warn you. Still with us? Let's talk about how

Easygroupbuys.com

you can take advantage of these incredible times before it's too late.

PART 1

FOUNDATIONS

This part of the book is very important, you'll learn powerful new concepts and ideas that will dictate how you think about and implement the rest of this book. Without understanding the theories we explain here one of two things will happen (or both): you'll either build a business that is not sustainable, and be forced to start all over again at some point, or you'll leave huge amounts of money on the table by missing out on crucial parts of

the business. The devil is in the details, so it's important to consider every word we've put into this book.

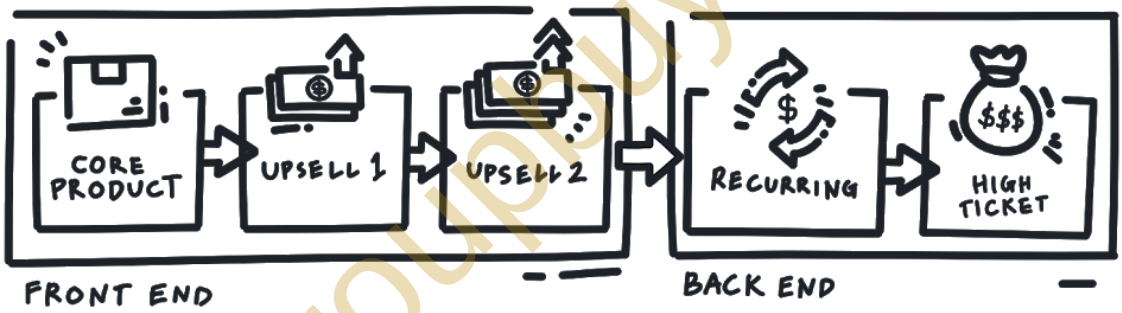
Ultimately it's the things you don't know that will crush you.

That's why understanding the foundations area is critical to you getting results. The ideas in this part of the book will echo throughout your whole business, so grab a pen and paper, and let's dig into the 30'000 foot view of this "Automatic Clients" model.

Easygroupbuys.com

CHAPTER 1

THE ASCENSION FRAMEWORK



The Automatic Clients model is built on what we call the "Ascension Framework". The million dollar idea so to speak comes down to a 3-step process of:

1. Acquiring new customers at break even using a unique acquisition engine
2. Converting those customers into high ticket (or recurring) clients (this is where you make most of your profits)
3. Fulfilling your products and services and turning your customers into lifelong, happy, renewable financial resources

Easygroupbuys.com

That's effectively what it boils down to. When I started my first web design business in 2012 it was actually a "hobby" for the first 6 months because of the simple fact that I didn't have any clients. A business that doesn't generate any revenue is not a business, it's a hobby. One day, after having tried all kinds of strategies and tactics to land my first client, I eventually reached a do or die point. I decided the only thing left to do was to hit the streets, start walking into businesses and ask them if they needed a website. Surprisingly, I was able to land a meeting from the 2nd store that I walked into. We met the next week, talked about their needs, and I created a proposal. We met again a few days later, and signed the contract, and that was the real start for me.

Walking into stores, having a conversation, coming back for a meeting, creating a proposal and then coming back for a second meeting to sign the proposal, is simply not a scalable strategy for client acquisition.

Rather, you want to be able to create relationships with new customers, on demand, every single day, automatically, and then convert those customers into more lucrative clients, without all the manual labor that went into my first deal. This is about automating the entire process, hence the name Automatic Clients.

Easygroupbuys.com

You have to sever the relationship between your time and money.

The world of business revolves around constraints and time is one constraint that we are all bound to. As long as generating revenue is directly linked with your time, then you don't have a business, you have a hobby, or a high paying job at best.

The most expensive, time consuming and difficult part of any business is the acquisition of customers. It's the reason Google, Facebook, LinkedIn and so on are able to generate billions of dollars in revenue. Because they ultimately are the gateway to customers for all businesses in the world, since they own the biggest advertising networks.

So let's start with how we acquire new customers for free using the Automatic Clients Model. We spend money on advertising, but we make that money back the very same day. The reasons why advertising is by far our primary channel for client acquisition, as opposed to SEO, Facebook groups, cold outreach, events, cold calling, and so on is because it is predictable, scalable, and you are in control. If you for example make a post on Facebook, or create a blog post you have 0% control over what happens next. You don't control how many people see those posts, and therefore every subsequent event (click, purchase, etc) is also entirely out of your control. With advertising you have your finger on the buttons, and you can control events.

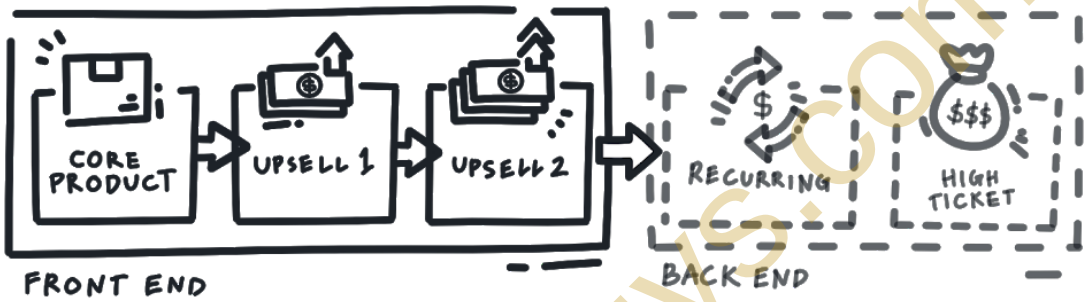
- ➔ Want 10 customers a day? turn up the dial.
- ➔ Want 20 customers a day? turn up the dial.
- ➔ Want 200 customers a day? turn up the dial.

Sure, this requires investment and a business that is dialed in, but if you're able to get that investment back literally the same day, the risk factor almost fades away entirely, only leaving you with the benefits of being in control of your customer acquisition. Here's how it works

Easygroupbuys.com

STEP 1

SELL HIGH VOLUME - HIGH VALUE - LOW PRICED PRODUCTS



Having more customers is better than less customers. This statement may seem obvious, but many don't believe it, the same way that I didn't at one point. When I started my business journey I was taught that it is better to have 1 client paying you $10,000, than 10 clients paying you $1,000. I now know this is not true if you want to generate large profits, and run an actual business, as opposed to being a work-for-hire. The only reason you would buy into the idea of having less customers being a good thing is if your business is too reliant on you. If a business is too dependent on you then having less customers means that you'd have a simpler life. You would make less money by having less customers, but because you are a human being with limited energy that is a tradeoff most people would be happy to make once you reach a certain point. The added stress of taking on more clients is not worth it at that point. So the idea of less

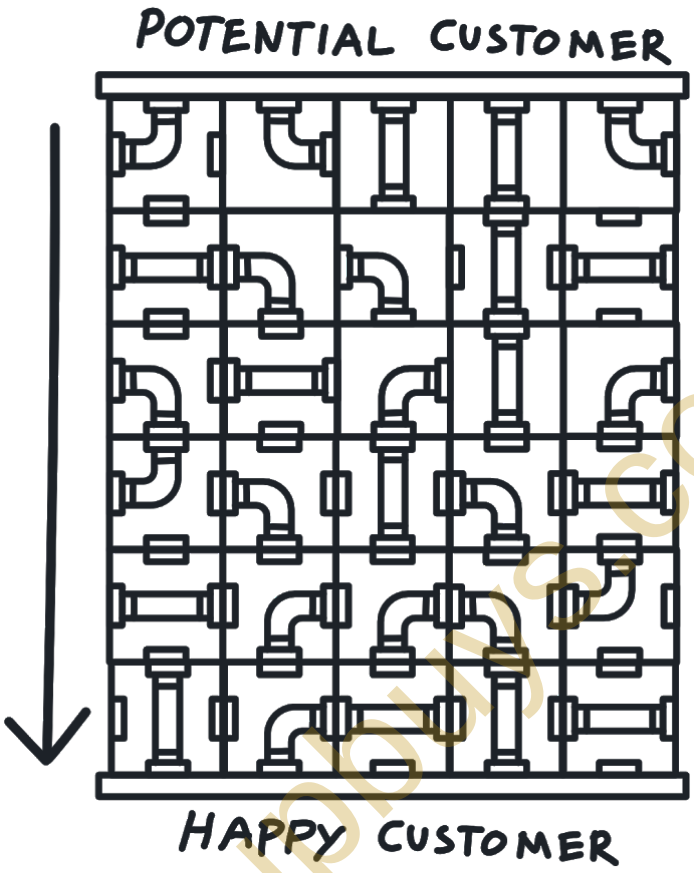
Easygroupbuys.com

customers being a good thing is simply rooted in the idea that your life would be easier.

You can also see proof of more customers being better in the fact that a lot of “economic” or “cheaper” car brands are actually the owners of luxury car brands. The high volume business is more lucrative than the low volume.

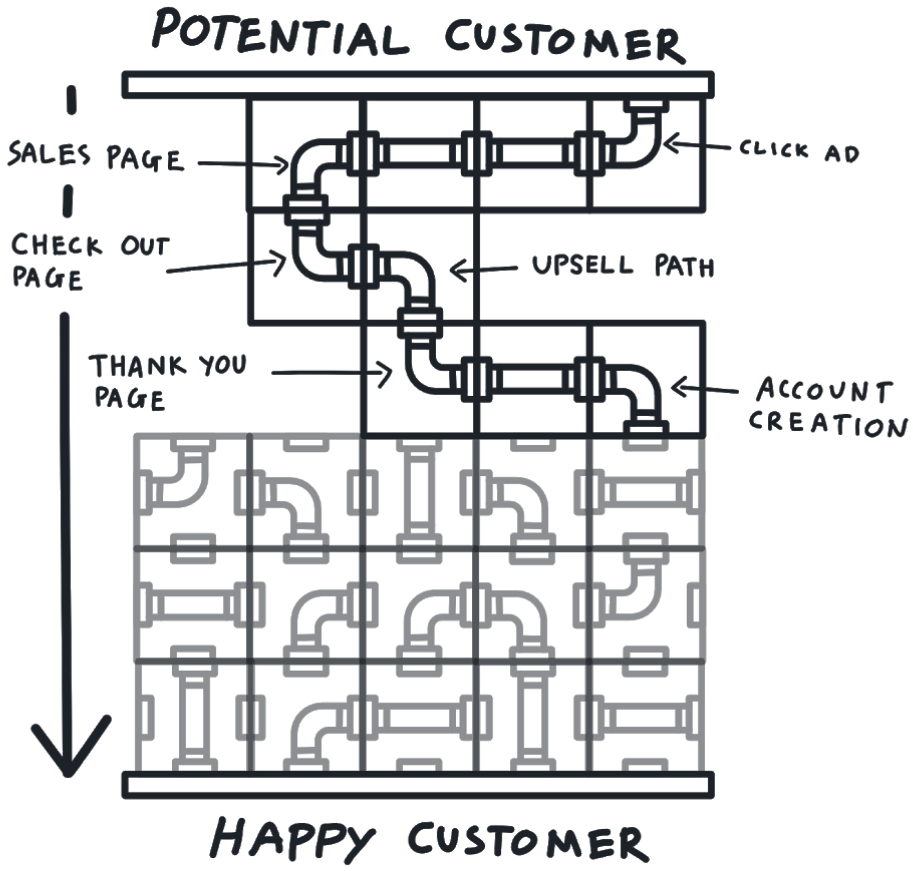
- ➔ Fiat at one point owned Ferrari
- ➔ BMW owns Rolls Royce
- ➔ Toyota owns Lexus
- ➔ Volkswagen owns Bentley, Bugatti, Lamborghini, and Porsche

I want you to think about your business as a game of Pipe Dream from the 1990s for a moment. In the game you have sewer slime flowing from the top to the bottom, and it’s your job to place the pipes in a way that the slime travels through the pipes, as opposed to spraying everywhere.



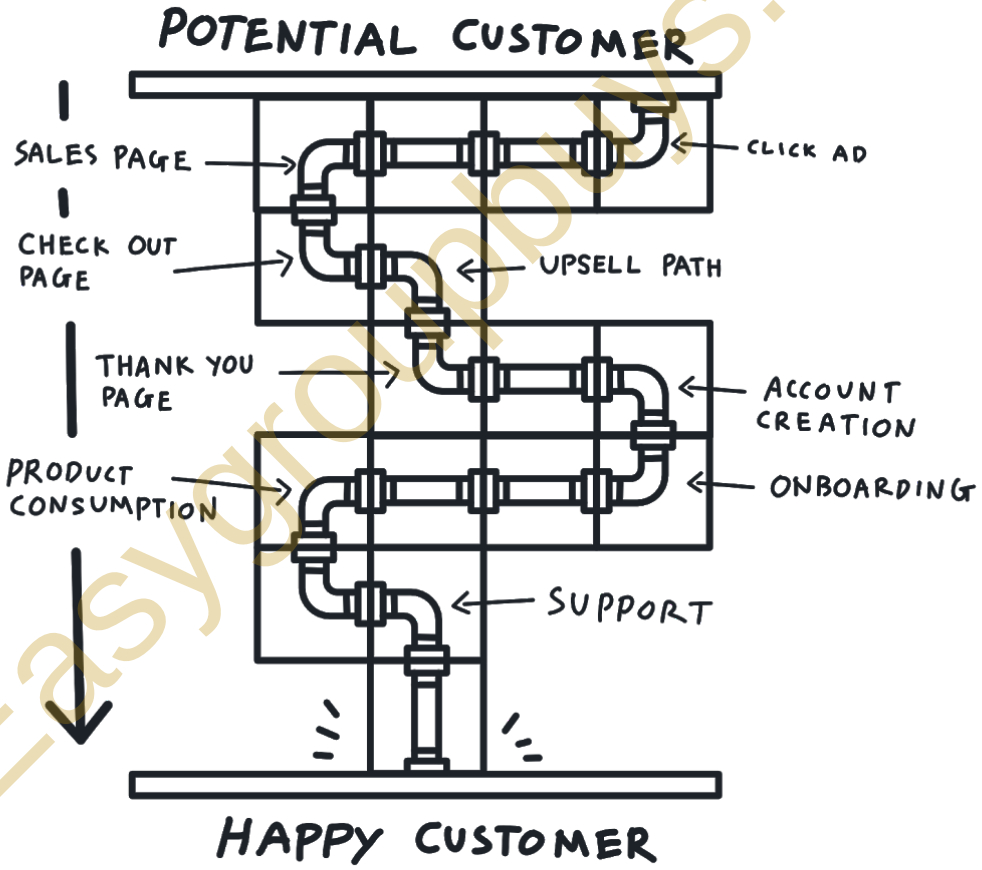
At the very top you have prospects who have not yet become customers, and at the bottom you have customers who have successfully and happily been delivered the product / service that they purchased. All the turns in the pipe system are different tasks or actions that need to occur in order to take the customer from being a prospect all the way to being a customer who received their product / service and had a great experience throughout.

Easygroupbuys.com



This includes getting their attention, pitching them, converting them, processing their payment, welcoming them, onboarding them, sending a receipt of their payment, creating a user account, delivering the product, helping them consume or use the product, offering support, and so on. For each turn that is broken, as in not automated or delegated to a competent person, you run into different levels of headaches. This is why a lot of work-for-hire business owners find that landing a new client is a bittersweet moment. They're happy they landed a client, made more money, but that clashes with the fact that they now have to do a song and dance, or in other words they have to perform, and exert energy to do so.

But, what if your piping system was close to perfect? What if customers entered the system from the top, and flowed nicely all the way to the bottom, "spitting out" customers that are so impressed with their experience and the product that they can't wait to leave a great review and privately message their friends about how happy they are about the product they bought, all with little or no input from you (you will learn how to accomplish this in this book you're holding).



If that was the case, would you still buy into the idea that having fewer customers makes sense? Or would you try to

Easygroupbuys.com

acquire as many customers as possible? The idea that fewer clients is a better idea than many clients is rooted in a broken piping system whose broken links end up being your todo list.

Now that you see why more customers is much better on a theoretical level, let's not forget about the numbers. The more customers you get on your front end, the more back end customers, the more opportunities to upsell, cross sell, and so on. Furthermore the more customers you have the bigger the following, audience, community, Facebook group, and email subscribers you also possess. This is attention, and as we will discuss a bit later attention is easily converted to cash.

In order to really drive this point home let us paint the picture with numbers of how this plays out in the real world. Let's compare the low price Ascension model to a medium priced, call it "$100 model" and the high priced automated webinar model selling $997 products, that is often seen today, just to see the numbers.

Let's say that we generate 10,000 clicks through cold advertising. The webinar landing page converts 40% of clicks into leads. There are webinars doing better than that, there are those doing worse. Ultimately if we are talking about cold traffic to a landing page that isn't completely a "blind" offer, but rather it has some information, and a video that explains what the webinar is about in order to qualify visitors, this number is going to be fairly generous. So we end up with 4,000 leads.

	Clicks	Leads
Ascension	10,000	10,000 (everyone who clicked)
$100 Model	10,000	10,000 (everyone who clicked)
Automated Webinar	10,000	4,000

Now, the Ascension model sales page converts 15% into buyers (we lay all this out for you in a later chapter). We're going to assign a 3% conversion rate to the $100 model, based on our testing (we spent over $30,000 dollars in advertising testing this price point).

And we are going to be very generous and give the automated webinar a 3% conversion rate. Now, you'll hear people claiming to have 10% conversion rate on their automated webinars. That certainly wouldn't be impossible, especially in lower competition markets that are not mature and have not been exposed to webinars, but the truth is that most of them are closer to 1%. The reason is simple: they calculate their conversion rates based on how many people stayed around to see the pitch in the webinar to pump their numbers up, or how many people watched the webinar, not the ACTUAL number which would be the number of leads. The reason they do this is because it's in their best interest to claim such numbers when they are selling business opportunity products, because it makes them seem better than they are. So 3% is a very generous number to compare. We end up with 1,500 buyers vs. 300 vs. 120 buyers.

Easygroupbuys.com

	Opportunities	CR	# Buyers
Ascension	10,000	15%	1,500
$100 Model	10,000	3%	300
Automated Webinar	4,000	3%	120

We said the automated webinar had a $997 product and let's do some quick math on the Ascension model and $100 Model to find out what revenue to expect from all this.

Ascension Model	Price	Contribution	AOV contribution
Core product	$5	100%	$5
Upsell 1	$197	20%	$39.40
Upsell 1 Downsell	$97	10%	$9.70
Upsell 2	$67	10%	$6.70
Upsell 2 Downsell	$33	5%	$1.65
Total AOV			$62.45

Let's continue and check in with the $100 Model.

$100 Model	Price	Contribution	AOV contribution
Core product	$100	100%	$100
Upsell 1	$197	20%	$39.40
Upsell 1 Downsell	$97	10%	$9.70
Upsell 2	$67	10%	$6.70
Upsell 2 Downsell	$33	5%	$1.65
Total AOV			$157.45

The revenue ends up being...

	AOV	Buyers	Revenue
Ascension	$62.45	1500	$93,675
$100 Model	$157.45	300	$47,235
Automated Webinar	$997	120	$119,640

As we can see here, on the front end alone the automated webinar is outperforming the Ascension Model and the $100 Model. We did give it a generous conversion rate, but that's fine

Easygroupbuys.com

because ultimately the back end is what matters, and that's where the number of customers comes into play.

If we have all three models doing a $10,000 back end product let's see what happens. Because the automated webinar customers have demonstrated a significantly higher financial ability than the $5 buyers we're actually going to see a higher conversion rate from $997 to $10,000 than we will from $5 to $10,000. We'll give the webinar model a generous 10% conversion rate for this, while the Ascension Model and $100 Model only can expect a 2% conversion rate since there are a lot more customers in that pool who are not financially able to spend $10,000. Let's see what happens.

	Back End Price	Conversion Rate	Potentials	Revenue
Ascension	$10,000	2%	1,500	$300,000
$100 Model	$10,000	2%	300	$60,000
Automated Webinar	$10,000	10%	120	$120,000

This is where we start to see the real effect of having a lot of customers.

Easygroupbuys.com

	Front End Revenue	Back End Revenue	Total Revenue
Ascension	$93,675	$300,000	$393,675
$100 Model	$47,235	$60,000	$107,235
Automated Webinar	$119,640	$120,000	$239,640

The Ascension model generates far more revenue. Here's the thing too.

- ➔ Even if make the webinar landing page opt in at 50% instead of 40% it generates only $299,550 vs the $393,675
- ➔ Even if bump the webinar conversion rate from leads to buyers from 3% to 4% it only generates $319,520 vs the $393,675
- ➔ Even if we cut the Ascension model Upsell #1 conversion rate in half from 20% to 10% (this product has the biggest impact on Average Order Value) it still generates $364,125 vs the improved webinar revenue of $319,520
- ➔ We completely disregarded the fact that the Ascension model typically should include a recurring product as well which brings in further revenue every single month
- ➔ The multiplier effect of the Ascension model also means when you make improvements, such as increasing your Average Order Value by just $1 that has a multiplier effect

Easygroupbuys.com

since we have so many more customers than the other models.

We have nothing against $100 priced books or webinars, in fact we bet they'd do really well on the back of the ascension model. The point here is simple: the more customers you have on the front end, the more it pays off on the back end.

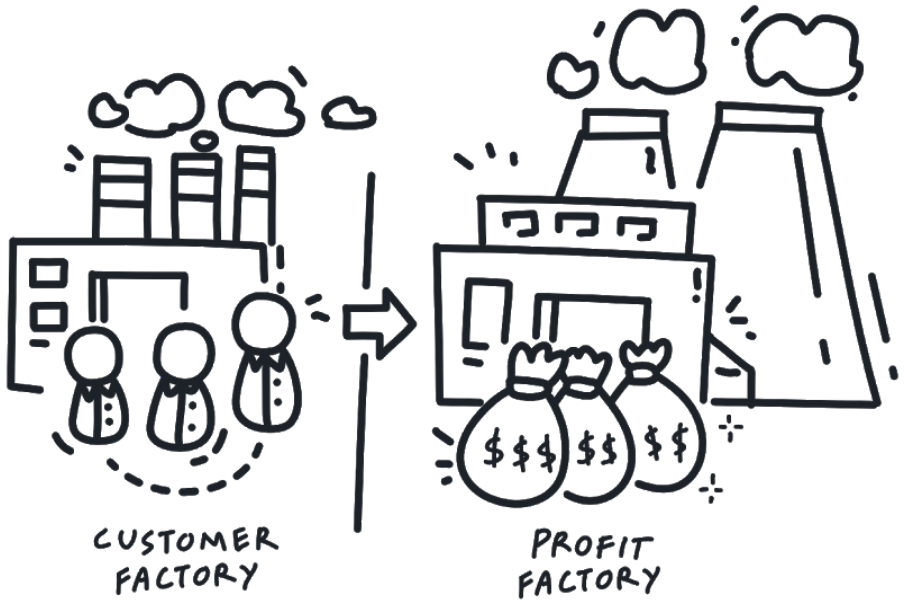
Let's discuss the psychology behind this model. The ascension model is built on the idea that instead of asking for a large investment when someone has never done business with you before, start small, and build from there. The lower the price, the easier the sale. This allows us to "buy" new relationships at scale. You don't take 10 minutes to consider whether you want to buy that gum at the cash register or not, it's not going to break the bank, so the decision is harmless. This is the same scenario we want to achieve with our front end product. There's also very low opportunity cost. If your customer is spending $997 on a webinar product, that's $997 they can't spend on something else. While of course that's true for the ascension model as well, not being able to spend $5 on something else doesn't really affect most people's finances much.

Many businesses, especially new businesses, have a very flawed approach to profitability. They sell one thing and one thing only, and it's often an expensive product or service. They put a lot of responsibility on that one product because it effectively carries two big, but totally separate responsibilities. They expect this one product to 1) generate customers and 2) turn the company profitable.

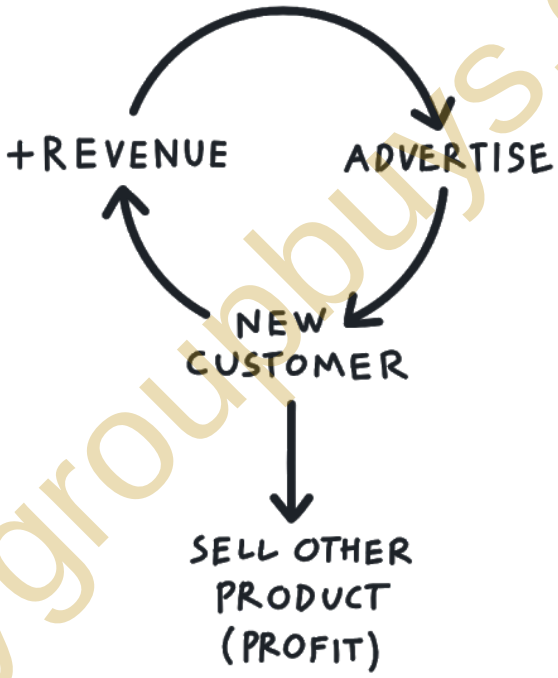
Easygroupbuys.com

Think about that. You have a business with hosting, email marketing software, freelancers or employees, advertising expenses, accounting expenses, and so on.. and you're expecting your one product to not only cover those expenses, but also spit out a profit.

That's a lot to ask. But not only that, if you consider things from the customer's point of view you'll quickly realize that it's usually an anxiety filled experience. Since the company is trying to make a profit from their one product, by definition it has to be an expensive product to pay for all their expenses and the advertising costs. So instead of starting off the relationship small, with a low dollar investment, they effectively ask to get married on the first date. Instead, we have two components to our business, which solves the problem for our company, and for the customer.



One component is responsible for attracting new customers, but it is not expected to turn a profit. Because of this we are able to provide a lot of value, without charging a lot of money. This makes it a very low risk investment. All the money made from the sales of this product goes straight back into advertising to generate more customers.



This allows us to continue to purchase attention, which leads to more and more people finding out about us. But more importantly, it lets customers buy something from us without having to make a big investment. This is the start of the relationship, and in a lot of ways this is the entire goal: to start new relationships with customers at scale. Which is impossible to

Easygroupbuys.com

do with higher priced products. You simply won't get that many people to transact business with you.

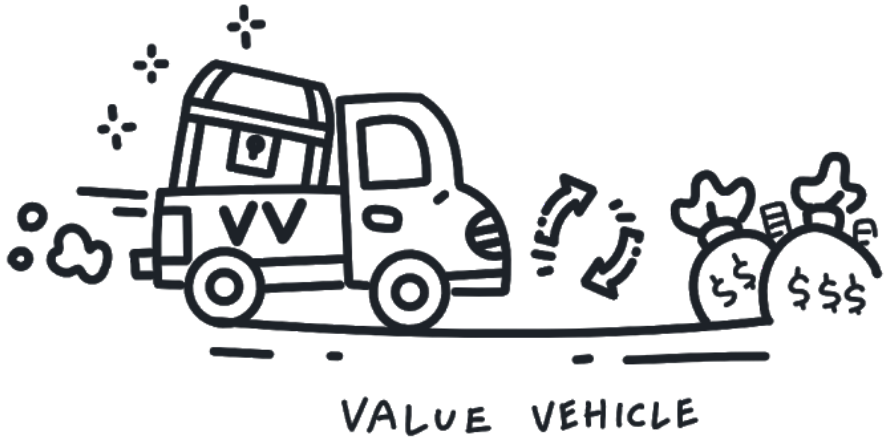
However, the people selling high ticket products are doing you a favor. What they're doing is educating your market, but not converting them to customers. They're getting everyone interested and ready to buy, and then making them an offer that 99% refuse. Literally. This is where you come in and scoop up all the high awareness prospects and turn them into buyers of your products instead.

The 2nd component of our business is not responsible for client acquisition. They're already a client, they're already on our email list, and in our Facebook group, and so on.

They trust us and because our low ticket product offered more value than anything high ticket they could buy, they know anything else we offer is going to be that much better.

They know us and we have the ability to contact them for next to nothing with information about our other products and how we can help, so any sale at this point is going to have dramatically higher margins than the first component.

So what we do is create a product (like this thing you're reading right now) that is absolutely jam-packed with value. We toss in ridiculously good bonuses and tip the scales in such a way that the value for money is simply amazing. It should be so good that if they're interested but don't buy, they're either completely broke (been there..) or just an idiot. If you create products this good your business will thank you.

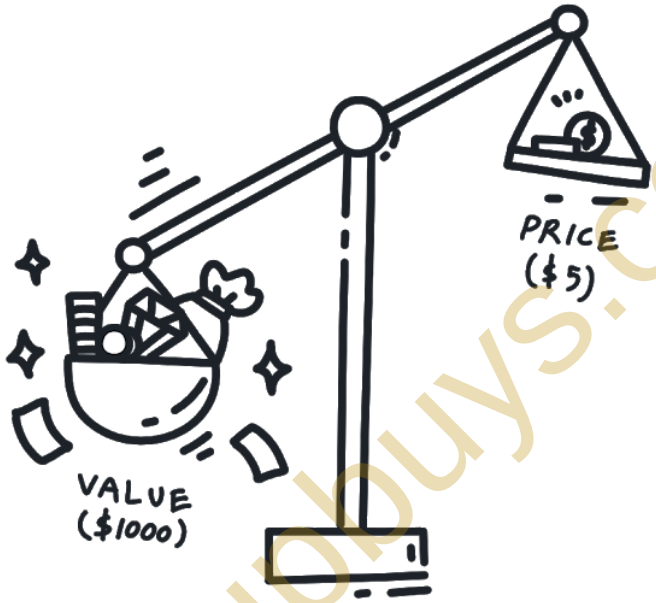


We call it a Value Vehicle ("VV") product. It's important to distinguish between a value vehicle product, a loss leader, and a tripwire. A loss leader is a corporate term for products sold at a loss to attract to customers. A Value Vehicle product is basically that, minus the losses part. We aim to sell products to attract customers at break even, but our products and our student's products are often profitable on the front end alone.

Also, this is not the same as a tripwire. First off, there's a negative connotation of tripping customers, we just don't like that world view. We want customers to voluntarily purchase our value vehicle products and be blown away by the value. Tripwires also tend to have very low value to go along with their price tag. When's the last time you bought a "tripwire" that was life changing?

Unfortunately we are going to ask you to put a lot of work into making your value vehicle product amazing and sell it inexpensively. The beauty of this is that no one else in your market is willing to do the work, so you'll create a huge advantage

for yourself. You should offer 100x+ more value than what you're asking for in return. This is what we call tipping the scales ("TTS").



I think you get the point, but now you may be wondering.. "Do I have to write a book?" The short answer is "No" you don't. The Value Vehicle can come in many formats. The long answer is:

The format of what you sell is going to be dictated by the aspiration of outcome, the preferred learning modality of the market, and what makes sense. Every thing that you consider selling is either going to be a cure, remedy, or prevention.

A **cure** solves the problem directly. It is the dentist removing those excruciatingly painful wisdom teeth. This is the easiest to sell. A **remedy** doesn't eliminate the problem, but makes it better. This is the band aid you put on your wound to keep it from getting infected, or worse. This falls in the middle as

Easygroupbuys.com

far as difficulty of selling goes. **Prevention** protects you in case something bad happens in the future. This is that Family Guy episode where Peter buys volcano insurance. It is by far the hardest to sell, because there's no pain to alleviate yet, only potential future pain.

You don't have to write a book, but depending on your business it may be the best choice. A book shows expertise, authority, and in the same way that one assumes bodybuilders have at the very least great discipline, one also assumes that someone who puts out a book at least has some level of expertise, and the discipline to turn their knowledge into an actual book. It is also a cure, which as we mentioned above is far easier to sell than remedies and prevention.

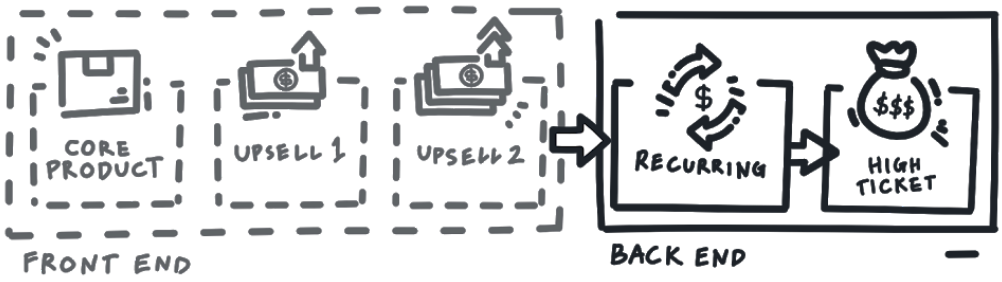
So, if it makes sense to write a book we certainly recommend it, it depends on what your market is. But there are many other avenues to take. Keep in mind that the idea here is to provide massive value for a low investment. Here are some other ideas of types of products that you could be offering as your value vehicle product:

Easygroupbuys.com

These are some ideas for you, but let's not get stuck here for now. We will cover this more in depth later on. Let's move onto step #2, this one took us about 8 months to figure out, we lost hundreds of thousands of dollars by not figuring it out sooner, and you're about to learn it right here right now. Furthermore, all the math above is useless without this part below.

STEP 2

TURN CUSTOMERS INTO $5,000 - $10,000 SALES AND / OR RECURRING BUYERS



It took us months to figure this out, and it was an expensive thing for us to not figure out sooner. But we hold nothing back, so here it is.

At this point you have sold some kind of front end product to get your foot in the door, you made your money back from your advertising efforts but chances are your customers at this point have spent somewhere between $5 and $500 with you. And you've acquired the customer, made your money back but didn't make profits yet. Most good businesses are like an iceberg, what you have at this point is the visible part at the top, now it's time to engineer the bottom part, where you make your money. In our case, we sold a $5,000 - $10,000 consulting program on the back end.

Now some of you reading this might think "Why in the world would someone pay me $5,000-$10,000, that's outrageous" and I know that some people will have a hard time accepting that truth. The only reason for that is because you

haven't done it before. Once you've sold a few of those it becomes your new normal. Charging these prices seemed like a lot to me not too long ago, now we charge $50,000 - $100,000 if you want our team to do all the things we describe in this book for you. Anyway, here's the question you need to ask.

What is the difference between a $5 buyer and a $5,000 - $10,000 buyer?

Think about it for a second. Do you think you can make a $5,000 - $10,000 sale with the same information and effort as a $5 product? You cannot. It's a different sale.

There are other things that play into a $5,000 - $10,000 sale such as trust, likability, but ultimately the awareness level of your customer is going to be the big differentiator here.

Luckily a legendary copywriter by the name of Eugene Schwartz figured all this stuff out back in the 1950's and outlined an awareness chart that plots 5 different stages of awareness (we cover this more in depth later on in this book).

Eugene Schwartz defined external market awareness. We adopted his model to define internal awareness that takes place between you and your customers. Meaning: the awareness of their problem and ultimately the solution that you have that could help them solve that problem.

It is your job to take a customer from a $5 purchase, who might be in a relatively low level of awareness into a high level of awareness. And if you haven't figured it out already, we're not

talking about enlightenment or anything like that, we're simply talking about making sure they're aware of the following...

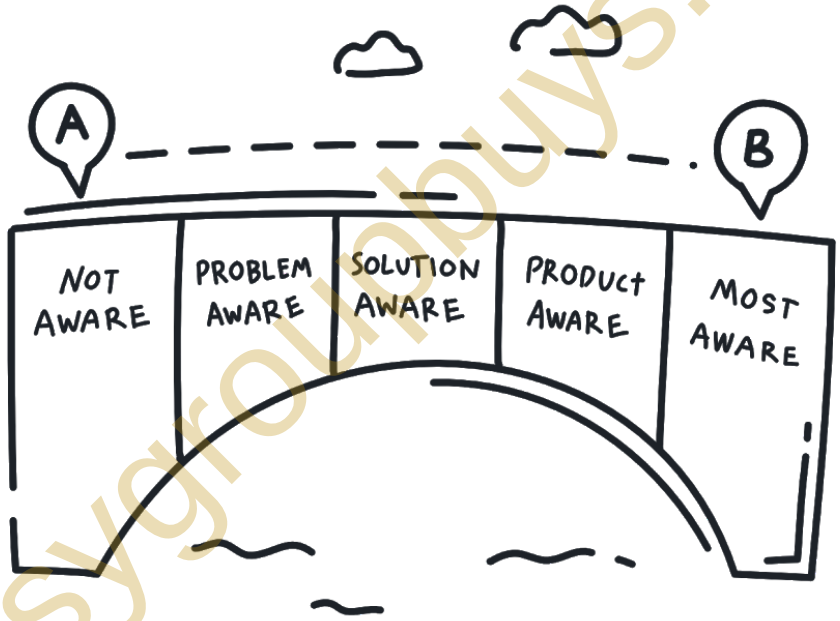
- ➔ They know that they have a problem
- ➔ They know what the problem is
- ➔ They know what the solution is
- ➔ They know about your product
- ➔ They know about competitor's products (this isn't required but can help)

Now, you can educate your customer along this journey, or you can leave it up to them to figure this out on their own, we STRONGLY suggest the former. If you educate them on all the necessary pieces of information they need, and make them like and trust you in the process, you're going to have a very healthy business. If you fail to bridge the gap between the $5 purchase and the interest in your high ticket back end services things can get much more difficult. Your customers will do their own research, and find a competitor's products instead of yours, or simply not buy anything from anyone in your industry. So you

Easygroupbuys.com

can either have them increase their own awareness, or you can do it for them.

Whoever creates awareness for the customers also creates trust, likeability and will be the one who gets the sale. You can let your competitors do it, or have the customer do their own research, or you can engineer the journey for them. How do you do all this? You do it with what we call “value bombs” and the “awareness bridge”.



You create strategic content that is engineered to move them along the awareness spectrum and ideally you utilize technology to ensure that they consume that content in a linear fashion (such as using retargeting ads and email marketing to ensure consumption). By the way, this is what webinars do really well.

Easygroupbuys.com

This takes us to step number 3 where you fulfill all your promises and make clients happy. It's also important to engineer any back end products or services in a way that scales. The last thing you want to do is have hundreds of new customers on the front end wanting to buy more stuff from you that you can't deliver on. Let's cover that next.

Easygroupbuys.com

STEP 3

FULFILL YOUR PRODUCTS / SERVICES AND TURN CUSTOMERS INTO LIFELONG, HAPPY CLIENTS WHO BECOME RENEWABLE FINANCIAL RESOURCES FOR YOUR BUSINESS

There's 2 parts to this step, but the first one is fairly obvious. If you think about it, you'll be selling a $5-$50 product. It's a value vehicle product, it will sell at scale, and it's important that you eliminate or at least minimize any human input regarding the delivery of that product. Remember, time is the biggest constraint of making money.

This is why selling eBooks and online courses is such a good front end product, it is delivered instantly and duplicates without any problems. But most importantly, it can be 100% automated and does not require human input apart from the initial setup.

You'll then add upsells that follow similar requirements (instantly delivered, doesn't require human input, and so on) and then you get to the high ticket back end products and services. The main thing to realize here is that there is a proven way to deliver this at scale.

You use the one-to-many model of creating an online course that comes with weekly group coaching. At the time of writing this we're doing 2 calls per week with our Automatic Clients students, where we personally dig deep into their

Easygroupbuys.com

businesses and help them make it work for them, as well as providing them with worksheets and video training to get the results they came for, and it works.

We have clients who passed the 7-figure mark after less than 6 months of us helping them implement this model.

This says a lot about the model. As the success of this program grows it gets increasingly important to add more team members, such as a really competent support team and even junior coaches to check in with clients and move them along the journey closer to the outcome they came for.

CHAPTER FAQ

What is the most common mistake when applying this model?
A couple of things. The first one is simply giving up before everything is done, as with anything. Apart from that it's when you try to put your own spin on the model. As they say you can break the rules once you fully understand them, but not before. We see lots of people taking our advice, changing up some crucial parts of it, then not getting the result. Don't try to change anything unless you are 100% certain of what you're doing.

How long should my book be?
There's no right or wrong answer here. But consider this: your book should help the reader, have a perceived high value, and have an actual high value by you demonstrating your knowledge. We usually recommend a minimum of 20,000 words.

If I decide to write a book, do I have to write it myself?
No. What you can do is do an outline of the book, then either have someone interview you about that outline, or simply start recording an audio version of you going through the outline and explaining every bullet point. Then you can have that recording turned into proper writing by finding a freelance writer.

Do I have to sell a high ticket back end product, I don't think I can…?
No, you do need a back end most likely, but it does not need to be a high ticket product. You can also focus on building a strong recurring program and focus on getting your profits from that product.

Easygroupbuys.com

CHAPTER SUMMARY

The AC model can be summarized into 3 separate parts. Step 1 is to build a "break even" sales funnel, selling a low dollar product that allows you to acquire hundreds of buyers from any ad network on any given day.

Step 2 is to bombard those buyers with value and engineer their journey in an awareness-increasing way that gets them to the point of being completely aware of how else you can help them (your other products), and converting them to buyers of those high ticket and/or recurring products/services.

Step 3 is to deliver on your promises, the front end products should ideally be 100% automated by sticking to delivering information, while the back end can be delivered at scale with a one-to-many model which is effectively an online course combined with weekly group coaching.

That's how the model works, and your brain might already be coming up with ideas for how to make this work for your business, but let's not get ahead. There are a few very important concepts that you need to understand before you even attempt to do this.

Easygroupbuys.com

CHAPTER 2

TRANSITION PERIODS

Easygroupbuys.com

The reason business opportunities exist is because of transition periods. As one industry transforms into its next edition it opens up the door for new businesses to come in, or old businesses to transform. Jeff Bezos became the world's richest man thanks to the transition periods he capitalized on, as did Bill Gates before him and another one will take their place in due time. As technology advances new industries are born and this too opens

up opportunities. Where everything stays constant is a place where opportunities don't arise. Communist countries don't have opportunities because all the industries are dominated by a few selected players, and there's no chance of starting your company to compete. All the real estate is owned by the government so there's no way to buy low, fix up, and sell high.

Every economy, and every industry goes through transition periods due to innovation. And innovation is due to the ability of the ecosystem to rapidly exchange information which leads to new breakthroughs.

Idea pollination occurs when you put a concentration of people in one location. There's a ton of technological advancement coming out of Silicon Valley, not because of that sweet California sun, but because of smart tech people having idea sex. Google, Yahoo, Facebook, Intel, HP and Twitter all came out of the same geographical area for a reason.

Since innovation is rooted in the rapid exchange of information, and the internet being the most advanced, and fastest medium of information exchange in the history of humankind, innovation and in turn transitions take place faster and more often than ever. In other words the rate of change is increasing.

What used to take a decade now takes a year, and what used to take a year now takes months and what used to take months now takes days. As time passes and change occurs so do the businesses and business models in those industries in order to keep up with the rapid pace of innovation. New players are entering markets and old players are forced out. These transition

Easygroupbuys.com

periods can be huge opportunities, and they can also be devastating to businesses already doing well. The key is to know what to look for and to pay attention to leading and lagging indicators of transition periods.

Toys 'R Us is bankrupt because of their inability to adapt to shopper's ever-growing preference of shopping online. They outsourced their online sales to Amazon, instead of doing it in-house, and it broke them.

Just because a business makes it through one transition period doesn't mean it'll stay in business forever, but a lot of credit has to be given to Netflix for transitioning their entire DVD mailing business into the first of a kind streaming service it is today.

The reason this is an important chapter is because at the time of writing this we're going through a transition period where

1) Facebook ad accounts and profiles are being banned left and right due to the fact that there are 10,000,000 advertisers as of writing this book and many of which are abusing the ad network
2) Advertisers are boycotting the network and demanding change to reflect their brand values.
3) Social media ad networks are getting increasingly strict about what types of businesses are allowed to run ads because certain types of businesses affect the user experience on the platform.

4) New competitors are popping up daily in low barrier to entry industries, including competitors from 3rd world countries such as Nigeria and India
5) “Funnelhackers” are copying your business overnight
6) Ad spying tools help them copy your ads instantly allowing your competitors to cut down the learning curve
7) Cost of advertising is going up due to little or no barrier to entry companies entering the ad networks in bulk and starting to spend money
8) Attention span is decreasing due to an incessant amount of content on YouTube, Instagram, Facebook, TikTok, and you name it. Everyone wants in on the attention gold rush.

Because ultimately there’s a lot of money in it and everyone wants a cut. All these things leave less room for error, and forces you to step up your game. This is where the opportunity of all this comes into play. Since this change is inevitable which tends to break whatever business model or product is currently successful in any given market, it means some new business model or product has to arise. So where DVD rentals was once a viable business, a monthly subscription model to live streaming on-demand movies and TV shows became the new model. Now everyone’s doing it. Netflix started. Then Hulu. Amazon. Disney. Apple. And so on. At some point this model will also change once again.

Filip Tysander started the Daniel Wellington watch company in 2011 when elegant looking watches only had elegant

Easygroupbuys.com

price tags. He created a watch that was affordable but looked expensive. So he had a quality product, at least from a perception standpoint. Then he started doing something that nobody else was really doing at the time: he started giving out exclusive coupon codes to people with big social media followings and gave them a commission for every sale. We call it "influencer marketing" these days, but at the time the term did not exist. He had a good product and combined it with a new way of marketing, and in 2017 the company did $90 million dollars in profit. Filip owns 100% of the company. This is the kind of strategy that can bring amazing results: you combine a fresh take on a product that people are already buying with a selling system that works amazingly well.

Transition periods are precluded by the development of new technology. 4G LTE allowed Youtube to work on mobile devices, which exploded their mass market adoption, giving birth to a whole new era.

The point here is to watch your market and the precluding technological developments. Is it reaching some kind of boiling point? Are the consumers fed up with the current products and businesses? If so, what new solution can you offer? What new business model can you deploy? In the example above you'll note that Daniel Wellington wasn't the first company to create a watch, far from it. They simply provided a fresh take on the watch, and combined it with selling systems that were different from all the other watch companies. Usually all you have to do is look to other industries for the answer, there's no need to reinvent new business models.

CHAPTER FAQ

How do I find transition periods in my market?
The key is to identify warning signs that change is about to happen. For example: Facebook is banning advertisers for seemingly no reason at all, in masses. This has people fleeing to YouTube, and this is a warning sign that change is happening. Transition periods are always occurring in every market, so it's not so much the idea that one big doomsday is coming, but rather that a constant change is always happening, and that you can gain a big advantage simply by being aware of it. Another big thing to pay attention to is the public feedback and complaints that the top companies and products in your market is receiving. Ask people you know who bought their products and see what they thought. If you address their feedback you'll be ahead of the curve.

How do I capitalize on transition periods?
Well first you have to know what market you're focused on. Once you know that you should start to look for what is changing in the market, what products / solutions are becoming obsolete, and think about how you can replace them. Also consider introducing business models from other industries such as when Dollar Shave Club introduced the subscription model to the male grooming market, which allowed them to compete with giants like Gillette, and ultimately sell for $1 billion dollars.

CHAPTER SUMMARY

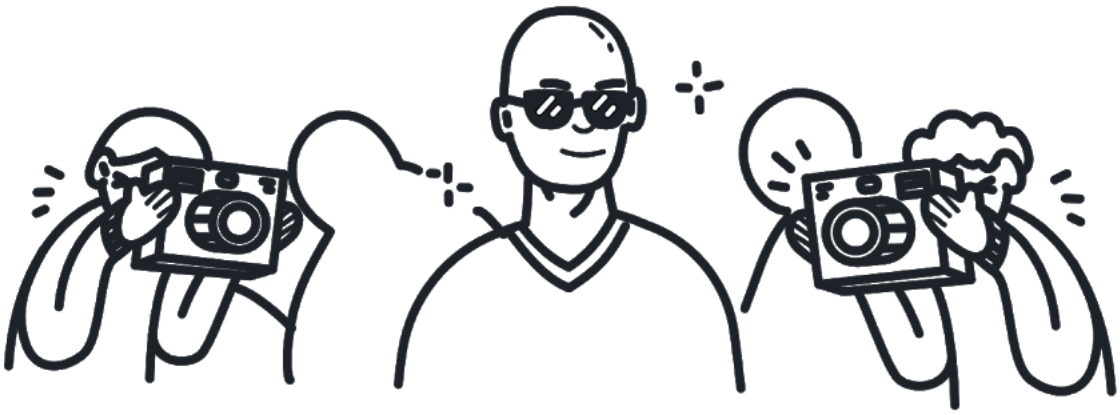
The rate of change is increasing. This creates and destroys opportunities faster than ever before. The world is always

changing, and so does every industry. No one is immune to change. Every market eventually gets sick of the products on offer, and the business models of today lose their effectiveness. Both these things are opportunities for you. You can introduce fresh products that still meet the needs of the customer, and apply business models that are either working in other industries, or are completely new (this is usually only needed when new technology is introduced, such as the ability to offer on-demand live streaming of entertainment vs. playing a DVD).

Do not think that you or your business is immune to change. Do not think that you, or anyone else for that matter, knows the future. Keep a steady finger on the pulse of the market, and you should be able to spot potential opportunities to stay ahead.

CHAPTER 3

HOW PEOPLE GET FAMOUS



Fame alters the perceived value of things better than anything else. It allows things that cost next to nothing to be sold for up to 1,000%+ mark ups, and it works so well because humans are tribal by nature, we ping off of each other to determine the value of things.

- ➔ The average marketing consultant charges $1,000 for one day's work. Jay Abraham charges $50,000

- ➔ Most sneakers are $30-50. Yeezy's retail for $350 and are scooped up and then resold for over $1,000+
- ➔ Most life coaches charge $500 per month, Tony Robbins famously has a $1,000,000 per year client, and does not take on 1on1 clients anymore
- ➔ Most people on cameo.com charge $50 for a video response, Caitlyn Jenner charges $2,500

But we're not really here to talk about Caitlyn Jenner, however we should talk about what causes fame, and more importantly how in this day and age you can actually engineer fame for your own benefit.

The reason this is important is because fame, even on a micro level, can have a really big impact on your business. Because of our tribal nature as human beings, fame puts us higher on the social podium, and that allows you to sell more expensive products with ease, compared to if you were unknown. That's why this topic is worth discussing. Engineering fame like we are about to teach you was NOT possible just 15 years ago, that's what's really fascinating.

Let me explain. If you really boil it down, fame is just attention, lots of attention, over a period of time. This was not always the case, in the past you had to be famous for something you did, or you couldn't get attention in the first place. You had to have an extraordinary skill in order to acquire the attention which led to fame. Kim Kardashian was really the first person who became famous on a global level just from getting lots of attention for the sake of getting attention, not because she was a

Easygroupbuys.com

great singer, actor, businesswoman, and so on. This opened the floodgates, and with the evolution of the internet, not only did it become clear that you could become famous without possessing some extraordinary skill, it also turned out that you didn't have to walk around hoping that attention would find you, if you had the money you could simply purchase the attention yourself, as if it was a chocolate bar in a vending machine. Or even better, if you understand our business model, you can buy attention and get your money back the same day, while you keep the attention.

When you create an advertisement and put it up on YouTube, Facebook, and so on, you get attention. If you play that ad 100,000,000 times, all of a sudden you start getting recognized just walking around whatever city you live in. The challenge of course is being able to pay for those 100 million impressions, and that's where our model comes in. Don't get the wrong idea, by no means is the goal of our model to acquire fame, but if you want it, it's there for you. The goal of our model is to help you build a massively profitable business.

So if you use the Ascension model to create a really good product, with upsells, and you put your face in the ads that you run, you could spend $1,000 on running that ad, which gives you X amount of impressions, a Y number people find out about you, click the ad, buy the product, you make your $1,000 back, and then you rinse and repeat. Think about it, if you are able to advertise like that, and make your money back the same day, you now have the ability to get NEW people who never heard of you before, to find out about you. Once they find out about you they can follow you on social media, join your email list, buy your

products, and so on. So while you advertise your product, your fame grows alongside your business. You now have a fame engine.

Now, fame is irreversible, so before you assume that it'd be cool to be famous, consider the downsides. When you think about it this is how most people get famous, the only difference is that it's on other people's dime. When The Rock finishes a new movie, the Hollywood studio producing it has a multiple-million dollar budget to spend on acquiring attention for The Rock, because they want people to go watch that movie. The same goes for Taylor Swift, or Drake. There's an economic engine behind most famous people, and with our model you can build your own engine. This applies to people just as much as it applies to companies. The Automatic Clients model is the economic engine for fame, use it as you wish.

COMMUNITY

Humans are incapable of placing a monetary value on anything without the participation of other humans agreeing to that value. All markets are dictated by supply and demand of goods and services.

Rolex is notorious for artificially limiting the number of watches their approved dealers are allocated each and every year so it has a perception of higher demand, which in turn controls the price and in turn profitability. And this is where the idea of community comes into play. There's two reasons most people are obsessed with having followers, fans, Facebook groups, subscribers, and so forth…

One of them is ego based and the other one is profit based. You can't cash in your ego at the bank, nor can you buy that car you always wanted with ego points. Thankfully, that's 99% of the market. The smart 1% is profit based, which is the strategic use of an effective community model in their business.

Now, ultimately you can't really control your community 100%, it should be an ancillary area of the business that benefits it, but not the core pillar. By being the leader of a community you are automatically viewed as an authority, on different levels depending on the size of your audience, but an authority nonetheless. The value of authority comes from the fact that humans use shortcuts to make decisions.

The appeal to authority is one of those shortcuts, which basically means that they have to expend less energy in order to make a decision, by listening and learning directly from the authority.

Easygroupbuys.com

Why do you think you can match an arbitrary failed product with a celebrity and all of a sudden the thing is a hit?

... Such as the George Foreman grill for example. It was reported that the company behind the grill eventually paid George a lump sum of $138 million dollars, instead of having to pay him 40% of the profits every month. I think we can agree that a simple grill matched with a celebrity turned out to be a success.

It's the transfer of authority that makes the product sell, even if the celebrity lacks relevant authority in the specific market the product is aimed towards. All of this helps you sell more, and is the root of your community.

It also allows you to create an environment where if you bring value to the people in your community, they start to go out in the world and preach your message. It's one thing for you to tell someone about something, but it's much more impactful for someone else to tell someone about you and your business. They start to convert the people in their life into your fans, followers, and even customers, without you doing anything. This can have a tremendous impact on your business, because other people start making claims for you. Having someone else make claims on your behalf is 100 times more powerful than you making claims yourself.

This is an important idea because truthfully we tend to put almost all our focus on paid advertising because of the fact that it is something we can directly control, and measure. The value of your community is hard to measure, it's tough to put a number on it, and it's tough to predict the income that comes from it, but the rule of thumb is that you should be able to make

Easygroupbuys.com

$1 per community member per month (assuming you do everything right). So there is no doubt that the value of having “raving fans" that can’t stop talking about you is disproportionately high.

The other benefit to having a community is that we all know that starting out is always the most difficult. You have no momentum and so to get your first buyer of your product takes the most amount of effort. If you build up your community you can easily survey that community and introduce new products and have buyers ready to make a purchase without you having to spend money on advertising right out the gate. You should advertise your products but it certainly doesn’t hurt to send out an email, or post in your Facebook group about your new product, and launch that way, since it doesn’t cost you anything but brings in revenue. This was how I made my first $6,000 from the 2 Hour Agency eBook, by selling it to my tiny Facebook friends list….

Building a community is one thing, but engaging them is another, and that’s the key to being able to monetize it. Engagement is a combination of mechanics and great content. The great content part is quite self explanatory, and the mechanical part is different on each platform. But the general idea is this, don’t say: “Hey here’s a new piece of content we recorded, enjoy: LINK”. There are two problems with this: 1) you are not asking for engagement, and 2) you are linking away from the platform, which will generally get you far less reach. Instead what you’ll see people that are dialed in do is say “Hey I’m thinking of creating a piece of content around INSERT

OUTCOME.. If you want me to, let me know below if we get 40 comments I'll do it". Now, it's kind of cheesy, and annoying, but it will generate a lot more engagement AND anticipation. Then if possible once you post the content do it natively on the platform you use to maximize reach.

You usually shouldn't be charging to be in your community, but once in your community you should be able to generate $1 per member per month in revenue by effectively engaging and monetizing the community. The monetization is most effective when the selling is more soft, and covert, as opposed to a constant pitch fest. We've all been part of communities that turn into a pitch fest and most of us simply stop paying attention due to the lack of value.

One very important note on your community is the fact that the people that end up being your most valuable high ticket clients are typically the silent observers, or "shadow lurkers". If you do some research you'll find that the uber active members in your community are seldom the ones that end up giving you lots of money, it's the opposite. The reason for this is just that people with a lot of time on their hands end up being active in the community, and the people who have more money tend to have less time, so they consume but often do not participate. The reason this is important is because you should try to consider this so you don't optimize too much for the active members who don't pay you as you might steer your community in a direction that the people who you really want to reach aren't onboard with.

Also remember that you're typically at the mercy of some platform, whether it's Facebook, LinkedIn, and so on. This poses

Easygroupbuys.com

a threat to your community and so never rely too much on that platform, and that community for your livelihood. It can be taken away from you, and it has been taken away from many.

CHAPTER FAQ

I don't want fame, can I still use this model?
Yes! Our model is not about getting famous. If one wanted to get famous by putting their face on the offer they're creating, and in the ads they're promoting, etc, they would eventually reach different levels of fame depending on market size and how much money they end up spending on advertising. But again, that's not what this model is aiming for. It's all about creating a successful business. You can either not have a "face" to your offer, and just be a company with no spokesperson so to speak, or you can find other experts that are happy to be in front of the camera, and you'd just take care of the behind the scenes stuff, like marketing and operations.

What should I look for in a partner to do the public facing / content side of my offer?
This is a good question. Ultimately you have to think of your partner in a similar way that you look at a spouse. No partner is going to be perfect, so get that thought out of your head. Ideally they should be used to being on camera, and have the ability to do so a lot. This means having camera equipment (you can always buy more of this), a good place to record, and ideally they have a good routine as far as not being on the move goes, because that makes it very hard to get video content done. As far as characters go we look for honesty, integrity, and reasonableness. Meaning: you will have arguments and the degree to which the two partners are reasonable is going to determine how those arguments pan out. Me and Alen argue all the time, but we are both reasonable so the arguments are about finding out the truth, not about who is right. Furthermore, you want a partner who is

better at some things than you are, and you should be better at certain things than they are. This is when 1 + 1 can become 3. The last thing to consider is discussing expectations of each other before working together. One person might want to dedicate full time to this project, whereas the other person might have a family, a full time job, and only be able to put in 1-2 hours per day. This is something you'll want to discuss before getting started otherwise it will cause friction down the road.

I don't have a following in my niche, do I need one to get started?
No. You'll build an audience as you advertise your AC offer, but you don't need one to start. If you have one it'll help you get some initial sales to generate cash to put into advertising, but it's not required.

CHAPTER SUMMARY

Fame can augment your business since we as humans tend to pay more to get closer to authority. Fame is not the goal of our business model, but it can be a side effect of it due to the massive amount of attention that you will be able to purchase on social media ad networks.

Community plays a big role in your business, and you will naturally be able to create a big community simply by utilizing our model. If you're getting 300 customers per day you can expect lots of them to join your Facebook group and so on. Once you have members joining you need to engage them with great content and monetize them by softer covert selling attempts that ensure you don't turn your community into a pitch fest.

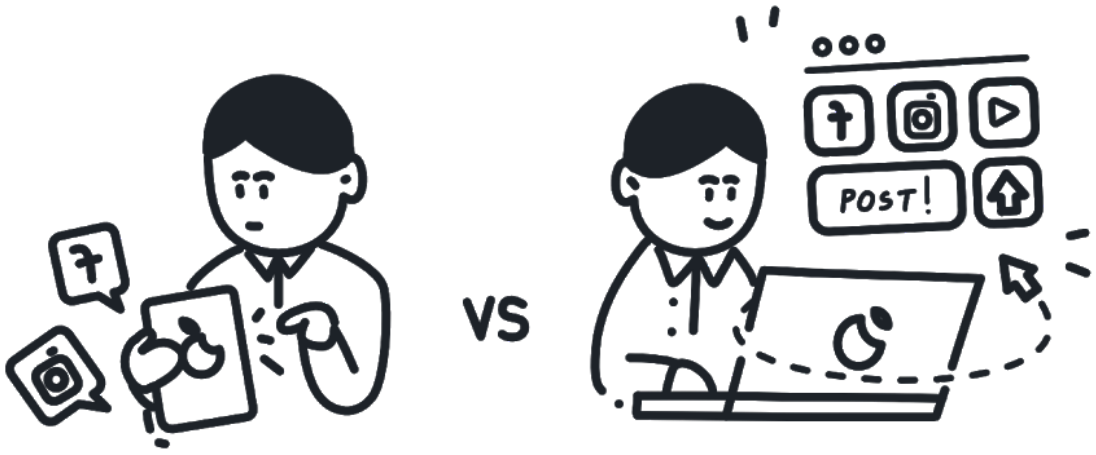
CHAPTER 4

CONTENT PRODUCTION VS. CONSUMPTION



Earlier we talked about the transition periods and how there are precursory events that take place such as technology advancements. One of those being the 4G LTE connectivity for mobile devices, and now 5G.

Not too many years ago there was a big focus in the tech world to increase bandwidth which was nowhere near where it is today. The industry succeeded more and more in this quest and

the consequence was the ability to create and consume content on a level we had not seen before. You may remember the days when buffering videos on YouTube was something you'd run into pretty much every time you tried to watch a video.

Some of us even remember days when the internet didn't exist. Some of us remember days when the digital camera didn't exist. Most of us remember days when the smartphone didn't exist. This constant evolution of technology has made the production of content, really good content for that matter, easier and easier, and at the same time cheaper than ever.

Now you have a high quality content production device right in your pocket, you might even be holding it right now, and you also have a distribution network linked up to the entire world in that same device.

However, this poses a problem for many of us. With such accessibility competition reaches new levels of sophistication. Some of the content available to us for free on YouTube is absolutely amazing. It's so good you can't stop watching. And it's free.

I'm not interested in cocktails and bartending, yet I can't stop watching videos from the "How To Drink" YouTube channel which offers an amazing cocktail (pun intended) of a charismatic main character, high production value, and interesting cocktail facts.

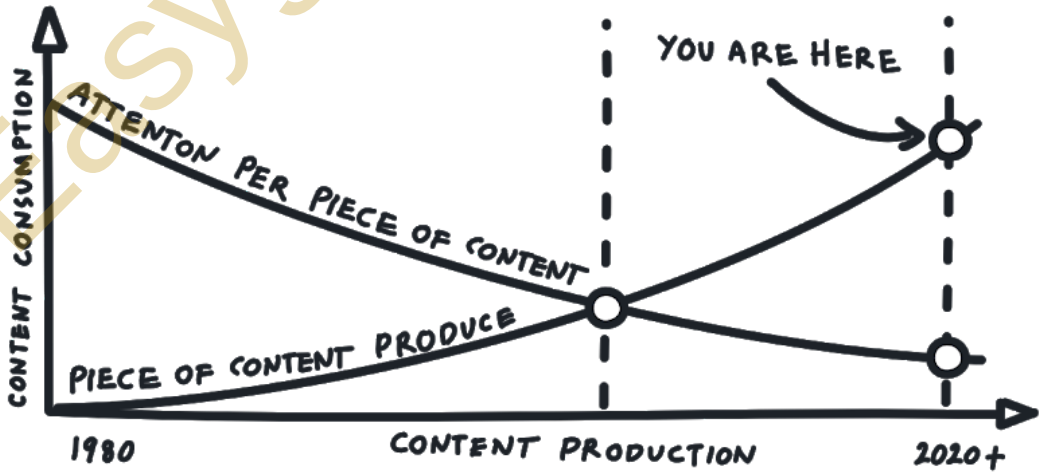
That's one aspect of the bad news. The competition is getting to an absurd level of sophistication and quality. The other problem is that you can multiply content but you cannot multiply attention.

Easygroupbuys.com

Content is infinite, attention is finite.

Each person has 24 hours a day to spend on something, but when Gary Vee records a 45 minute keynote speech, his GaryVee team of 30+ employees, will go to work chopping the keynote up into 5 short form videos to distribute on Facebook, Instagram, Linkedin, TikTok, and YouTube. They'll pull 8 quotes from the keynote which the graphic designer turns into cool images for Instagram. Their cartoonist grabs 4 concepts from the keynote and creates 4 images from that. The audio guy rips the audio and turns it into a podcast episode for iTunes and Soundcloud.

You see where I'm going here? 45 minutes of content became 4 hours of content. We multiplied the content, but we can't multiply our attention.



Easygroupbuys.com

While content is great, and I'm a big consumer of it, you do not want to get stuck relying on the constant creation of content in order to sustain your business. Human energy is limited and "YouTuber burnout" is a real thing that stems from "the unrelenting pressure of releasing another video". Content creation is a "young man's game" where eventually, you just won't have the energy to keep up anymore. So while being a content creator can work really well, it is not a sustainable way to grow a business with large profits over time.

The FunForLouis YouTube channel is an example worth looking at. Now, I'm sure Louis enjoys making videos and there is value in that, but from a business perspective things are bad. The channel was started in 2011 and has 1,829 videos at the time of writing. That puts him at about 200 videos per year, or uploading one video every other day, for years, now almost a decade. That's a lot of work. A full time job most likely. Many of his latest videos get around 20,000 views, and according to SocialBlade his estimated earnings from YouTube every month are $130 - $2,000. Imagine working full time for a decade and making $2,000 per month from it? Again, I'm sure he enjoys making content, but as a business this is absolutely NOT the game you want to play, because things are only going to get worse.

There is also the consumer of the content, and they just don't have much attention left at the end of the day. It is getting increasingly difficult to get their attention and have them consume your message because of the volume and the quality of what's out there. Think about this: when was the last time you were bored? Remember back in the day? You were bored every

Easyguruguys.com

single day. Now you have endless entertainment at your fingertips.

You should put out content, but that should not be the thing you compete on. As a content creator you can get banned, sick, become a victim to algorithmic changes that stops your content from being shown, and so on. You're at the mercy of someone else. Given the incessant supply of outstanding content you are simply setting yourself up for an unsustainable business model. Rather, you should compete on economics, and we'll cover that in depth later. If your economics allow you to pay for advertising to grow, you'll always be able to compete, regardless of your competition, or the platform you are using.

CHAPTER FAQ

Do I have to keep creating new products all the time?
No. If you have your front end product suite, and back end figured out that should be enough for 2-3 years of growth. When it is time to create new products you should create new front end products that bring in more customers who you can sell the same back end products to.

Should I avoid content marketing?
Far from it. Content, or value bombs as we call them, are an integral part of bringing people into your world. What we're trying to make clear is that relying on constant new content creation for attention is not a sustainable business model due to human energy being limited, and the fact that you're competing with an overwhelming amount of high quality content from other creators. You should use content to amplify your business, but make sure there's an Automatic Clients type of offer attached to that content so that you can make lots of sales and build a profitable business on the back of that content.

Easygroupbuys.com

CHAPTER SUMMARY

Attention is a currency you need to come to terms with, and learn to acquire on demand. If you wanted water, would you rather do a rain dance, or turn the knob on your tap for an instant stream?

This is the game you're playing if you're putting out organic content praying for exposure, instead of just learning how to advertise and recuperate the investment from the advertising.

If you're able to bring people into your world by having them consuming your content, joining your email list and Facebook group, by paying for advertising and then making your money back in the process you will reach unfathomable levels of success.

CHAPTER 5

3 LEVELS OF CUSTOMERS

All customers are not created equal. In fact, some are better than others, yet all are required if you want large profits. There are 3 different levels of customers, and we recommend you sell to all 3. We spoke in the beginning about how a lot of companies, especially coaching, consulting, and agency companies typically sell 1 maybe 2 products. We touched on the economic issues that come with that, but the other part of it is the fact that they're usually only selling to one type of customer. This is fine, but if you want to grow your business it's usually ideal to expand the horizon, and start selling to different types of customers.

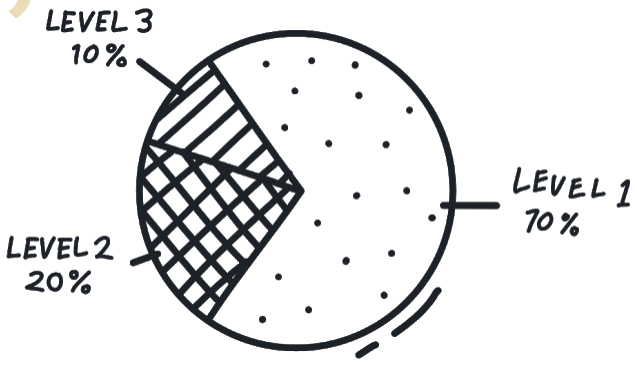
Why is this important? All of your customers are not cut out for all of your products. You can waste time and profits by either not selling to forgotten levels, or trying to sell a level 3 customer product to a level 1 customer.

The 3 Levels concept was a realization Alen came to after having worked with quite a few consulting clients who paid him

Easygroupbuys.com

up to $2,000 per hour for help with copywriting, webinars, and their offers. He found that he was dealing with two kinds of people. One type never got the result because they were unable to put in the work to launch, always had excuses, and blamed others, whereas the other type got great results, didn't need a lot of handholding, and were generally great to work with. Then after discussing this further with some other high level consultants they pointed out that not only did they have the same experience, but there was also another level that fell in between the two extremes.

So what do we mean by different levels? Effectively you want to be able to put customers into 3 different buckets, and have products to sell to all 3. Since this is coming from a coaching/consulting company a lot of our focus is on selling our high ticket consulting program, so keep in mind that this is the lens through which we see clients. The differences between these levels are a combination of psychographics (attitude and aspirations) and finances.



Easygroupbuys.com

The reason behind understanding this is important, and anyone who has been in a sales position knows the pain of speaking to an unqualified lead who does not have the budget to purchase what they have to sell, yet out of politeness they sit through their presentation while wanting to kill themselves.

In many ways you'll also find that these three categories also apply to employees where we talk about A, B, and C-players.

LEVEL 1 CUSTOMERS

To be crass: these are your "worst" customers. While for the most part they're completely normal people, they tend to spend the least amount of money yet demand the most. Most of this is actually for financial reasons, so you can't really blame them, but some of it is also psychographic (their attitude and aspirations). The number one reason you don't want to sell high ticket products to this group (apart from them not being able to pay for it) is that they tend to deflect responsibility. They do not take ownership of their problems, instead they put the ownership of their problems on others.

If you ask them why they haven't succeeded at their given goal yet their answer will most likely be that it's the fault of someone else, and they will not take any responsibility for their lack of results. And guess what, when they fail to get results from working with you - you'll be blamed next.

For this reason you simply don't even want to sell them anything other than your "one way" products such as a book, where you're not interacting with them on a regular basis.

Easygroupbuys.com

The truth is that these customers will make up the majority of your customers as far as volume goes, and about 50% as far as revenue goes. For this reason they're an important part of the business, and although I may have sounded harsh in my description above, the majority of the people in this category are totally normal people who just don't have the funds to buy higher priced products and services from you, which is fine.

They're a great addition to your community and tend to bring a lot of engagement. Level 1 customers rarely become level 2 and level 3 customers, although it does happen. I know this because I was a Level 1 customer who worked on myself for years. I started taking full responsibility for the quality of my life and my bank account. I started investing in myself. It didn't change overnight, but it's possible if you are committed.

One big problem with Level 1 customers is that they have giant blind spots. You can give them all the help in the world, but information will enter one ear and escape the other. They'll listen to you but they can't hear you. You're speaking a different language. They're subconsciously filtering out information to make it fit their world view, and their plans. You can't change their mind if your life depended on it. This is why it's so hard for a Level 1 to become a Level 3. Because they have to be committed enough to the outcome to stick to the journey as they proceed to make big mistakes for a few years. Eventually they realize that the answers they need are already out there, they just need to find and pay the right people for it. They need to be humbled so to speak, once that occurs they can proceed and enjoy massive growth. Here are the general traits of level 1 customers:

Easygroupbuys.com

- ➔ Blind appeal to authority
- ➔ More demanding than level 2 & 3
- ➔ It's not part of their identity, it's just something they're trying out
- ➔ Primarily motivated by getting away from pain
- ➔ Lower financial ability than level 2 & 3
- ➔ More difficult to work with than level 2 & 3
- ➔ Take less action than level 2 & 3
- ➔ Complain much more than level 2 & 3
- ➔ Will spread negative reviews but rarely positive
- ➔ Little recurring revenue from this level
- ➔ Seek magic bullets and instant gratification
- ➔ Will only spend $50-$100 on average
- ➔ Lots of customer service and hand-holding
- ➔ Deflection of responsibility
- ➔ 10-40% refund rates
- ➔ A lot of competition for these customers
- ➔ Level 1 customers rarely become level 2 customers
- ➔ They don't understand the problem they have and need you to help them articulate it

LEVEL 2 CUSTOMERS

Level 2 customers are a little bit more committed than level 1, a little bit less than level 3. They're a little bit better off financially than level 1, a little bit less than level 3. They refund a little bit

less than level 1, a little bit more than level 3. They take a little more responsibility for their problems than level 1, a little bit less than level 3.

Level 2 customers can become level 3 customers if the circumstances are right. They can go from a dabbler to fully committed, and anyone who has gone through this usually remembers the specific moment when this happened. Typically their lack of results got them to a point of desperation, or "rock bottom" leaving them with no other option than to step up and do something about it. Here are the general traits of level 2 customers:

- ➔ Not 100% committed to transformation yet
- ➔ Hobbyist consumer
- ➔ Dabbling with the idea
- ➔ Motivated 50% by getting away from pain 50% toward pleasure
- ➔ Don't have both feet in
- ➔ Not after magic bullets
- ➔ Possibility -> attainability
- ➔ 50% deflection of responsibility
- ➔ Will only spend $100-$1,000 on average
- ➔ Limited repeat buyers
- ➔ 3-15% refund rates
- ➔ Less, but more sophisticated competition than level 1
- ➔ Level 2 customers can become level 3 customers if walked through the right process
- ➔ They somewhat understand the problem they have but aren't convinced they need a solution for it

Easygroupbuys.com

So now that you're aware of level 1 and level 2 customers, let's talk about level 3 customers. Level 3 customers will be customers you love working with, so much so that you can see yourself hanging out with them and having a beer. They will buy your front end product, all upsells and your high-ticket program.

LEVEL 3 CUSTOMERS

Level 3 customers are fantastic. They'll spend money with you. They understand it takes work to get the result. They're not looking for a miracle, just something that works and a little bit of love from you (they're still humans). They rarely refund because even when they feel like it they come to the conclusion that the purchase was nobody's fault but their own. They often reach levels beyond yours and become authorities in their fields with their own communities.

Level 3 customers are committed and tend to be repeat buyers if you continue to offer value and engineer the sales process properly. Here are some traits of level 3 customers:

- ➔ 100% Committed
- ➔ Full mastery
- ➔ Motivated primarily by gaining pleasure
- ➔ Dedicated to transformation
- ➔ 1-3% refund rates
- ➔ Will spend $1,000-$100,000
- ➔ They become not only evangelists, they become experts (people that lead their own local tribes)
- ➔ Repeat buyers

Easygroupbuys.com

- ➔ Very little customer service and hand-holding. They don't have time
- ➔ Unlimited buying power dedicated to their transformation
- ➔ Willing to perfect at the basics, intermediate and then the advanced
- ➔ Very little competition for these customers
- ➔ They are itching to spend money (but with the right person)
- ➔ They look for trust
    - ◆ Authority
    - ◆ Certainty
    - ◆ Authenticity
- ➔ They just need to hear someone articulate their main pain point. The one thing holding them back from a breakthrough. And then believe they have the answer
- ➔ They know the problem they have and just need a solution to fix it and are willing to pay for it
- ➔ Value builders

We only accept level 3 customers in our high end programs and regularly reject level 1 and 2 customers from joining, this allowed us to build an incredible culture in our program, because everyone there takes responsibility for their results, and we help them along the way. These are people we want to spend time with, and we learn a lot from them as they by definition have a desire to constantly learn and improve.

Level 1 Customers	Level 2 Customers	Level 3 Customers
Financial ability: $	**Financial ability:** $$$	**Financial ability:** $$$$$
Takes responsibility for their own problems: Rarely	**Takes responsibility for their own problems:** Sometimes	**Takes responsibility for their own problems:** Almost always
Refunds: Often	**Refunds:** Sometimes	**Refunds:** Rarely
Maintenance/demands: High	**Maintenance/demands:** Medium	**Maintenance/demands:** Low
Usual motivation: Away from pain	**Usual motivation:** 50/50	**Usual motivation:** Towards pleasure

CHAPTER FAQ

How do I know what type of person I am dealing with?
First of all, don't worry too much about this, it becomes clear as you experience different people more and more. But in a nutshell simply look for the traits we outlined above for each level. Are they financially on a budget? Do they seem very needy / high maintenance? Do they take responsibility for past failures, or is it always someone else's fault? And so on…

How do you reject customers? Don't they get angry?
No, most of them appreciate it. Ultimately we reject customers because they're not a good fit for our program, not because they're bad people. If anything it just makes people want to join even more, but you can always recommend a better suited competitor.

CHAPTER SUMMARY

There are 3 levels of customers, and you should sell to all 3. By removing any one segment of your customer base your revenue will go down.

While we still believe in selling to Level 1, you should avoid directly spending your time working for or with them. As you go from working with Level 1 clients to Level 2, your business, and life starts to dramatically improve. Then when you go another step and only work with Level 3 you make yet another giant leap. Now your business turns into something you actually enjoy doing for the simple fact that you work with high caliber people who you also learn from. They're people much like you,

and you'll find yourself wanting to meet them in real life. This is the litmus test for the caliber of your customers. Does meeting a bunch of them sound like a nightmare, or something you get excited by?

It's important to note that if you follow the Automatic Clients model which offers a low dollar product on the front end you will end up with a mixed bag of all 3 levels. As you ascend people to your high ticket back end products you should speak to the level 2 and 3 customers and weed out the level 1 by paying attention to the characteristics mentioned above. Not because level 1 is a bad person, but because they simply do not qualify for your back end high ticket products, and getting them on a sales call is simply a waste of everybody's time.

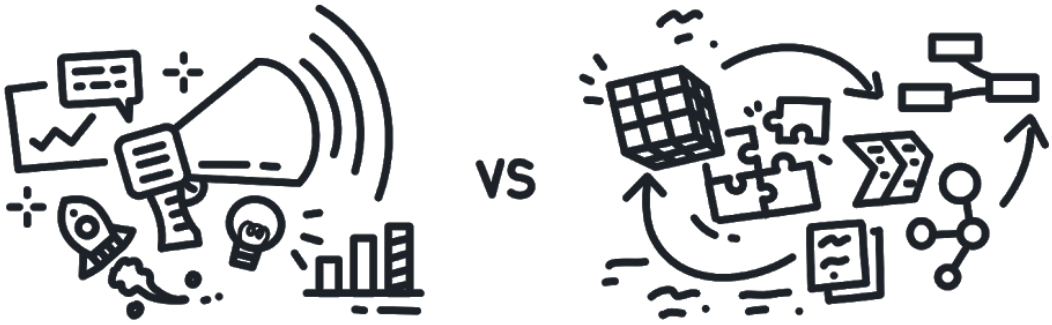
CHAPTER 6

MARKETING VS. PROBLEM-SOLVING



In October 2018 Billy McFarland was sentenced to 6 years in prison and ordered to forfeit $26 million dollars after masterminding the Fyre Festival fiasco most of us already heard about. The Bahamas-planned luxury music festival was promoted hard by heavy hitting social media influencers to hype the average Joe into spending all his money on attending this luxury festival just to be considered cool. Billy was in way over his head, and as we found out, the whole thing was simply a crap product

with great marketing. Billy isn't the first person to pull such a thing off.

In December 2017, Juicero, a startup backed by $120 million of investment, shut its doors seemingly overnight after it came to light that their $400 juice pressing machines were completely unnecessary, and the fresh fruit packets Juicero sold could easily be squeezed into a glass with bare hands. Pure marketing. Not problem-solving.

But we understand why this happens. There's something really exciting about coming up with a new product or service idea that you know will sell. When an idea like that comes to me, I instantly grab a pen and paper and start plotting out my world-domination sales funnel, upsells, and so on. And the truth is that marketing-based products can be useful to get your foot in the door, and make that initial sale, but you better have other products focused on problem-solving if you want them to stick around, and become repeat buyers.

The big problem here is that where the ideas and products should be coming from is a "problem-solving" source, not a "marketing" one. Starting and running businesses that are built on a marketing foundation as opposed to a problem-solving foundation is completely doable, but poses the same threat as a dormant volcano.

Everything seemed fine and dandy in the Philippines in 1991 until the Mount Pinatubo volcano erupted out of nowhere and destroyed thousands of buildings, and killed over 800 people. The same could happen in your business if you build it on any foundation other than a "problem solving" one.

Unfortunately it's a lot easier to come up with a cool idea that sells, than to actually solve a problem, and produce a measurable outcome.

The point being: you might get by, but you could also wake up one day and realize that you hate yourself and your business because even if successful, you'll know that you're not actually solving any real problems. You've just figured out how to sell stuff, and how long will it be until everyone finds out?

This reminds me of Steve Jobs' brilliant pitch when he was poaching John Sculley from Pepsi. "Do you want to sell sugar water for the rest of your life or come with me and change the world?" When you build a business that focuses on solving problems that brings people real results a couple of things will happen.

1) You'll want to spend time with your customers
2) You'll create a better product
3) Your customers will actually get results
4) They'll love you
5) They'll tell their friends about you

When you actually get people results it causes a chain reaction of positive events that improve your business and easily increases the longevity of that business by a factor of 10!

Our north star is to get results for our clients. Once they get results, everything else takes care of itself.

For many of us this change in thinking requires significant reprogramming of our brains. I specifically remember having a "marketing based" product idea to go along with this very book you're reading right now. I thought "what if we made a page on our website that was a directory of businesses, where you'd pay a small fee and we'd put your company on there with a link and so on." I know we could easily sell that with the volume of customers we get, and it'd be super easy to deliver on, but luckily I asked myself this question: "would that actually bring anyone results?". The answer was an obvious "no", so I came up with another idea that was actually going to help you.

WHAT BUSINESS ARE YOU REALLY IN?

It's important to consider what business you're actually in. There's 2 parts to this question.

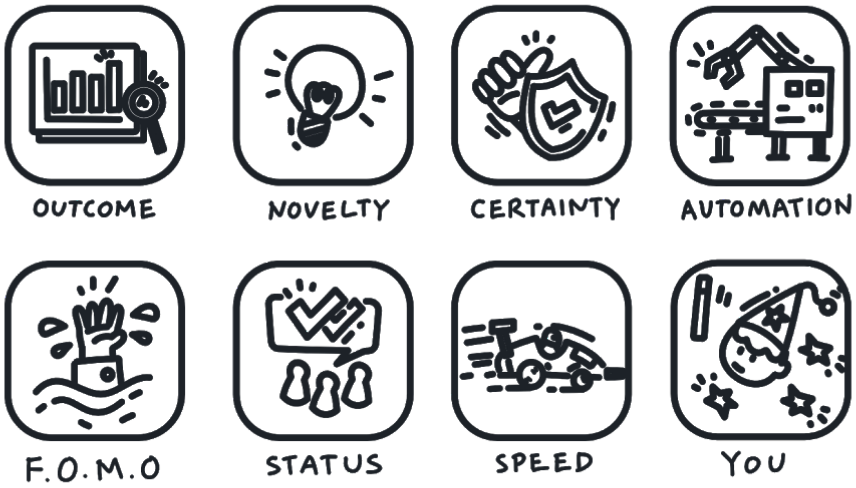
1) What's the real reason people buy from you?
2) What is actually the thing that drives profit in your business?

The first question has to do with the deeper reason for why people buy from you. Why does someone buy a Rolex? Is it because it tells more accurate time? No, it's because it elevates

their status. This is what we mean when we say “what’s the real reason people buy from you?” The more clarity you can have regarding the reason they buy from you the better you’ll be at giving them just that. We buy food because we’re hungry, but we don’t buy Chanel bags because they are good at holding our stuff. There’s a deeper reason.

The second question has to do with what part of your business actually drives profit. If you saw the movie “The Founder” about McDonalds you’ll remember Ray Croc coming to the realization that McDonald’s was actually in the real estate business, not the food business. McDonald’s was buying up property like nobody else and leasing that property to franchise owners. This was driving huge parts of their profit. If McDonald’s never realized this they would certainly put less focus on the real estate side of the business. Similarly if you don’t realize that it’s actually the Newsletter that you’re sending out that’s ultimately bringing in all your profits (or whatever the case may be) then you’ll focus less on it. You have to figure out what that one marker in your business is so that you can do your best in moving the needle for that marker. To give you some practical ideas about what this looks like in the real world here’s what the answers are in our business.

First of all: what’s the real reason people buy from us? We discuss primary mechanisms of desire in the How To Optimize Your Marketing chapter below, for now let’s just look at some of the reasons people buy:



- ➔ Outcome
- ➔ Novelty
- ➔ Certainty
- ➔ FOMO (wanting to be part of something)
- ➔ Status
- ➔ Speed
- ➔ Automation
- ➔ You (getting close to the wizard)

The reason people buy our book is a combination of wanting the outcome, and the novelty of the solution. The reason you'll want to join our Automatic Clients Accelerator is because of certainty. You'll improve your chances of success by having us help you implement the information. This is interesting because most info marketers hold back on their "secrets" so that they can sell you the information in another product later, without realizing that the reason someone buys a book from you vs. joins

your consulting program, are totally different. We give away all the information in an inexpensive book, and we charge for implementation.

That's the magic here. We're giving you the same information that we give to people that pay us $5,000-$10,000 for help. The only difference is we help them implement everything, we fill in any details that come up, and we help them avoid making mistakes that cost us hundreds of thousands of dollars in lost revenue. Level 3 customers understand the value of that. Level 1 & 2 default to "I can figure it out on my own cheaper".

Getting results for your clients does something that is unique, it gets people to go out and convince other people to buy your products. Just recently, Alen, who is a world class copywriter, spent 30 minutes with one of our clients on the group call helping with his copywriting. The client was so excited after the call that he immediately went to one of his friends who was considering joining the program (we had already spoken with him) and proceeded to convince him to join as well. This scales as you get more and more results. So that's #1 for us, the more results we get our clients the more people will be convinced to apply for our program without us doing anything.

The second thing that drives our business is ideas, or content. The more unique ideas and perspectives we give you the more you'll be inclined to want to give us money. The reason for this is because you'll come to the conclusion that we can help you as our content will demonstrate that we have the solution to problems that you have had in the past, problems that you have

right now, and problems you know you'll face in the future. So again: results, and ideas/content drives our business, so that's what we focus on.

CHAPTER FAQ

How do I figure out "what business I am really in?"
By paying attention to what works for you. What moves the needle for your business? Again, for us it's client results, and big ideas / content. That's what we observed makes a difference, so that's what we double down on. You can probably make a quite good guess right now, but the exact answer you'll find by testing things and measuring their results.

CHAPTER SUMMARY

Marketing is fun and a crucial component of your business, but it should not be the source of product ideas. Rather, shift your focus to solving someone's actual problem (that they would pay for). You'll actually like your customers, make a really good product, and that exponentially increases your chances of actually putting in the effort and focus needed to succeed. Furthermore, spend time thinking about the real reason why people buy from you, and what actually drives profit in your business. The more you can focus on these two in your activities the better you'll do.

Easygroupbuys.com

CHAPTER 7

CONVERSION VELOCITY

Easygroupbuys.com

Let's say you were given two choices.

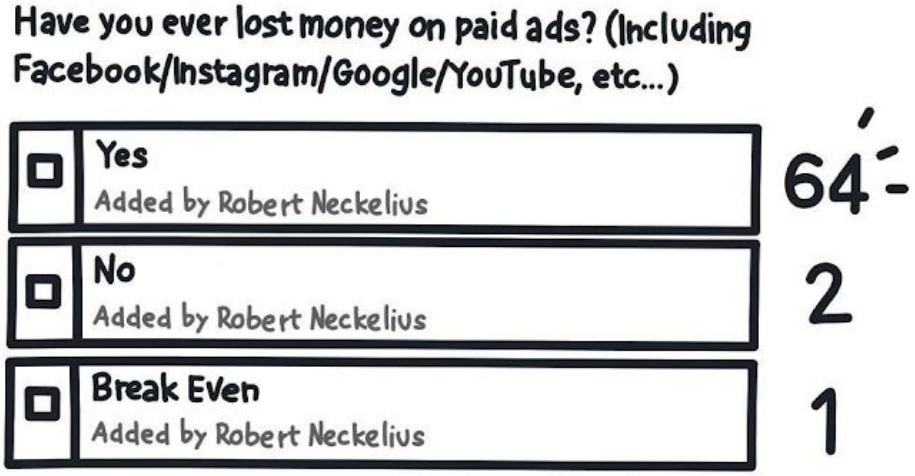
Choice #1 - you spend $100 on advertising everyday for 7 days ($700 total), then you look at the data to find out what happened. Did you make your money back? Did you profit? Did you lose all of it?

Choice #2 - you spend $100 on advertising in 1 day ($100 total), and find out what happened on the same day.

Which would you pick? The answer is simple, you'd pick the lower investment with faster feedback. And that's the whole point of this chapter, and a big reason why our model works. It minimizes the emotional rollercoaster that gets in the way of people spending money on advertising profitably by requiring less investment and faster feedback.

The topic of conversion velocity is especially important for those of you who ever tried to sell a $1,000+ product with a webinar using paid advertising, and didn't get any traction (I'm one of them). This concept is simple in theory but it's more powerful than you'd think when it actually plays out in the real world.

We posted a poll in our Facebook group to see how many people lost money on Facebook ads, here's what we found out:



Most people lose money on Facebook ads, and although this isn't the only reason, conversion velocity is a big factor why this is the case. When you're spending money on advertising to try and sell your product, it is wise to allocate some multiple (usually 2-5x) of the price of your product for testing the advertising campaign in order to properly assess its effectiveness.

Now if you're selling a $997 online course with a webinar, you should expect to invest $2-5,000 in testing before you have any real data of statistical significance to analyze and optimize. Which is all good, until you realize that that's actually a lot of money to put into something you don't know will work or not.

When I was first testing my webinars I put a $100 budget per day. This was scary territory, because I didn't know what I was doing.

- ➔ Day 1, got a few leads, no buyers.
- ➔ Day 2, few more leads, no buyers,
- ➔ Day 3, few more leads, no buyers. At this point massive anxiety started to kick in. I started asking myself "Is this thing going to work? I've spent $300 with nothing to show for it."
- ➔ Day 4, more leads, no buyers, I pulled the plug and never tested the webinar again.

This is the reality for most people. Given the high price point of the product it requires a significant budget, time, and cool nerves to actually give it a chance. Most of us don't have that

combination. Because not only do you have to be able to put up the money, you also have to be able to know what to do next. Meaning: there's pretty much a zero percent chance that your webinar will perform the way you want it to, so do you know what to do about that? Do you know how to diagnose and fix the problems? Most people don't.

When I finished my first book, the 2 Hour Agency, I put up 1 ad on Facebook, with a $25 budget and I made 3 sales, and turned a profit on the first day. You can imagine I felt a little bit more optimistic about those results. There was a little bit more data to work with and try to optimize there. The feedback cycle was much faster because of the lower price of the product. But most importantly, I wasn't shooting in the dark the same way that I was with the webinar. I was spending just a small amount of money and seeing money come in the very same day. This is a bigger deal than you might think once you start to factor in the emotional rollercoaster that most people experience when advertising on a budget. That rollercoaster completely screws up most people's ability to make wise decisions. For example: I gave up on my webinar on day 4 because of emotions. If I knew how to diagnose the problem and fix it, I may have been able to save it. But I didn't so I just pulled the plug.

With our book funnel the conversion velocity allows us to take on much less risk (lower daily budget) and get much faster data (sales in this case) than a webinar selling a $997 course. So rather than needing a $100 budget for 20-50 days to find out whether my webinar works or not, I can put a $100 budget and find out in a few hours whether there's any potential or not.

Easygroupbuys.com

If my book and sales page is bad, I'll probably make 1 sale, if it's good, I might make 10. Either way, day 1 and $100 invested, I'm going to know a lot more than when I spend $100 selling a $997 product.

Chances are if you can't sell a book with $100 ad spend it's not going to do very well (assuming you took the time to create a book that solves a real problem, and properly tried to sell it with a long form sales page). This is huge.

This speed also allows us to optimize faster. Sales pages, checkout pages, upsells, strategy calls, and so on can all be optimized faster because we are getting much more data. You need significant data that you can work with in order to make decisions. If we pay $4 per click on Facebook then we'll have 100 website visitors for $400. We can start to see the data take shape. If you have a webinar paying $10 per lead, and 80% of the leads actually watch ANY part of the webinar, then you will need to spend $12.50 for each viewer. That's $1,250 for 100 viewers, or 300% more. So you have data coming in 3X slower which makes it that much slower to optimize.

CHAPTER FAQ

What makes a good ad?
The only thing that determines whether an ad is good or not is the result it produces. If it is bringing you customers that you want at more or less break even, the ad is doing its job.

I don't want to advertise, do I have to?
You can try to sell your products organically but you will not be in control of your client acquisition, and you will severely limit your potential upside. We understand advertising means you have to take on risk, but if done right you can start out with as little as $25 per day, so the risk is minimal.

CHAPTER SUMMARY

Selling a low dollar product requires significantly lower advertising spend to generate sales. For this reason you're able to find out VERY quickly with VERY low risk whether your product has any legs or not. The feedback cycle is compressed, which makes it a lot easier to work with. Contrast this with a webinar selling a $997 course and you're looking at spending $2,000 at a minimum in order to actually test the webinar. A higher velocity of sales makes your client acquisition process a lot faster and easier on the nerves, not to mention all the buyer data it feeds the ad network which helps them go find more buyers for you.

Now, if you had a million dollars cash in the bank and you wanted to do a $997 webinar, then simply putting a $2-5,000 daily budget in order to get the data you need in 1 day would

CHAPTER 8

A MOBILE FIRST WORLD

Easygmpubguys.com

Smartphones are outselling computers by a 5 to 1 ratio. We're on our phones constantly, and this is an opportunity most are not fully taking advantage of.

When it comes to making a purchase we tend to switch devices based on the price tag of the purchase. The bigger the purchase the bigger the deal is to us. I don't know about you but

the most expensive thing I ever bought from my phone was in the $100 range. When I bought a $997 online course a few years ago I went over to my computer where I felt more in control, and I was able to open a bunch of tabs to do some research on the course creator and that kind of stuff. It's hard to do due diligence on your phone, so I automatically am drawn to the laptop as soon as the price of the product I'm interested in exceeds around $100-200.

We didn't really think about this until we did a little price test on our 2 Hour Agency book. We initially sold the book for $37 and then switched over to a $5.60 price tag. When my partner Alen went over our sales data with an expert he pointed out something neither of us really noticed until then. That seemingly small change in price had a drastic impact on the breakdown of what devices people bought our book from.

At the $37 price point 36% of all purchases came from a smartphone and 62% came from a computer.
At the $5 price point 52% of all purchases came from a smartphone and 47% came from a computer.

Easygroupbuys.com

We increased mobile purchases by 44% by that little price change. So when you start comparing $5 products to $997 products you can imagine the spread between smartphone and desktop simply getting bigger and bigger.

Now if you start taking the 5 to 1 ratio I mentioned above into account you start realizing that the smartphone audience is a 5x bigger market to sell to than the computer based market, and as we're going to discuss later on we're not really concerned with making a profit here, all we're doing is harvesting relationships. So the 5x bigger market is where we want to start out because that's where we can find the most amount of customers, we bring them into our world and start a relationship with them. As we bring them value and they continue to like and trust us, they'll be interested in making other purchases, at which point we'll be moving them over to other devices such as the computer, the phone, or even a face to face meeting (remember those?) for even higher priced products.

Easygroupbuys.com

Different price tags warrant different mediums for the transaction to take place. The smartphone, the computer, the phone call, and the in person meeting all have their place, and since initially all we want to do is to generate as many customers as possible, the product has to be smartphone purchase friendly.

Easygroupbuys.com

CHAPTER FAQ

Is it always $5? Is that the best price?
There is no hard rule for what your pricing should be. We are giving you a framework and a new approach of asking for much less than the value that you give. Ultimately only testing different price points would tell you the best answer because every market is different. But in general we aim for $5 - $10 for the core product.

What do you mean by "starting relationships" with customers?
We are not concerned with making a profit on the first transaction with our customers. We rather look at it as starting a relationship, which means we get their contact information, and we start to give them more value through our products, interacting with us, and our team, and so on. This is the goal of our first transaction, the profit comes later.

CHAPTER SUMMARY

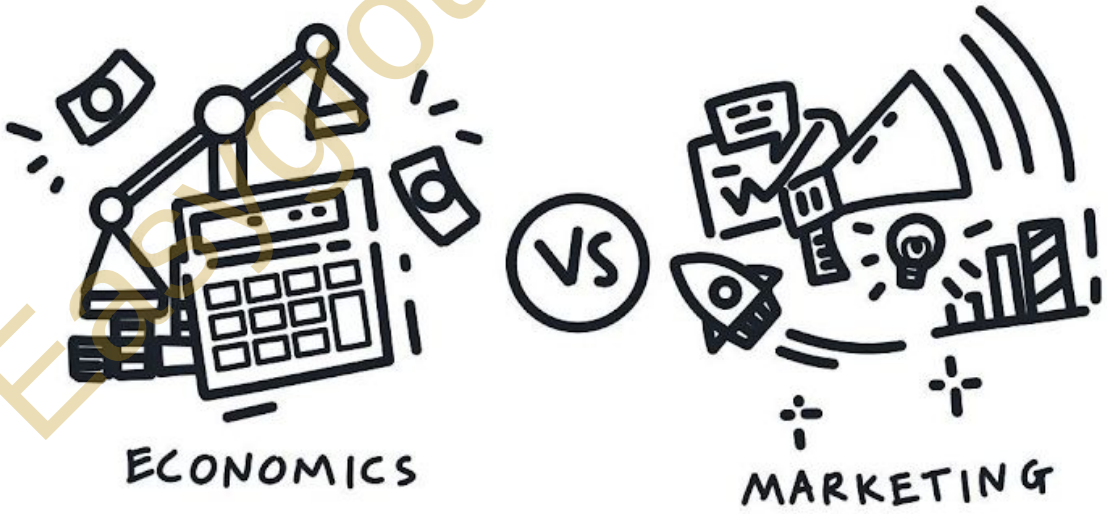
Ignoring the mobile market by selling products that are simply not "mobile" decisions is a big mistake. There are 5 times more smartphones sold than computers and since all we're doing on this first purchase is to start the relationship we're not really concerned with how big the deal itself is. All that matters is that we're able to get a lot of new customers every single day and as we build a stronger relationship with them through our content, and increase their awareness, we transition to other devices as the conversion device.

Easygroupbuys.com

If your lowest priced product is $1,000 you've had a lot of smartphone users that were interested but experienced enough friction between the price of the product and the device they were using during the time of the attempted conversion for the sale to never occur. Now that opportunity is gone.

CHAPTER 9

COMPETE ON ECONOMICS, NOT MARKETING



Economics is being able to pay more than others to acquire a customer while not losing money at scale. A lot of people argue

Easygoupbuys.com

against this because they have a vested interest in some other statement being true such as:

- ➔ You need better ads
- ➔ You need better copywriting
- ➔ You need a better website
- ➔ You need better graphics
- ➔ You need a better video
- ➔ You need better photos
- ➔ And so on...

But those things only bring marginal returns. There's only so many ways you can make sexy claims to your market, there's only so many ways you can give your ads a bump, there's only so many conversion points you can improve, but your economics can be manipulated a lot. Instead of all this we try to alter the numbers. If we are able to pay $50 to acquire a customer, how can we make it so we are able to afford paying $100 to acquire a customer?

Everyone is trying to figure out how to spend less, we try to figure out how we can afford to pay more.

Eventually your market is going to force you to pay more anyway due to competition and rising ad costs, so figuring this out is a skill set that will serve you forever. The great deception of

Easygroupbuys.com

our time propagated by marketers (for profit) is the idea that marketing is the end all be all of selling online, and we're here to tell you that it's not and that if you focus only on marketing - you're probably going to lose in the long run. **This is the most important lesson in this entire book.** If you understand this chapter you'll be able to start and scale your business to unthinkable levels.

While Gillette and every other razor producer was competing by adding more blades to their razors, Dollar Shave Club entered the market with a different business model, instead of a different marketing angle. They didn't want to rely on you yourself arriving at the decision to buy new razors, instead they came up with a model that would allow them to attract you with a "value vehicle product" and then get you to buy more expensive products using a recurring model, effectively competing on economics. They changed their numbers.

While everyone else was selling razor blades for $10+ and competing on marketing, Dollar Shave Club sold them for $1, and got people to pay every single month on subscription. The pitch was fantastic: get a new razorblade shipped to your door every month, for just $1. This is the value vehicle product. Once you purchase the $1 offer there's all kinds of add ons and upsells. More blades. Better blades. Shaving cream. Lotions. And so on. This is economics in action. Their model allowed them to run paid advertising on social media to acquire $1 buyers, and since people were upgrading their orders, and being billed every single month, they didn't need to make a profit on that initial sale.

Easygroupbuys.com

So while Gillette was trying to top their competitors by adding 5 blades (5 blades is so much better than 4 right?) Dollar Shave Club came in and competed on economics instead of the number of blades (marketing).

Ultimately Unilever picked up Dollar Shave Club for $1,000,000,000 cash. Not bad. They were able to enter a market with behemoths and build a business that sold for 1 billion dollars, by competing on economics, which they did by using a different business model than their competitors, and that allowed them to run paid advertising which helped them get exposure. They also had one of their ads go viral which certainly helped, but even if you take that away from them, there's a really good chance they would have seen similar success in the long run because of their economics.

If you look at the market we're in, people using the webinar model in our space were competing on different features and benefits, we started selling books which allowed us to acquire customers for free. By the time we pitch our back end high ticket products we've already absorbed the acquisition cost. It'd be like getting people to watch your webinar for free, instead of paying for leads.

With this understanding of economics you realize that it doesn't matter how competitive the landscape is, as long as you're able to improve your economics you can always run a profitable business, as long as you figure out your numbers. You can't win with bad math.

Gillette continued to increase the number of blades through the years with the hopes that it would bring in more

Easygroupbuys.com

customers. Dollar Shave Club had a different strategy. Instead of focusing on marketing they tried to increase their economics by adding upsells, cross sells, and so on, allowing them to sell their products at a cheaper price than Gillette, acquiring customers in a market that was assumed to be impenetrable.

Let's illustrate this concept. Let's say it's early internet days and advertising costs are very low. Let's also assume you are selling a digital product, so the cost to deliver is $0. You sell a $5 product, and it costs you $4 in advertising to make a sale, which gives you $1 in profit per sale.

Then competition and ad costs increase so you go from $1 profit per sale to -$2 loss per sale (cost per sale went up from $4 to $7)

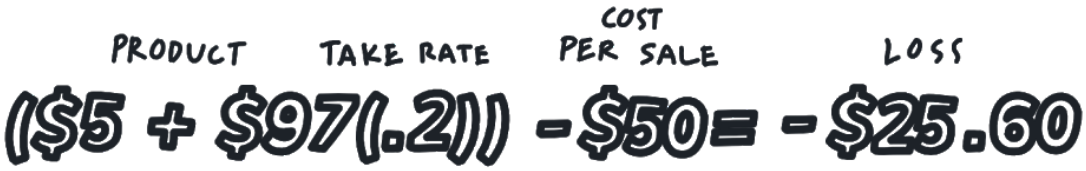
How do you fix this? Do you improve your marketing? Or do you add an upsell to increase your average order value? Correct, add the upsell. Your competition is going to be focused on improving their marketing.

Easygroupbuys.com

So now you have a $5 product and a $97 product that you pitch all buyers. 20% take it so where your average order value used to be just $5, it now goes to $24.40

At $7 cost per sale, and assuming no cost to deliver the product, you're looking at $24.40 - 7 = $17.40 profit per sale.

Then, competition enters the market and will copy your marketing, but they can't copy what they can't see - which is your economics, and ad cost further increases through the years and before you know it each $24.40 sale is costing you $50. Now you are losing $25.60 for every sale you're making.



Again, do we "add more blades to the razor", or do we figure out how to further bring value to your customers, and charge them for it? So now we decide let's add a $997 product on top of all this, and let's say we're able to convert 1% of customers to buy that.

You now get an average order of $34.37. We're still losing -$15.63 because the cost per sale is still at $50. What if we're able to make that $997 product a $5,000 consulting program instead. Conversion rates at 1% are still achievable, but it'll require more hands-on attention from us, but we have no choice, so instead of $34.37 AOV we get $74.40 average.

Since it was costing us $50 to acquire a customer but we're making $74.40 on average we're back to profitability at $24.40 profit per sale.

Ideally you should follow our "10x Factor Of Scaling" rule. It means that you should aim to have an average order value that is 10x higher than the cost of your core product. Meaning if you sell a $5 book you should have upsells and cross sells that take each $5 purchase to $50 on average. This is difficult, but if you're able to do it you'll be able to scale your advertising on pretty much any ad network.

This isn't some hypothetical scenario we're playing with here, this is literally what happens when you use economics to compete, and you can either ignore it or use it. Now, this

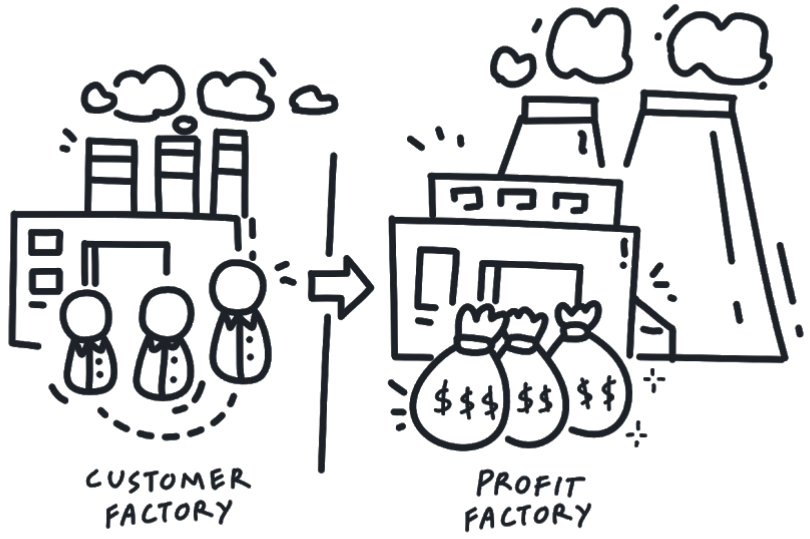
illustration above is just an example, and if you are selling products that are far more expensive than the example above don't expect those same numbers to be true for your business. Meaning: if you sell a $10,000 service you probably won't be getting new customers for $4 in advertising cost.

When your business is not making enough money, look at your economics first, not your marketing. Chances are all you need to do is add another product to your back end, and find a buyer for it.

As competition and ad cost continue to rise you just continue down this road, and you start adding $25,000+ services (in markets where it makes sense). This as well as recurring-based products will allow you to thrive in any market based on the economics of your business, not marketing.

Once you make this work and start stacking $5,000+ sales it doesn't take many to get to $10,000-$30,000 a day. And if you're in the B2C market where those high price points are not feasible then simply put your focus on recurring products and referring your customers to partners and affiliated businesses for extra revenue.

ACQUISITION FIRST, PROFIT LATER



How do you compete with free? How do you build a better Google that's free? We talked about this, but let's go over it again.

How do you build a better social network than Facebook that's free? How do you build a better image sharing platform than Instagram that's free? How do you compete with a business that doesn't need to make a profit on their core product?

You can't, and that is what we're discussing in this chapter: how to architect your business to be wildly profitable while not having to make a profit on most of your products and services.

Things are different now than they used to be. We're in an era where step 1 is to acquire the attention, and step 2 is to monetize it. Back in the day you could just skip step 1 and go straight for the sale. Barriers to entry were much higher in all

markets, making it so far fewer companies existed in the first place. Here's how we use it and how it works for you:

If you can acquire customers by breaking even on the front end and turning a massive profit on the back end, better than your competitors, you'll win.

A big part of economics is the realization that you cannot rely on just selling 1 product. If you want your business to grow fast there's a simple way to achieve that: advertising. However, if you're going to advertise you will need to spend money. Where's that money coming from? We create products that are specifically made to be advertised, bring in customers, and make us zero profit whatsoever. It happens that we do make a profit, but we don't have to, not on our front end products. People are not used to creating products that are not meant to make any money.

As you know by now, we split the responsibility of acquiring customers and turning a profit between 2 (or more) products, as opposed to having 1 product carry both responsibilities.

Again, take a webinar for example, most webinars at the time of writing this sell a $997 product, and that's all they sell. So you got 100 people watching and 1 person buys the $997 product.

That webinar is responsible for both client acquisition and profitability, which makes it harder and harder to actually turn a profit. How do you fix this? You should know by now since you understand economics.

You either place a lower dollar product in front of the $997 one, such as a book, effectively allowing you to get people to

watch that webinar for free, and any $997 sales being 100% profit.

Or you put a higher priced product after the $997 product, such as a $5k - $10k service, and you allow the webinar and $997 product to be your client acquisition machine, and your $5k - $10k product to be the money maker. Or ideally, you do both of those.

CHAPTER FAQ

I want to create a successful front end product, where do I start?
Your front end products are ultimately rooted in the primary desire of your customer. What is it they want? If you don't know you'll find the answer by researching the top products being sold in that market now, and speaking with people. Chances are your best bet is to solve the same problem that the top products are solving, but doing it with a disruptive idea, as in: a different way than everyone else does.

If I focus on economics, does it mean I can ignore marketing?
Absolutely not. You need both, but as far as optimizing your business to do better goes, the first thing to fix is your economics. Marketing is still an essential component of getting the most out of your economics. Just because you have products to sell doesn't mean that they will, that's where marketing comes in. So you have potential economics (products on offer) and actual realized economics (products you actually sell), and marketing is the bridge between the two.

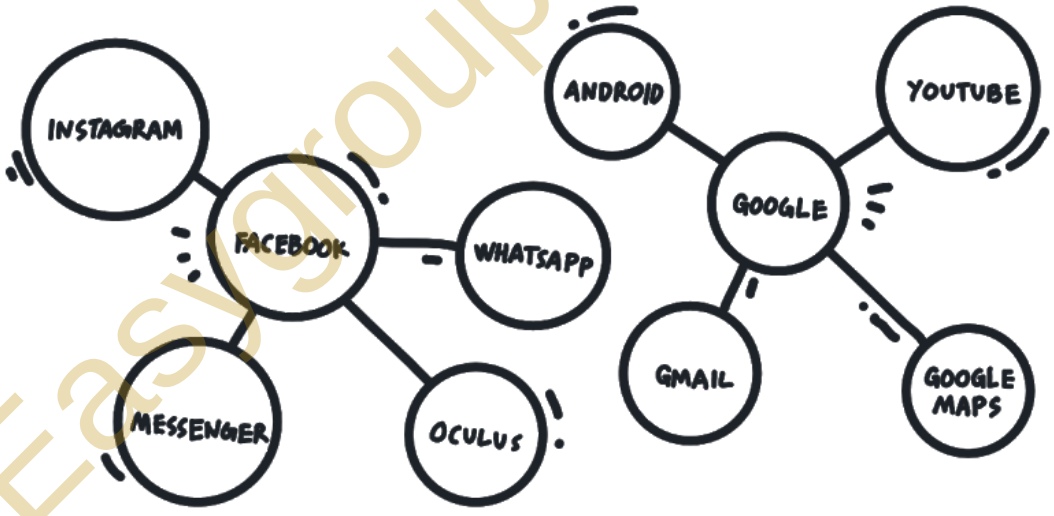
CHAPTER SUMMARY

You should always compete on economics, not marketing. Economics allows you to stay profitable regardless of how fast competition and advertising costs increase, and it's the reason why companies like Dollar Shave Club can enter well established industries and compete with companies like Gillette, and

Easygroupbuys.com

CHAPTER 10

DOMINATING FACEBOOK, INSTAGRAM, GOOGLE & YOUTUBE ADS



Easygroupbuys.com

Every aspect of a business has a function and marketing is no different. Marketing's function in the business is to create an opportunity for the sale to take place. And when it comes to

marketing, there are two aspects of it: organic and paid marketing.

Advertising falls under paid marketing, because in order to advertise, we have to rent out space on other peoples digital properties, which we have to pay for. Now, the reason we bring this up is because there seems to be massive confusion as to what advertising really is and this confusion goes back to the beginning of advertising as we know it.

On an evening in May in 1905 John E. Kennedy (a relatively unknown copywriter at the time) walked into the lobby of Lord & Thomas advertising agency and sent up a letter to the executives that said:

“I am in the saloon downstairs. I can tell you what advertising is. I know you don’t know. It will mean much to me to have you know what it is and it will mean much to you. If you wish to know what advertising is, send the word “yes” down by the bell boy. Signed - John E. Kennedy.

That note was destined for the trash can because none of the senior partners were there, but Albert Lesker, one of the Junior partners luckily caught the note and went to meet John.

The two men met and that’s when advertising changed forever as it was defined for the first time with John E Kennedy stating just three words: "Salesmanship-In-Print”. Out of those three words, an entire industry evolved and we are all descendants of that thought, but sadly, many have forgotten that thought. Even today there’s lots of confusion about what advertising is. If you go to Madison Avenue and talk to large NYC advertising agency executives you’ll ironically find out that many

of them are actually pretty clueless about what advertising is. Or rather, we should say they're willfully ignorant, because as long as you don't properly track dollars going out vs. dollars coming in, you can fabricate the story in between and use those very advertising skills on your clients to charge them absurd amounts of money for your definition of "advertising". This is quite a challenging statement, but hear us out. This became really clear to us when we saw the trailer for the company Masterclass' latest course on advertising. They asked a 30 year supposed advertising veteran what is advertising and his answer was:

"Advertising is the business of rejection, you have to expect it everyday. Advertising is vandalism, it's loud, in your face, and it's still there the next day."

That is not what advertising is. That is what the advertising business is. These agencies are creative agencies disguised as advertisers, and the way you know this is because they care about awards and ability to charge for abstract ideas that are not measured properly. The reason they care about awards is because that's the springboard they use to land new clients and new clients who can't measure your performance mean big paydays.

So at this point of our argument you should ask yourself: if they're so bad at advertising how come they're still in business? Great question. Here's the thing:

Do you remember earlier how we talked about different awareness levels in business? If someone is completely unaware about a problem they have, much less what products solve that problem it is very difficult to make a sale for that product.

Easygroupbuys.com

On the contrary, it is not difficult to make a sale for Budweiser because everyone already knows their product, all you have to do is remind people about it, which any ad will accomplish.

Madison Avenue agencies are so expensive that only established brands can afford to work with them, and so they're effectively given lay ups where they can actually afford to be creative, because again, all they need to accomplish is top of mind awareness, which any type of ad will do. They don't need to make the prospect aware about a problem they have, the solutions, and so on. All they need to do is say "hey remember us, we exist". Then it just becomes a game of creativity and going viral. This is a game you can't afford if you're a small business, but you can if you are a big corporation.

Now, our goal here is not to knock Madison Avenue ad agencies, only to make you realize that if you approach and create ads the way that they do, for your small business, it will not work.

Most people don't know your business, and hopefully you don't give a shit about advertising awards because if you really think about it: what should decide the winner of an advertising award is Return On Investment, nothing else. Advertising is about generating sales, so that is what you should measure. If you measure anything other than that then you are talking about creativity, not advertising.

Now, when it comes to running a successful online business, you're not going to be competing with other people. Rather, you're going to be competing with advertising networks -

Easygroupbuys.com

which are the great barrier between you and all of the customers / clients that you could ever want.

The ad networks are the great filters of success online. Once you can get through this filter, the battle is halfway done. So let's talk about what it really takes to get through that filter and win.

Successfully running ads on Facebook and the other social media networks require that you have special magical knowledge. This is what Facebook ad agencies want you to believe, but it is not the truth.

The truth? The magic is in the algorithms that go out and find people similar to the other people that buy your stuff, not the person uploading the ads.

There is this idea floating around that a select few "know how the algorithms work" but in reality only the people who developed those algorithms actually know how they work, and we're pretty sure that they're under an ironclad NDA that prevents them from ever talking about it. So we can safely assume that at this point in time - everyone is just guessing.

Hear me out you really need to understand this. You do not need magic skills to do well running ads on Facebook. Sure, good copywriting and understanding what creatives capture attention helps, but the stuff that really moves the needle on these platforms is simply testing new ad creatives and trimming the fat (disabling losing ads). Of course, the quality of the product plays a big role here as well, we are assuming that's taken care of.

Easygroupbuys.com

We hired 7 world class agencies that cost an arm and a leg to run our ads and every single time we were able to beat them in performance with our own advertising efforts.

Social media ad networks are getting smarter and smarter by the day. The way they work is they all build up profiles of us users, in fact Google even publishes the profile they have you. Then they use this data to find similar people in order to show them relevant ads.

If you're logged into Google, you can actually see how they have categorized you. Ads you see are based on this profile they've built up on you.

Visit this to see Google's profile of you -> https://adssettings.google.com/authenticated

Our sales page converted at 15% to cold traffic meaning 1 out of 6 visitors would actually purchase our product. Sure, we'll take some of that credit after spending weeks on building out our site, having Alen write some of the strongest copywriting in the world, and so on. But the truth is that the Facebook algorithm gets a bunch of the credit too as they're ridiculously good at going out there and finding more similar people that are potentially interested in what we have to sell based on our previous buyer's data.

This is why you do not need magic skills to win at Facebook ads, you need an offer with strong economics, in the right market with the right disruptive idea paired with the right superpower, and you need to test a lot of ad creatives. Choosing

ad targeting and setting up campaign structure is effectively becoming less and less important as no matter what you tell Facebook, their algorithm will still make a better decision for you regarding who to display your ads to, and so the weight of your ad performance is increasingly relying on the ad creative and the product you're selling.

What you have to realize is that it's in Facebooks and Google's BEST interest to make you money. Why? Because the more money you make, the more money you're going to spend with them. So, everything they do is geared toward that end goal.

If you have an offer with strong economics and combine it with mediocre advertising you will crush it. If you have the best advertising in the world selling a low dollar offer with no upsells or other products for sale in a competitive market, it won't matter. You will lose.

Advertising can not fix your business, only amplify your results.

Good results can become great results. Bad results become catastrophic results. Think back to the "Pipe Dream" graphic above. If you had a piping system that wasn't producing happy customers at the end of it, but rather had broken pipes spraying slime everywhere, that's exactly what you'd get more of if you added paid advertising to your traffic sources list.

Easygroupbuys.com

Also you need to understand that there are three fundamental areas of running ads. There's the creative, mechanical and strategic part.

Mechanical is how to create ad campaigns, ad sets, ads, and naming conventions. This is the stuff that most people think makes a good advertiser, but this is really the simple stuff anyone can learn on a weekend using nothing more than free training you'll find on YouTube (yes it's that easy).

Creative is the creation of the ads, this requires a different skill, but still, this is easy to come by. And 99% of this comes from the fact that all of your creatives should come from the marketing materials used on your sales pages. So if your offer is made right, then this should be taken care of by the time you are launching ads.

Strategic is the fundamental understanding of advertising, awareness levels, market sophistication, contextual ad network differences, and so on. This is the stuff that takes years to learn, and the only way to learn it is to either spend a lot of money doing it, winning and losing on the way, or learn it from someone who's done this.

We cover advertising more in depth below in the How To Optimize Your Advertising chapter, and furthermore we have a book and video course dedicated to advertising alone which you can read more about here:

https://automaticclients.com/converting-ads

Let's also briefly discuss the different social media ad networks. Every ad network exists for a reason, and the reason for its existence is the reason why people use the network.

FACEBOOK

Facebook is a mix of B2C and B2B people. Some log into as a private person looking to engage with friends and family, and have no business purpose on Facebook at all, some only use Facebook for business purposes. This generally makes it a good starting point for most offers, assuming that they're not against FB policy, such as gambling.

Facebook is also a good choice for many as the primary ad network due to the fact that you can start out with as little as $20 / day and still see results using the Ascension model. In fact, many of our clients start out at $20 a day and scale up from there.

INSTAGRAM

Instagram is similar to Facebook but skewed more towards people using it for personal use vs. business. Photos and videos are obviously the focus here, and Instagram stories has become a really big hit.

GOOGLE

Display network is one of the biggest ad networks on the internet with about 2 million websites putting up display ads, according to Google. If you're able to make it work you stand to have a very nice campaign that you generally don't need to touch for years. Google adwords is very high intent, and very easy to convert traffic from. For this reason it has become very expensive, and so sadly most of us will never be able to be profitable from adwords apart from branded searches such as your name, your company name, or the name of your product.

We generally use Google's network as the secondary network to Facebook for retargeting, then as we scale we move to Google as the co-primary network to Facebook. Depending on the niche.

YOUTUBE

YouTube advertising has seen a big surge in the last few years, especially as Facebook gets increasingly trigger happy about booting advertisers off their platform. YouTube offers in many ways the same audience, but YouTube's policies are less conservative and you can get away with slightly more claims and so on.

YouTube has a very high intent search driven advertising opportunity the same way that Google Adwords does, and there's also the ability to do more of "interruption" type marketing where

Easygroupbuys.com

you just target people based on the person, or the video they watch, as opposed to the keywords they search for.

The downside to YouTube is that you can effectively only run video ads which tend to require more work, but it is a great platform to get onto.

LINKEDIN

LinkedIn is an interesting one because the audience is generally very high value for B2B companies compared to the other platforms, but of course it comes at a price. Advertising on LinkedIn is expensive, but if your economics allow it could be an absolute gold mine.

CHAPTER FAQ

Where should I start advertising?
It depends on your market. Without knowing more we typically say to look into Facebook first, and then move over to YouTube and Google as a secondary platform.

How much data do I need to collect to make my campaigns successful?
There's no one exact answer to this. You can Google a sample size calculator if you want to get specific, but to keep things simple we'd recommend generating 100 clicks for some level of statistical significance before drawing conclusions about an ad.

CHAPTER SUMMARY

If you have a better economic engine than everybody else in that ad network, regardless of the network, you're going to dominate with your advertising. This is important to remember. You're not competing against other people, you're competing against advertising networks, which are the ultimate gatekeepers that stand between you and as many customers as you want. Running ads on Facebook and the other networks is getting increasingly easier from a mechanical standpoint with the constant development of their algorithms. On the flip side this causes more and more people to advertise on the platform, driving up prices due to supply and demand, which ultimately makes it very difficult to get your numbers to check out. The thing that moves

Easygroupbuys.com

the needle the most is simply having an offer with strong economics and testing a lot of different ad creatives, not your ability to choose targeting and setting up campaign structure.

Also, using different ad creatives for different segments of your market will help. For the longest time I thought Facebook advertising was some kind of magic skill, but the magic is in the algorithms and you creating great economics in your business, not the person uploading ads.

Easygroupbuys.com

CHAPTER 11

CRITICAL CONVERSION THEORIES

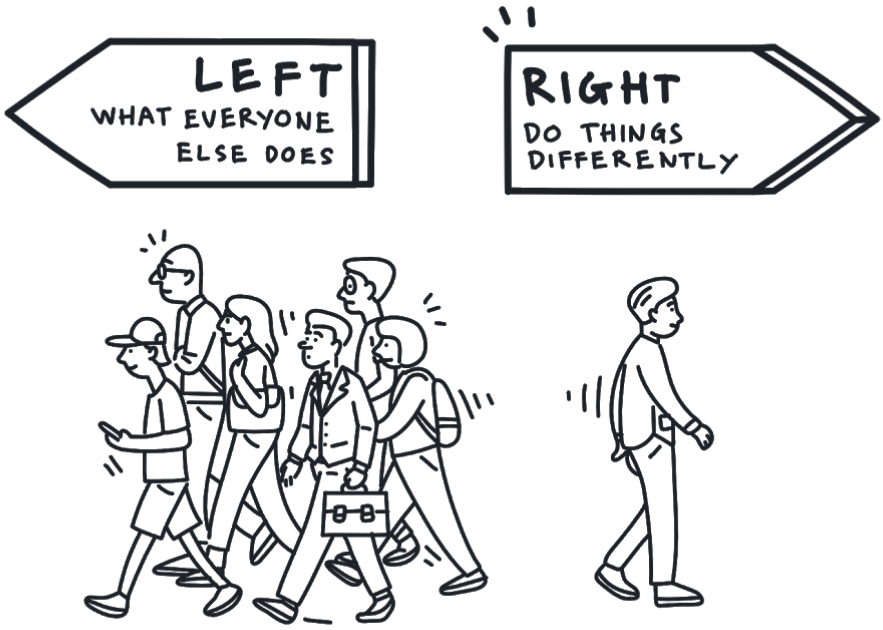
Easygroupbuys.com

This is about scaling macros. This is not a chapter on how to split test a green order button vs. a red order button to give your conversion rate a tiny bump. Split testing is a useful tool, but usually only brings marginal increases. That's about scaling micros.

This is more about persuasion psychology on a larger scale. It will make you understand why you pay attention to some people, and zero to others. It will make you realize why you buy

certain products, and others can't catch your attention for a second. It'll make you a much more powerful marketer that can attract attention, and harness it to the point of conversion.

DISRUPTIVE IDEAS



When it comes to getting someone from just scrolling around social media to actually opening up their wallet and buying something from you, there's a lot that goes into it. Most businesses just keep pitching the same thing that everybody else is pitching, which doesn't really move anyone. This is why one of the ingredients to a successful offer is what we call the "disruptive idea".

When we launched the 2 Hour Agency it was selling like nothing I'd ever seen before, and one of the main reasons for that is because it was offering a solution that was completely opposite

of what everyone else was offering. We said charge less, and you'll make more. It was counterintuitive, and true. Of course, you can't assume that just doing the opposite of what everyone else is doing is enough, it also has to work. My disruptive idea worked because it was actually what saved my business. The average agency owner gets clients by prospecting, doing sales calls, going to meetings, sending proposals, and following up. It's a slow and painful process that everyone hates. What I do is rather than trying to sell some high ticket agency service through that process, I come up with a low ticket standardized service that I can sell straight off my website, and automate the client acquisition. This disruptive idea alone is enough to get people to buy my book because it helps them solve a painful problem in a totally different way than they'd heard before.

Think about it this way: every market has some standard way of doing things, and the disruptive idea challenges that standard by doing it differently. Tesla was disruptive because it introduced an all electric car in a market where all cars ran on gas / diesel.

iPhone disrupted the market by making a smartphone that was actually smart, where all their competitors either just had the ability to make calls, send texts, and play snake, or they attempted to create a smartphone, but it just wasn't very smart.

Netflix disrupted their own market by introducing on demand live streamed entertainment instead of going to a video rental store, or mailing DVDs to the old Netflix.

Now, we are not saying you have to invent the next Google, or Tesla, or Netflix. But your marketing efforts will pay

Easygroupbuys.com

off significantly more if you just have a disruptive approach to the problem your market is facing. Take us for example: everyone is doing webinars and selling $100 eBooks, we decide to give away thousands of dollars of value for $5. That's a disruptive approach to the problem of getting new customers.

For example, just the other day I was on a coaching call with our Automatic Clients students, and we were doing a sales page review with one of the guys. As he was taking us through the offer he said "most people don't want to hire an expert, they'd rather pay the newbie…" and continued to talk about his page.

I quickly interrupted him! "Hold on a second.. Most people don't want to hire the expert? Elaborate" I said. He goes "Sure. Well everyone assumes that experts are very expensive, and most people just don't have a lot of money to spend, so they'd rather hire someone who is starting out because they know they can afford it." Light bulbs went off in my head. "There's your disruptive idea, and book title" I said, and instantly we started gearing the marketing to lean into this idea more. In this case we had a disruptive idea completely counterintuitive to what you'd think on a surface level, but it makes sense when you think about it, and the bonus in this case is that this idea actually removes intimidation. It tells the market "look you are actually better off NOT being the expert", so this is a great disruptive idea. We'll help you come up with yours a little bit later in the implementation part of this book.

STRIP CLUB PERSUASION LESSONS

It was 10am on a Tuesday morning, and I was walking to my office after having been at the gym that morning. As I was walking through the Krakow Old Town I saw a familiar sight in my peripheral vision. A girl with a pink umbrella was approaching me, and so I started to think of an excuse that was going to allow me to continue with my day without having to deal with what was coming (I knew exactly what was coming). As the girl gets within speaking distance she delivers her pitch..

“Maybe strip club?”

I continued to walk and responded with “all good thanks” while thinking to myself “at 10am on a tuesday morning… good hustle.. I guess…” Any man that has walked around Old Town in Krakow, Poland alone knows this to be a common occurrence. In any case, let’s talk about what you can learn from this.

Advertising up until very recent years has always been a very blatant attempt at trying to sell something. This causes us to pick up our shield and think of ways to not have to deal with the ad, the same exact way I could see the strip club promoter in my peripheral vision and instantly start preparing for how best to reject her. If the ad is on TV we pick up our phone to kill time until it’s over. If it’s on YouTube we’re instantly hovering on the “skip” button, waiting for the 5 seconds to pass. If it’s on Facebook we just keep scrolling.

When you are blatantly selling something, you will have to overcome the shield that your prospects carry. But here's the thing: if they don't know it's an ad, there's no shield. This is exactly why you see content creators who only focus on creating content build up a really loyal audience, and then when they launch some sort of product it sells out immediately. Their followers never had a shield up because they just got value out of the content creator, so when they finally pitch something the audience doesn't know that a pitch is coming, and also they're in love with the creator, and can't wait to support them by buying their product because they gave value first. There are of course laws and regulations about paid advertisements and how viewers should be informed about what is an ad and what isn't. This shouldn't prevent you from providing value in your advertisements.

Another really interesting observation is that at the time of writing this my daughter is about 2 years old. She doesn't speak yet, but it's incredible how much she understands. Sometimes when we watch YouTube videos on the iPad an ad will come on, and within a split second she is huffing and puffing and pointing for me to hit the Skip ad button. She can identify an advertisement immediately. What's interesting is that there is this one ad which is disguised as the other cartoons that she watches, and she never realizes that it's an ad. No huffing and puffing, no asking me to hit the skip ad button. She consumes the video, but luckily she doesn't have her own credit card yet. This is where advertising is going in the future, but more importantly, this tells an important lesson about persuasion.

Easygroupbuys.com

If your ads are not bringing any value we're going to look away as soon as we possibly can. But if you can disguise your selling efforts with actual value, you're going to have a much easier time penetrating through all the noise. Don't get the wrong idea here. The word disguise may sound dirty, but this is the opposite of that. What we're saying is that blatant selling attempts will always be ignored, more so every year, and if you can figure out how to wrap your selling attempts with value, they'll be welcomed by your prospects, instead of rejected like a strip club promoter, or an obvious YouTube ad.

Once you have their attention, the most effective way of persuading them is to get them to arrive at the conclusion you want, without you spelling it out for them.

If you go to lunch with someone you don't know well, and they're rude to the waitress, you conclude that they're not a good person, regardless of how they treat you. Nobody told you they were a bad person, it was your conclusion. If you see someone wearing a $100,000 watch you conclude that they're rich, nobody told you. If you see someone pick up trash that isn't theirs, you conclude that they're environmentally friendly. If you see someone giving money to a homeless person you might conclude that they have empathy. Once you make a conclusion on your

Easygroupbuys.com

own it is VERY powerful, and very hard to change. The same goes for your prospects. When you want someone to believe something, rather than telling them what to believe (ineffective), figure out how you can put them in a situation to arrive at the conclusion themself.

Also note that when you propose a "disruptive idea" as we discussed earlier--a new way of doing something, they conclude that you probably know other things that they don't know, and they'll want more of those ideas from you. You didn't come out and say "hey I'm really smart you should listen to everything I say". You demonstrated that you knew things they didn't by having the solution to their problem, which had them arriving at the conclusion that you might be helpful. They start thinking "if I just learned this thing from them, what else does this person know?" Offering someone a new perspective, or a new solution to a problem they're currently having, is extremely powerful and will move the needle much more than any technical split test you can come up with.

If possible your disruptive idea should be rooted in the "what business are you really in?" question that we discussed earlier. Meaning, if you figure out that the business you're really in is getting clients results, then your disruptive idea should be centered around that.

MARKET INTIMIDATION FACTORS

There are two intimidation factors taking place. External and internal. External is “I don’t believe that will work”, the internal, and more important one is “I don’t believe I can do this”.

Intimidating your prospects is something you have to be very careful with. When someone is going through the emotional and logical process of convincing themselves to purchase something from you it’s crucial not to blow the sale by accidental intimidation.

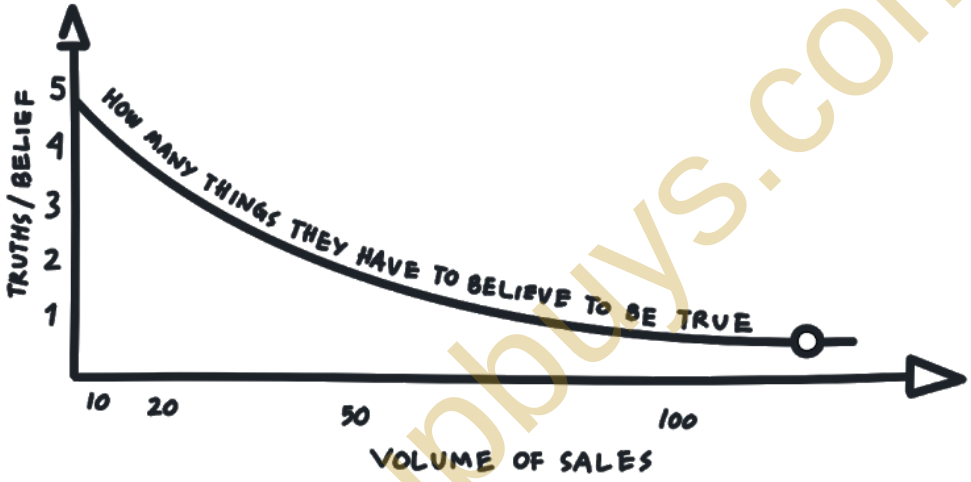
One of our Automatic Clients members, Alex, is in the survival market. He was selling a backpack generator, and it wasn’t going well. If you think about what needs to happen in order for them to make a purchase, it’s not surprising that the backpack wasn’t selling as well as Alex was hoping.

1. They have to be into survival idea
2. They have to think that the power is going to go out
3. They have to believe they can figure out how to use the backpack generator
4. They have to believe it’s good enough to do what it says

These things cause intimidation. There are 4 things that have to be true in order for them to jump at the opportunity when they see his ads. So my partner Alen asked Alex to send us some examples of other guys doing well in the market, and it turned out they’re all selling t-shirts. As you can imagine, all we have to

Easygroupbuys.com

accomplish with a t-shirt is put some kind of theme that they align with, and that's enough to get the sale. You don't need 4 things to be true anymore, only 1. They just need a t-shirt that allows them to show their identity, it honestly doesn't even have to look good.



How many things are you asking your visitors to believe, or how many things need to be true in order for them to make a purchase? If you get it down to 1 belief/truth you'll never have an intimidation problem with your offers anymore.

Easygroupbuys.com

PURCHASE ANXIETY

As people are getting closer to making a purchase on your website the doubt starts creeping in. What the fuck am I doing? Am I getting scammed? Is my data safe? Why are there extra charges showing? Is this website safe? What will my wife/husband say? How will I explain this to others? If it doesn't work will I look foolish? Can I get a refund? How do I do that? Can I really do this? Will I actually use this? Are these testimonials real? What if I have questions? What if I can't get support? Is there a phone number? You should answer every single one of these questions above for them. Remove the anxiety of the sale.

Years ago Alen ran an offer in the dating market, and his checkout page converted at just 8%. As he analyzed the checkout page it became clear to him that the people buying the product might have anxiety about being contacted after their purchase. After all, most of us don't really want to be contacted by the companies we buy things from, especially not when it's a sensitive

Easygroupbuys.com

topic. Alen added “No one will contact you” to the checkout page to mitigate this anxiety, and sure enough the conversion rate shot up to 35% from 8% instantly. Most of the buyers were married so that one line alone removed all the remaining purchase anxiety they had. It’s important to ask not only WHAT is creating that purchase anxiety, but also WHY, because that WHY will carry over into all other areas of your marketing and sales, and may need to be addressed continuously.

I recently went through one of the worst purchase experiences I’ve had in years. It’s a well known confusing software company that simply doesn’t get the concept of purchase anxiety.

- All their competitors offer a refund, they do not -> add anxiety
- In their sales copy it says you’re forced to buy an hour of consulting from them with the software tier you buy -> add anxiety
- The only way to cancel is to get on the phone with them -> add anxiety
- The only way to upgrade plan is to get on the phone with them -> add anxiety

When you’re forcing people to get on a sales call with you this is extra important. How can you remove as much anxiety as possible? How about letting them know the price before they even sign up for a call? Or how about letting them know that you won’t try to sell them anything if it’s a support call? These things

Easygroupbuys.com

would dramatically change the level of anxiety people would have before getting on a call with you. Consider every possible way that you are adding anxiety to the purchase and how you can mitigate it. Can you add a phone number to seem more reachable? Can you show more testimonials that prove it's not a scam? Can you offer a money back guarantee and instructions on how to get their refund? And so on...

DECISION FATIGUE

One of our students in the Automatic Clients program ran a similar offer to our 2 Hour Agency offer, in a different market. We both sold a book, we had the same upsells, and so on, just different markets. What was interesting was that our student was pulling almost 2X more money on the front end than we were.

Easygroupbuys.com

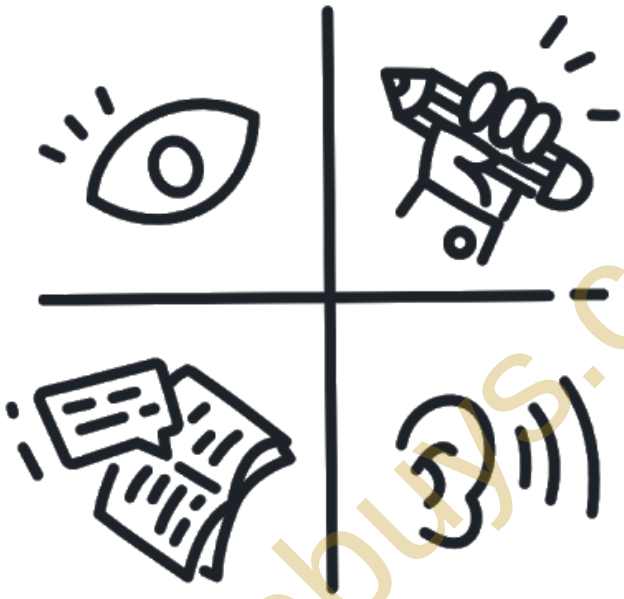
The reason why? Decision fatigue. Each time you ask customers to make a decision they have to take a sip from their daily cup of willpower. Each time they make a decision they get a little more fatigued, and if you overwhelm them it can seriously damage your results.

The difference in our order form pages was that we were asking our customers to make 3 decisions (audiobook, bump offer, etc), our student was only asking for 1 decision. Our theory is that by the time our customers got to see our first upsell they were already a bit fatigued, which affected our conversion rates, whereas our student's customers were still fresh and able to make buying decisions which resulted in him having almost 2x the conversion rate for his upsell, which again was a very similar product to ours.

If you can get someone to consume your sales message it will be the primary driver of conversions. This is another reason why webinar conversions are dying these days. The key is to focus on having them spend their limited willpower / attention on areas that have higher payoffs, such as buying an upsell that has $197 value vs buying an audiobook that has a $10 value. Sure you might get $10 out of that audiobook but lose 30% of people taking up that $197. The math always wins.

Ask yourself how you can minimize the amount of decisions your customer has to make, while maximizing your revenue on the sale.

COMMUNICATION CHANNELS



Another thing to consider is that as humans we fall into different buckets when it comes to being persuaded. Some of us need to do something to believe it, some of us just need to hear about it, some of us need to see it, and some of us need to read about it.

We all need different things to convince us that something is true. And only when we think that something is true do we take action on that truth.

In order to try to reach all different types of people, here are some ideas of things that help persuade people who prefer to:

- ➔ See something: seeing evidence such as testimonials, case studies, etc

Easygroupbuys.com

- ➔ Hear something: oral presentation, audiobook, podcast, or hearing from others
- ➔ Read something: reading a book, report, testimonial, social media post
- ➔ Do something: doing something yourself and seeing the result directly

Many people need a combination of channels. Once information enters through one of these channels it's going to be processed differently as well. The question here is what needs to happen with this information in order to convince someone to buy? The different ways of processing the information are:

- ➔ Number of examples: need to see X amount of testimonials, case studies, results, etc to be convinced
- ➔ Automatic: automatically convinced based on very little information
- ➔ Consistent: never completely convinced, and every day they need to be re-convinced
- ➔ Period of time: the information needs to marinate for a certain period of time in order to convince the person

A person may have a combination of these patterns, and again, most of us also need information through a combination of the different channels, so the best thing you can do is simply make sure that a) you are providing the information so that it can be consumed in different ways, and b) you provide the information consistently, over a period of time, and lots of it, in

order to convince as many people as possible from your target audience.

One of the reasons our offers tend to convert at 8-22% is because we include all of these channels in our marketing, while our competitors only use one.

INTERNAL VS. EXTERNAL DECISION MAKING

I recently did a sales call with a woman about joining our Automatic Clients program. Towards the end of the call she specifically asked me "when do you think I should join?" She also messaged other people in our program, and got on a call with one of them to ask about the program and get their feedback about joining. She is an external decision maker who looks to other people when it comes to decision making, and many people make decisions this way.

People are internal or external decision makers. An internal decision maker is going to take in information, run it through a subconscious checklist of theirs, and make a decision based on that. They don't want you to try to impose a decision on them. Both Alen and I are internal decision makers. When we get a salesman telling us why we should buy something it simply bounces off us, or turns us off. We ignore it. Our brains don't entertain the idea of taking someone else's advice about a purchase unless we specifically ask for it. We need to make the decision based on the information we have.

Easygroupbuys.com

An external decision maker is going to look to other people for the answer. They'll ask for advice and they'll be much more prone to take it whereas an internal decision maker can be turned off by being told what to decide. People can also have a combination of the two, and people can be external in one area of their life and internal in another. This is another thing to consider in your copywriting but also in your sales calls. Are you dealing with an internal or external decision maker? Should you tell them what to do or should you back off and let them decide on their own (with some guidance)?

This is why content is effective, it pushes internal decision makers towards making the decision to purchase something, but not because you told them to, it ends up being their idea as a result of getting value out of your content.

SYMBOLS OF CREDIBILITY

Whether you like it or not you're always subcommunicating your social and industry status. People judge books by their covers. They judge you based on what you wear, what watch you have, what's in the background of your videos, and so on. You can try to fight it, but we all do it, consciously or subconsciously.

When I see video ads of gurus in the "make money online" industry that are shot outside, while wearing a t-shirt and black earphones with a cable, they've already lost me because here's the list of judgments we are going to make in a split second (right or wrong is irrelevant):

- ➔ You're only shooting the video outside because you don't have enough money to pay for your own office, and you can't do it at home because there are other people there... So you're probably living in your mom's basement. You don't even have a home office... do you?
- ➔ You're dressed like a bum.. I wonder why?
- ➔ Your earphones are black... Can you not afford an iPhone?
- ➔ Can you not afford AirPods... or even better can you not afford a proper wireless microphone?
- ➔ How will you teach me to make money, if you can't do it for yourself?

We all make these kinds of judgments, and they'll impact your results heavily. So think about how to make it work in your favor instead. Every industry, every market has what we call "symbols of credibility". If you're a lawyer who graduated from Harvard law that diploma you got is a symbol you need people to

see, because it will help you land clients. If you're in the film industry and won an Oscar it shouldn't be hard to find out about it. It should be in your bio, in the background of videos you put up on social media, and so on. This isn't bragging, this is you attracting more success based on the success you already have, and it's very effective. This is why famous people get more famous, because other famous people want to work with them.

So consider what symbols of credibility there are in your market, and devise a plan to acquire those symbols. Don't fake it, put in the work. Also, consider what signals you're sending when you post videos or images. If you have an old computer and you're trying to teach people how to make money, we're going to conclude that you don't know what you're talking about because if you did you'd have a better computer. Again, I'm not saying this is the right way to think, but this is how we do think, so pay attention to it.

CHAPTER FAQ

What if I can't come up with a disruptive idea?
Well, ask someone for help. You can make it without one, but it makes your marketing much more powerful if you do have one.

How do I choose which information channels to focus on?
Just keep it simple first, and then introduce more. Meaning start with just text and images, then add video and audio.

CHAPTER SUMMARY

Apart from having a "sexy" offer there's a few things that can help you convert visitors into buyers. You want to give them a new way of looking at their problem, you want to minimize their anxiety by answering all their questions, and you want to minimize the amount of decisions they have to make as each time they're asked to decide something, they get more fatigued and less likely to buy another thing from you. Also consider that people consume and process information differently. Also consider using symbols of credibility to your advantage.

CHAPTER 12

COMPLEX COPYWRITING SIMPLIFIED

Easyonlinebuys.com

Copywriting is a unicorn skill that only a few get really good at. It comes in layers which means it can take years to reach those really high levels. Copywriting is the mechanism that gets people to give you money for an abstract idea. You're here because of the words on a page. There are different types of copywriters and

most copywriters you see in various groups, job boards etc are good at warm traffic copy, because that's easier.

If you look at the launch crowd, they have quite a few people that can write copy, but yet their copy only converts on leads that are buyers, or have massive branding behind them.

To write sales copy that gets someone who has never heard of you, seen you, or know anything about you, or what you have to offer, to buy something from you on the spot is a special skill. As of writing this book there are only a handful of copywriters on the entire planet who can do this and Alen being one of them.

We'd need an entire book to even begin to try to explain the granular details, but we're not here to teach you copywriting today. We are here to get you results as fast as possible. Since Alen is one of the best copywriters in the world who can teach you a lot on the subject, we'll be releasing a separate book on copywriting sometime in the future. For now we're going to keep things relatively simple and just teach you what you need to know to get some results fast. Copywriting is simply salesmanship multiplied. It's being able to take a conversation and have it over and over in an automated way. This is what allows us to scale sales, and for that reason it is an incredibly useful tool that can have a tremendous impact on your business.

LAYERS OF DESIRE

One important thing to realize about your reader is that they have different layers of desires, or "payoffs". They have a primary, secondary, and third layer. Let's use the example of a car.

The primary desire for wanting a car is that it will be able to transport the person from point A to point B. This primary layer is usually an obvious logical need, for that reason you can overtly talk about it in your copywriting. You can directly show it using words and images. Ultimately this primary layer tends to have the lowest impact on sales out of the three layers, unless it is a utility they simply can't live without, but if that's the case you probably don't need to advertise for it, or write convincing copywriting. The primary layer is used as a logical justification mechanism to give themselves permission to buy something. "I need to get from A to B, therefore I will buy a car".

The secondary layer is what the product communicates about them to other people. In other words: self-esteem, respect, and status. If that car happens to be a Rolls Royce Phantom all of a sudden we're talking about a very different "payoff" than if it were a Toyota Camry. The Toyota is most likely only filling the primary need, but the desire for a Rolls Royce is deeper than that. It comes with the bonus of communicating things to other people such as: I am successful, I am important, you should pay attention to me, you should treat me with respect, I worked hard, and so on. None of these are bad things. Wanting a Rolls Royce doesn't make you a bad person.

They're beautiful cars, and there is certainly another component to these types of high end products than just what other people think of you for owning it. That component is the fact that those products are really high quality. They make you feel good just by looking at them, so don't go judging people that own nice things and assume they're doing it because of what they want people to think about them. The point here is simply that there are deeper layers of desire, and this is the second layer. The second layer has quite a lot more power over you than the first layer, and its impact on sales is therefore quite a bit higher. People are generally less aware about their secondary layer of desire, so you can't directly talk about it the same way you can with the primary desires. You can talk about it without talking about. A great example that comes to mind is the old painting company advertisement of the neighbors looking over at the Joneses house, which is in desperate need of a paint job, with the headline reading "Jones must be broke" (Google those words to check it out). The reason this is so powerful is because it is indirectly triggering the secondary layer of desire, which in this case would be the crushing feeling of having all your neighbors talking about how broke you are. How humiliating. They talked about it without talking about it. They didn't say "Do you want your neighbors to go around chatting about how broke you are?". Imagination is very powerful, and that ad proceeded to run for many many years because of the power that image had combined with the gut punching headline. The second layer is what they sub communicate to the world while owning that product. This is their ego justifications. It satisfies their ego.

The third layer simply takes us to the next logical station that our brains would go. If I have a Rolls Royce, people will treat me differently and show me affection, therefore I am validated, loved, and this makes me feel fulfilled. It is the holy grail that all humans want. We don't think about it, so you can't talk about it in your copy. You can't show it because.. How would you? It is accomplished only by having it implied, or assumed by the reader, not by overt images or words.

As you think about how these layers apply to your product it should become clear that you have to understand what the outcome is that they're looking for, or as our friend Jordan, a really good copywriter, says "what's their currency?"

TWO CONVERSATIONS

It's important to note that there are always going to be two conversations going on simultaneously with your reader. There's the conversation you're having with them, and the conversation

they're having with themselves, which typically sounds like this: "what's in this for me?" If you aren't continuously answering that question they'll simply stop reading. They have to feel hope that there's a reward coming by continuing to read, otherwise why would they? The reason they ask themselves what's in this for them is because there's far more than the obvious financial transaction going on whenever someone is consuming your advertising / marketing. In fact...

There's a whole list of transactions taking place when they consume your message, and most sellers are completely unaware of it.

The potential financial transaction is the obvious one. But if that financial transaction takes place it also comes with other transactions such as trust and privacy. They're giving you their personal information as well payment details, and they'll wonder what you're going to do with that data. Can they give you their trust, or this going to be a big mistake? Will you sell their data? Will you harass them endlessly with more marketing and promotions?

There's also the transactions of time, attention, focus, and energy. If they're going to spend time reading your message it means they'll A) never get that time back and B) be unable to do some alternative thing instead. If they're going to use their attention, focus, and energy on you it means they'll have less of it,

Easygroupbuys.com

because they're finite resources. These are all transactions that take place and that's why they want to know "what's in it for them".

These are some things for you to consider as you prepare to do copywriting. Let's switch over now to a long form sales letter formula that you can follow.

SALES LETTER FORMULA

In 2006 Alen took a class on writing in college. They read A Hero With A Thousand Faces, by Joseph Campbell in the class, and in it he discusses the hero's journey. That stuck with Alen. One day a friend called him for help on writing a video sales letter. But rather than writing his usual spiel that worked at the time, the idea of adding the hero's journey came to mind, and he wrote the VSL based on that. The next day Alen woke up to 4 missed phone calls, and a few text messages from an ecstatic friend. He had made approximately $33,000 from one email, and Alen knew he was onto something. Eager to test whether it was a fluke, Alen then called another friend. "Do you have any offers that are working right now?!" he said. His friend was indeed running an offer at the time, and so Alen explained the concept to him, and asked him a few questions as he started writing. Alen finished the VSL, and it did $510,000+ in a few weeks.

Easygroupbuys.com

Sales Summary

Period	# Of Sales	Total Sales
Today	17	$7,949.00
Week to Date	183	$81,160.00
Month To Date	1127	$510,500.00
Year To Date	1723	$791,875.00

To my surprise Alen had a screenshot of this, even though it was over 10 years ago.

He had this feeling that he had figured out the magic pill that made it work. He phoned another friend and did the same thing. That VSL did over $465,000 in two weeks. Then, finally he did one for himself, and the offer did $1,300,000 in 5 weeks. At this point Alen started sharing his discovery in masterminds run by some very well known marketers, and from there on his approach started being taught by everyone. That's how what we're about to tell you came about.

Copywriting is a complex yet formulaic topic which is beyond the scope of this book, but here's the general formula we use. You can participate in our FB group to ask more questions about copy there.

Humans respond to stories. There's a reason the Avengers movies work in China, Europe, USA, etc. We turn storytelling into storyselling. Every book, story, movie, song and sales letter or video sales letter needs an opening. It needs to start the conversation somewhere so we start with an opening. The opening needs to grab and hold their attention for the rest of the duration of the sales pitch and one way to do that is through

tension. It has to create a massive amount of uncomfortable tension (not piss people off) that triggers the different layers of desire we discussed. Example: “I'm rich you’re not” or “I’m fit, you’re not” or “Your wife is going to cheat on you”. **You are making them realize a truth that they already know but are in denial of.** Before they read it they were pulled in 40 different directions, now there’s only 1 thing they care about. Humans respond more to negative / survival based emotions so these kinds of statements will stop them in their tracks. Then we transition into a soft tension release. Which makes them realize that there’s a resolution to this tension.

Release 10-20% of the tension by offering a potential resolution if they keep reading. You also have to show them the resolution.. Show proof / evidence / testimonials… Use imagery, and then put a damaging admission to further remove sales resistance and amplify desire through other people’s results / testimonials, and then push them away “Here’s who this is not for and this might not be for you”. This prevents the reader from picking up that shield we’ve spoken about that we use to protect ourselves from blatant selling attempts.

Introduce yourself and show how you were once in the place that they are in now (without owning that secondary payoff that is ultimately for sale). Insert the hero’s journey story next. This is where the relationship building starts and they find out that “this guy is just like me”. If someone like me got the result that means I can also get the result. If Tom Cruise sold us a cologne we

wouldn't buy it because we thought he was once like us but rather because we want to be more like him or a part of his identity. So depending on the person behind the product this is either about showing you're like them, or that they can be part of you, or get closer to you, if it's a celebrity or high level influencer.

Transition into the catalyst for the Call to adventure. What opportunity showed up on your doorstep? This is the beginning of the Hero's journey.

Describe the self imposed refusal of the adventure, that held you back from actually going on the adventure. Then something happens which leaves you no choice but to go on the adventure. You can no longer refuse. So you go on the adventure and get your ass kicked.

Then you meet a mentor in some shape or form. It could be an actual person, it could be a book that taught you something, a video, a lesson, a community. The mentor can be anything that made you come to a breakthrough realization.

Then you burn the ships.. Because you got your ass kicked on the first try, which helped your breakthrough, you go on the adventure again but you go all in this time. You raise the stakes. You leave no possibility of going back. This could also be triggered by an external event, such as having a child, or a near death experience that gave you a different perspective on life.

Then come all the really hard tests, enemies, and failures.. Just because you had your breakthrough doesn't mean that it was all smooth sailing from there. You run into bigger challenges, enemies, and so on. Due to not being able to go back, and your lack of results you are forced to retreat again, and learn from the lessons you've been taught, which takes you to the next level, and makes you better, more prepared, and more ready than ever.

You put together a new plan of action based on these lessons.

Then you try again.

This time you start to see results, but unlike before the results are consistent, they are bigger, and you don't get your ass kicked. Everything changes for you.

You have a transformation. You reach new heights of life

And now you have a method / model / formula / secret / system / software / app / etc / that can get someone the same result but much faster because you did it the hard way, now they don't have to.

Reveal the product. "And that's why I wrote / created / XYZ". Then we explain the product.. "And here's what this is all about". Features and benefits.

Easygroupbuys.com

Offer a guarantee to neutralize risk. If they're here they're most likely interested. You can further decrease anxiety and perceived risk by letting them know that their purchase can be refunded. Also consider explaining the simple process of getting a refund, especially if you have a "no questions asked" policy. If they think they have to get on the phone and convince someone to give them the refund they'll feel anxiety about that, so alleviate it by letting them know that all they have to do is send an email, for example.

Reveal the price. The higher your price is relative to what they think it's worth the lower return they will see. If you make them see $1,000 of ACTUAL value (not bs. "marketer value") and you charge $10 for it, they will jump on the opportunity.

Insert Call To Action. Let them know how to buy your product, how fast they will receive the product, and anything else that might be relevant.

PS. Remind them why they're buying it.

<u>UPSELL COPY</u>

Once you're able to generate the sale, you have to generate more sales. Take them from where they are to where they need to be. Understanding this mechanism is important. Every solution you provide creates a new problem. What problem did you solve in

your last product, and simultaneously what problem arose from that? For our Automatic Clients Book that you are now reading, getting our templates, sales funnel, copywriting, graphics, and so on is the next logical problem for us to solve. The best upsell is the one that solves the problem created by your previous product. It is also rooted in the primary mechanism of desire. Amplify the desire and wrap it in a bigger, faster, stronger thing.. There's immediate problems and future problems. Your upsells should always be solving an immediate problem.

There, this combined with your own knowledge and research about the market you are selling to should be enough for you to be able to put together a sales letter on your sales page. This concludes the theoretical part of this book. We shared some lessons and concepts with you that should echo throughout everything that you do as a business owner. Now, let's dig deeper into the details and start implementing the contents of this book.

Easygroupbuys.com

CHAPTER FAQ

Do you have an example of a sales letter I can look at?
https://automaticclients.com

CHAPTER SUMMARY

Copywriting is too big a topic to try and teach you in one chapter. We've touched on some basics like the different layers of desire, the two conversations they're having, the transactions that are taking place, and the hero's journey. You have a formula you can use to create your sales letter.

Easygroupbuys.com

Easygroupbuys.com

PART 2

IMPLEMENTATION

Now that we've covered the foundations and mindset shifts needed to pull this off let's switch gears and talk about the ingredients that go into implementing this Automatic Clients model so that you can actually put this stuff into practice and make some money. When it comes to implementing all this you can either be a leader or a fast follower. A fast follower is never going to be able to achieve the same results as a leader, but a leader always leads with arrows in their back. We have decided to be innovators in our market, and we plan to continue to do so,

and be at the forefront. We will be compensated for it, but it won't be without costs. People will steal our ideas, copy our funnels, and profit off of our work, but we'll always be first. Think about where you want to be in your market.

This model requires a significant amount of work, and this is a good thing. Most people are looking for a quick and simple solution to get customers, which puts the bar quite low. When you take the time to create something really good it allows you to not only get a bunch of customers everyday, it also allows you to stand out in a crowded market, until they catch up. This could take years. Put in the time, and make it good! This goes both for your products, but also for your marketing.

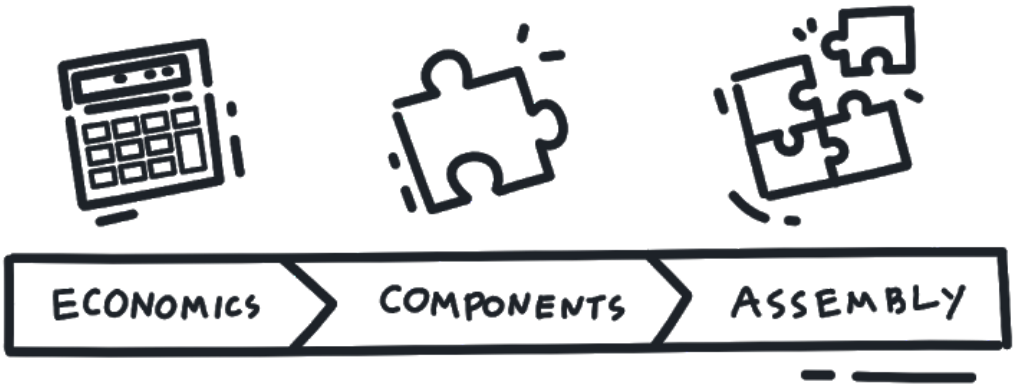
The benefit of all this work is that a lot of it can be reused when you create new products in the future. Most of your copywriting can just be tweaked, your products can follow a very similar model where you just change out the content, and so on. So yes it's a lot of work but you are building assets that you can use for a long time. Alen has written video sales letter scripts that he has reused for over 10 years in different markets.

You can start spending $20 a day and know if your offer is going to work. You don't need to spend $1,000, or wait weeks to find out what's going to happen. That's the beauty of this model. And even though it's a lot of work, we'll help you test the market so that you don't go put in all those hours into something that doesn't work.

Easygroupbuys.com

CHAPTER 13

THE ECA METHOD



The ECA method is our 3 step process for quickly planning, gathering components, and assembling an offer ready to take to market. The idea is to ensure we have good economics, as discussed earlier in this book, finding or creating the necessary lego blocks needed to go to market, and quickly putting them together based on all the templates, benchmarks, etc that we already have. ECA stands for economics, components, assembly. Let's discuss them.

ECONOMICS

We've discussed economics already, but to quickly summarize it: math does not lie. We figure out our numbers before we do anything else. This includes product ideas and price points that we plug into the economics calculator that we've put together, allowing us to see how the numbers will pan out, and whether it is realistic to achieve our goals based on what the current cost of advertising is expected to be. We created an assumption model based on the benchmarks.

[USE THE ECONOMICS CALCULATOR HERE]
https://automaticclients.com/bonus

COMPONENTS

Think of components as lego blocks. Once you have them all, you just put them together for the finished product. Most companies make the mistake of thinking they have to produce all their components themselves. Apple doesn't produce their own batteries, screens, earphones, processors, and so on.

- ➔ They get the processor from TSMC
- ➔ They get the battery from Samsung
- ➔ They get the camera from Sony
- ➔ They get the earphones from Foxconn
- ➔ They get the screens from LG

They package these components together and market it, but the actual components are being purchased from many other manufacturers. This allows Apple to focus on what they're good at, rather than trying to do everything themselves. Effectively by purchasing this book you too have purchased some of the components needed to take your offer to the market.

- ➔ If you'd like to deploy this Automatic Clients model you need to understand how the model works (as described in this book).
- ➔ You need our economics calculator
- ➔ You need to put a core product together (maybe a book)
- ➔ You need a sales page
- ➔ You need upsell pages
- ➔ You need a membership area to best deliver your book + upsells
- ➔ You need email + SMS marketing
- ➔ You need automations
- ➔ You need your shopping cart configured

These are all components that we can give you, or you can go out and build them yourself.

Visit https://automaticclients.com/rapid-launch-stack if you want to save a lot of time by getting our components that you can just modify instead of building everything from scratch.

Easygroupbuys.com

ASSEMBLY

Once you've got all your components it's time to assemble everything so that it's ready to take to the market. This is really the easy part, all the hard work has already been done, mostly by collecting or creating all the components for your offer. Now you take your copywriting, your sales funnel templates, your graphics, your videos, your products, and put them all together. Make sure you test that everything works, unless you like losing money, and put up some ads on your target social media ad network. Remember, if you have strong economics you will do just fine with even mediocre advertising. If you have weak economics the best advertising in the world won't help you.

We also recommend utilizing things like Fiverr, Upwork, and so on to leverage some of your time in order to get help. This will help you move faster and create better products and marketing.

Easygroupbuys.com

CHAPTER FAQ

What if I can't get the components I need somewhere else?
Well, then you make them. It's not that you never create components yourself, it's about realizing that if someone else makes them better than you it might be a good idea to buy them and focus on what you're good at instead of reinventing the wheel.

Where can I buy components so I don't have to create them myself?
Well that depends what you are trying to create. If you're putting together an AC style offer you can get our graphics templates, sales page copywriting formula, entire 10-step sales funnel, membership area, email autoresponders, book writing workshop, and book graphics templates.. Then go check out https://automaticclients.com/rapid-launch-stack

CHAPTER SUMMARY

Rather than just winging the process, and creating every component of your product by yourself, use the ECA method. Figure out your **Economics** to ensure the math checks out before you start. Gather **Components** (such as our sales funnel, video templates, and so on), and then just **Assemble** your offer.

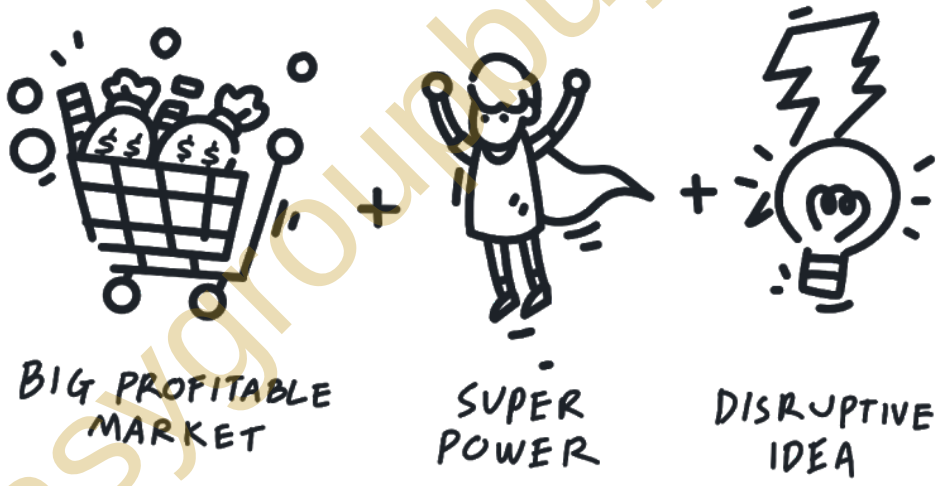
CHAPTER 14

THE AUTOMATIC CLIENTS FORMULA



There's a couple of ingredients you'll want to figure out before you start putting together your offer. Here's the Automatic Clients formula. Big profitable market + Super power + Disruptive idea. In this chapter we'd like to go over each one.

Easygrowthbuys.com

HOW TO FIND A GOOD MARKET

First let's discuss what makes a good market. You'll want to have a large number of buyers with a long term common want, need or desire. You also want a medium to large number of sellers trying to satisfy those wants, needs, and desires. We often hear people who get excited about finding markets with zero competitors. There are only two reasons why there would be zero competitors in a market: either they suck at researching and just couldn't find any, or it's an awful market so bad that nobody wants to sell to it. If a market exists then there is an exchange of value taking place. People are buying and selling goods and services. Your job is to go in and carve out a slice of the market for your business. There should be buyers and sellers entering and exiting the market, in other words there should be new opportunity within the marketplace. The more margins and profitability the market has, the more sellers and competition it will attract.

This one is very important: you have to be able to reach buyers through channels within your control. Meaning: you can run paid advertisement SOMEWHERE that we know is going to get in front of your target audience. If your target audience is the Sentinelese tribe in the Indian Ocean you are going to have a very big problem reaching them.

If we are able to reach them via paid advertising the next challenge becomes to be able to do so without losing money. The direct enemy here is the ad network, but the truth is that it goes one level deeper than that because the cost of running ads on the

Easygroupbuys.com

ad network is to some extent set by the level of competition. So while your competitors are not necessarily the direct competition here, the ad network is, and the cost of advertising on that ad network is dictated by the competition. So if you overcome the ad network barriers then by default you've automatically overcame all of your competitors, at least for now.

We also like to divide most markets into two separate segments. The **t-shirt and hoodie market**, and the **suit and tie market**. The t-shirt and hoodie guys are less sophisticated, less financially capable, but bigger in numbers. The suit and tie guys are more sophisticated, have bigger wallets, demand more professionalism, but they're smaller in numbers. Your branding is going to attract one of the two, but rarely both. Just think of the image of a guy in a suit and tie, vs. a guy in a hoodie, it's a very different type of look that subcommunicates lots of things. Consider this as you define your market. If you look at the business opportunity space it doesn't take long to realize that quite a few gurus entered the market with a t-shirt and hoodie brand, and after a few years pivoted into a suit and tie brand.

You also want to consider the barriers to entry in that market. Anyone can create an online course about how to make a website, not many companies are able to build a skyscraper. The lower the barrier to entry the more competitors you will have, and the higher ad costs as a result. This means that your marketing and products have to be in the top 3-5% to survive long term.

Easygroupbuys.com

The barrier to entry is equated to the amount of energy required to overcome that barrier. We talk about leverage energy in the Become The Grandmaster chapter, this is where it comes into play. Access to information also plays a role here. In the year 2000 not a ton of people were selling information on the internet. How to sell on the internet was exotic information only possessed by a few people. Now that information is in the hands of exponentially more people, making it a much more competitive environment. People from China, Singapore, Nigeria, Germany, Norway, etc. are now all entering the market. 10 years ago it was only people in the US, some in the UK and a few in Australia.

The world is changing fast, and the rate of change is increasing.

If your business is in direct control, or dictated by some third party you should understand the danger of being in that position. A few years ago I had a Facebook messenger bot agency that created and maintained chatbots for clients. One day Facebook said “we are shutting down the ability to create new chatbots for an undefined period of time.” That went on for about 30 days and I had absolutely no control over the service that I was selling. So be wary of relying on another company, or ad network, and so on.

Your market should be conducive to an economic model (such as our Ascension framework) that will allow you to run paid ads and make a profit. What we mean by this is the fact that we

are able to sell $5-10k programs in our back end, but you wouldn't be able to do that in say the dog training market. In general they're going to spend far less money than our clients are in that market. If the cost of advertising is expensive and you aren't able to make the economics work due to high competition and low ability to get customers to spend large amounts of money it's simply going to be very difficult to make the math work out. When this happens is when you see just a handful of companies surviving and eating up all the marketshare. The smartphone market is an example.

We also want to bring up the idea of trend surfing. New trends are constantly reported around the world. Some things become very prominent thoughts in people's brains as they're hyped up in the news, and this offers opportunities. Bitcoin, chatbots and coronavirus are fairly recent examples that come to mind where they turned into a business opportunity very quickly. You should understand that people who move fast do have a really good chance of capitalizing on trends, but the big downside is the lack of compound effects. A few people have gotten rich riding waves like this, but nobody ultimately got really rich by riding trends, that happens only when you get compounding results.

Now, let me try and alleviate some pressure and let you know that most people struggle with finding a good market, but they shouldn't. You remember we discussed problem-solving vs. marketing, and since your business ideas should stem from that "how can I help" problem-solving source, finding a good market starts there. Who can you help? In order to help you brainstorm

we've put together a spreadsheet of thousands of different niches that you can go into and deploy your offer.

[DOWNLOAD THE MARKET NICHES SPREADSHEET HERE]
https://automaticclients.com/bonus

It's also important to realize that it doesn't have to be YOU that's acting as the face of the offer, or the guru. It doesn't have to be your expertise that we are selling. You can partner with a content creator and have them be the face of the offer. You can learn more about how to find a partner later in this chapter.

Once you have at least a starting point as far as who you might be able to help depending on the skills and knowledge that you have, we can take another step and look into that market a bit more. Here are some questions for you, or whoever is the face of the offer, to ponder.

- ➔ What are you good at?
- ➔ What have you done that others would like to achieve?
- ➔ What do you want to spend time on?
- ➔ What kind of person do you want to help?
- ➔ How many companies are in the market?
- ➔ How much annual revenue is in the market?
- ➔ How old is the market?
- ➔ What's the typical economic model that companies in that market are using?
- ➔ Who are the top people/companies in the market?

Easygroupbuys.com

The answers you are trying to figure out are

1. Who can you help?
2. Is the market big enough to satisfy your goals?
3. Can you enter the market with the model we describe here or do you need to tweak?
4. What does the competitive landscape look like?

In our market we can tell that people are fed up with the same model being taught and sold by everyone, which has caused the model to be way less effective (webinars). This is a big opportunity for us since we have a different model that is working extremely well. One day this model too will be outdated, and we will have moved on to whatever is working then.

But the first person or company to break the model walks away with the most amount of money. Every market goes through cycles as we discussed in the Transition Periods chapter. In each cycle there are different business models and types of products being used, and whoever is the first to successfully scale their business model in that market is going to walk away with far more than the rest.

Easygroupbuys.com

MARKET RESEARCH

Once you have an idea of what market you want to enter, it's time to dig a little bit deeper and validate or invalidate your choice. Here's our process. The first thing we want to do is to try and figure out the different layers of desires as we discussed in the

copywriting section. What are the reasons people in this market buy?

Markets can be put into two different buckets: repair versus replacement. Are they trying to fix something? Do they have something that is kinda working but just fixing? Like needing a spark plug for their car? The key here is to figure out what that spark plug is. What is it they want? You'll be hard pressed to try and sell them something other than that. They've already decided what they need.

The other bucket is replacement. They want something new. They're looking for a new lawn mower, car, or whatever the case may be, and it's going to be very hard to try and sell them a new spark plug.

What we'd do next is find the top 5 companies or offers in this market, and confirm that they actually are doing as well as we might think. We look up their traffic on similarweb.com. Is the traffic there? Is there a history of it running for a while? We'd spy on their ads on Facebook, Google, and so on. We'd read reviews about the products, and the company.

Once confirmed that they might be doing well, we're going to buy their product. We'll record the sales funnel and screenshot the process for reference later. At this point we're also trying to notice patterns in what they're selling, prices, traffic sources, and so on.

Remember, whenever you enter a market you're using a "best guess in time" as to what's going to work based on available information you have. Doing this allows you to get a better guess in time, because you are modeling and looking at actual events

where people are putting their money where their mouth is, buying stuff.

The idea is that someone can't get a million visitors to a website a month through paid traffic without generating lots of revenue. Traffic costs money and they have to be making money in order to be spending it on traffic.

Also, you can't go model someone's offer running on YouTube and put it on LinkedIn. There's different contexts that need to be taken into consideration. Different ad networks operate on different modalities, so sell accordingly.

Finally, realize that this is always going to be an iceberg, and no matter how much research you do there are going to be things below the surface that you don't know, and it's the things you don't know that kill your results. Be wary and ready to adapt.

THE FACE OF THE OFFER

We connect better with human beings than faceless companies, so you may want to have a face for your offer. Trust is a huge component of the conversion process.

When you consider what goes into creating an offer you'll realize that there are practically two components to it: making products / content, and then sales / marketing. They are different skill sets, and although it is certainly possible to do it all yourself, you don't have to. I am usually in charge of content and product creation and Alen is in charge of marketing and sales. Here are some ideas to consider if you have decided not to be the face of the offer yourself, and would like to find someone to partner with.

What makes a good face for an offer is someone who is likable, trustworthy, who is good on camera, and ultimately can help the market. The face is there to help attract people to the offer, and to build a relationship with the audience.

Because "being good on camera" is something that usually doesn't come naturally, you might be hard pressed to find someone who meets the criteria. Once you know what market you're entering we recommend starting with YouTube to find potential partners as they are already used to putting out content, and if they already have an audience you'll also find that when you do launch your offer you'll get a nice head start by simply pitching the offer to the existing audience.

If you were to go into the "magic" niche you'd simply go look for YouTubers who put out content about magic, and put them all in a spreadsheet, including their contact information. Then you would email them and explain that you are publishing a book (or whatever product) in that niche and are looking for someone to be the face of it (which of course means they get equity in the offer).

One of our clients went into 3 separate markets by leveraging other people to be the face of the offer. He did $240,000 last month.

By partnering with other people you're also putting yourself in a position where you can enter several different markets, even simultaneously, whereas if you decide to be the face of the offer chances are you only have 1 or 2 skills that could potentially be monetized. There are upsides and downsides to both, but if you do decide to get a partner make sure to put a

contract in place. The last thing you want to do is build a big successful business only to find that the face of your offer no longer wants to do it for whatever reason, leaving you with a big headache and lost opportunity. This is a business and should be treated as such. Here are some things to consider when finding the person.

- ➔ Does the person enjoy creating content?
- ➔ Do they do it for fun?
- ➔ Are they able to do it well?
- ➔ Etc

The biggest mistake our clients make is they go find say dog trainers who have jobs as dog trainers and try to turn them into content creators, as opposed to finding a content creator already putting out dog training content. Those are two different skills and it rarely ever works out.

YOUR SUPERPOWER

Easygroupbuys.com

In order for people to buy into your products they need to be able to put you and your company in some kind of category. Who are you, and how can you help?

- ➔ Are you the Sales guy?
- ➔ Are you the Video girl?
- ➔ Are you the Automation guy?
- ➔ Are you the italian cooking lady?
- ➔ Are you the Email girl?
- ➔ Are you the Human Resources guy?
- ➔ Are you the magic guy?
- ➔ And so on.

They'll also ask...

- ➔ Ultimately what can you do for me?
- ➔ And how can you help me reach my goals?

You have to take some time to figure out what it is that you do well and put that at the front of your communication. You do not have to be an expert to help people, you just have to know more than the person you're helping. Remember that.

- ➔ Alen's superpower is selling (copywriting, conversion rate optimization, high ticket deals).
- ➔ Robert's superpower is operations, and getting projects to the finish line.

Easygroupbuys.com

Some of our students in the Automatic Clients program:

- ➔ Preben's superpower is SEO.
- ➔ Kevin's superpower is helping gyms get annual contracts.
- ➔ Tommy's superpower is lead generation.
- ➔ Nick's superpower is helping men perform at their peak.
- ➔ And so on.

What's your superpower? Ask people you know if you're not sure.

YOUR DISRUPTIVE IDEA

As discussed a little bit earlier in this book, your disruptive idea is simply your way of showing a different approach to the problem.

It's a crucial part of capturing people's attention as you don't want to be regurgitating the same stuff that everyone else is saying. Ask yourself what is everyone else in your market doing? Can you do the opposite?

Disruptive ideas also make for really good book titles, and my favorite example of this is Chris Voss' book Never Split The Difference. Splitting the difference in a negotiation is usually an easy and clean way to end the negotiation with everybody being happy. Well Chris was a hostage negotiator, so the idea of asking the bad guys with 2 hostages to kill 1 of them and let 1 of them go didn't seem like a good idea. He realized that this could also apply in less dangerous negotiations, where splitting the difference is just both parties settling for less than they wanted, and there are usually ways both sides can get more out of a deal by digging a little deeper. It's a perfect example of taking a common idea of "splitting the difference" and flipping it upside down, and using it as the book title and a section in the book.

Your disruptive idea is very important because it makes potential buyers realize that you know something they don't. They see that you have a different way of doing things, and this is very powerful when it comes to persuading someone to buy your product. How to come up with the disruptive idea? Start with asking yourself the question...

"What business are you really in?"

Easygroupbuys.com

Kevin, one of our high end clients who helps gym owners get clients through digital marketing came to us and we asked him the simple question of “what business are gym owners really in? After much back and forth, we realized that they weren't there to manage equipment, get clients, or anything like that. They were in the recurring revenue business. So his entire marketing shifted to adopting his disruptive idea around on how to increase your recurring revenue to gym owners.

AVERAGE ORDER VALUE CONTRIBUTION

This is one of the most important metrics to look at when it comes to your sales funnel. If your AOV is $20 and your core product contributes $10, OTO 1 contributes $5, and OTO 2 contributes $15 we have a problem, because due to the nature of this model OTO 1 always contributes the most to the AOV, and if it doesn’t, it means there’s something wrong with the OTO 1 product, price, sales message, or a combination. Take a look at the Ascension Model breakdown table from earlier in the book and pay attention to the AOV contribution of each product.

Easygroupbuys.com

Ascension Model	Price	Contribution	AOV contribution
Core product	$5	100%	$5
Upsell 1	$197	20%	$39.40
Upsell 1 Downsell	$97	10%	$9.70
Upsell 2	$67	10%	$6.70
Upsell 2 Downsell	$33	5%	$1.65
Total AOV			$62.45

Don't get caught up in conversion rates of each product too much, get caught up in 1) what is your AOV and can you make it higher, and 2) what does each product contribute to the AOV and can it be improved?

Because this model is built on volume you have to realize that the core product is a multiplier. If you are selling 300 books per day and you increase your Average Order Value by just $1 that seemingly insignificant improvement turns out to add $9,000 per month to your revenue. Adding $5 to your Average Order Value means an increase in $45,000 in revenue per month. Not so insignificant anymore right? Pay attention to how much each product in your funnel adds to the AOV and see what you can do to increase it.

MAXIMUM LIFETIME VALUE ("MLTV")

While looking at AOV is certainly important, there's a metric almost no one seems to care, or talk about. That's MLTV, or Maximum Lifetime Value of a customer. This is an important number because most business owners love the idea of making more money. One of the ways to do that is to sell more to the customers you already have. Now, if your most expensive product is $1,000 that's the most you'll ever be able to sell. You can't sell more. You put that limit on your business. If you add a $20,000 product and you bring in enough customers, someone is going to buy that $20,000 product. There's always a percentage of your market that will buy higher priced products and services. Think about what your MLTV is by adding the price of all your products together, and then consider what higher priced products and services you could potentially add.

We work with our high end clients in the AC Accelerator to have a $100,000 MLTV if possible, then we help them architect systems to realize a high value of that through various effective marketing channels.

Easygroupbuys.com

CHAPTER FAQ

If there's no way to introduce $25k+ products how can I increase my AOV?
You can introduce more products in the other price ranges. Also consider adding recurring based extension programs to your one time purchase products. Meaning if someone buys a book there's an opportunity to have a recurring program that gives them more relevant information similar to that in the book.

Is it a good way to increase MLTV by adding more products of the same value (for example another few $5,000 products) rather than adding one expensive one?
If there is a need for it, sure. All your products should ultimately exist because someone needs them to solve a problem. If you can do that with multiple programs in the same price range, and avoid confusion about who should join what program, by all means.

How do you come up with $25,000 - $100,000 products to sell? That seems crazy to me.
Well, the value has to be there to be able to charge those kinds of prices. As far as what products go, you typically have to get into the Done For You business of executing for the client, as opposed to just advising them. So you are potentially looking at hiring team members focused on client work if you want to get into this business. You shouldn't assume that this is a must for you. Focus after all is of paramount importance so if adding this product to your business screws things up put it on the shelf for now. If things are running smoothly this can be a great way to bump your revenue. To answer the question: whatever you teach people

Easygroupbuys.com

how to do, offer to do it for them.

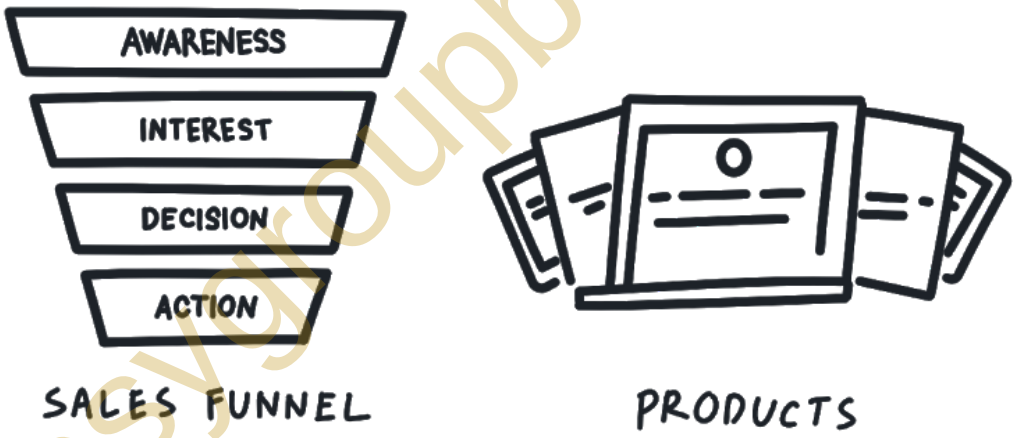
CHAPTER SUMMARY

In order to package all your knowledge into a compelling product you'll want to make sure that you 1) are entering a market that has the potential to satisfy the financial (and other) goals you have in mind, 2) figure out what your superpower is and 3) come up with your disruptive idea. These three combined ensure that you not only enter a market that has the right potential, but that your marketing message is attractive and has the firepower needed to actually get people to pay attention.

Easygroupbuys.com

CHAPTER 15

CREATE YOUR SALES FUNNEL + DELIVERABLES



Easygroupbuys.com

Once you've figured out how you can actually help people, what the superpower and disruptive idea is, and your product, it's time to create the products and sales materials. The idea here is to create a core product that we can sell at scale. The value of this product should far outweigh its price, and this will create that first "surface level" relationship with your new customer. Once we've done that we can continue to bring them value and have

them get to know us through our strategically engineered content, or “value bombs” and “awareness bridge”, which increases their awareness and gets them to purchase other products, where you make your profit.

DRY TESTING

Before we start building everything out, unless you are already sure that it’s going to work (this is usually only true for people with lots of experience), we recommend doing what we call dry testing. Dry testing allows you to throw a feeler out to the market and see what comes back, without putting in all the work of creating a full blown product suite as well as the sales funnel, email sequence, and so on.

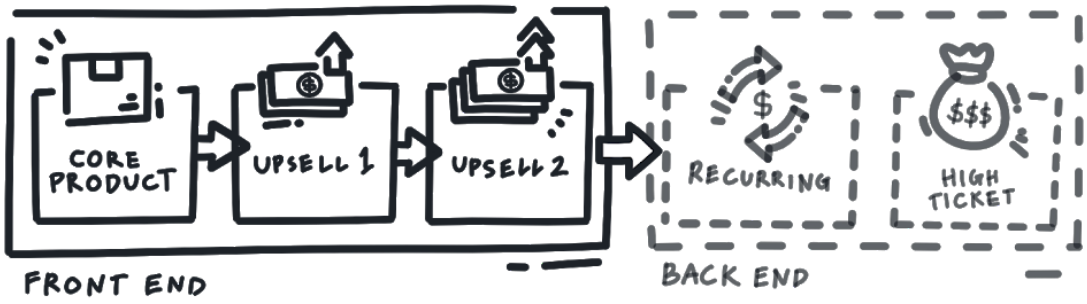
The way to do a dry test is simply to create the sales page for a product that does not yet exist. You can then put a field to enter email and phone number in order to go to the order form, at which point you might just say something like “Thank you for your interest, we’ll let you know when the product is ready for purchase.” Then you just have to keep track of how many leads

Easygroupbuys.com

you collect and look at the numbers to see whether that is something you can make work or not.

You should have all the numbers plugged into our Economics calculator and if you assume that 40-50% of the people who entered their details with the intention of buying would have actually followed through with the purchase, you can work out the math and find out what you can expect to pay in advertising cost to acquire a new customer. We find that our economics calculator is usually about 90-95% accurate. How that ad cost matches your expected average order value will determine the next step. You might be good to go, at which point you'll simply proceed to start building out the rest of the offer, or you'll need to improve the economics of your offer in order to make sure you can afford the cost per acquisition. We keep coming back to this idea, hopefully it's ingrained in you at this point: if your business is not working the way you need it to, fix your economics to the point where it allows you to run paid advertising to acquire new customers! Once you feel confident that the numbers work, let's look at the product suite that you should create.

CORE PRODUCT



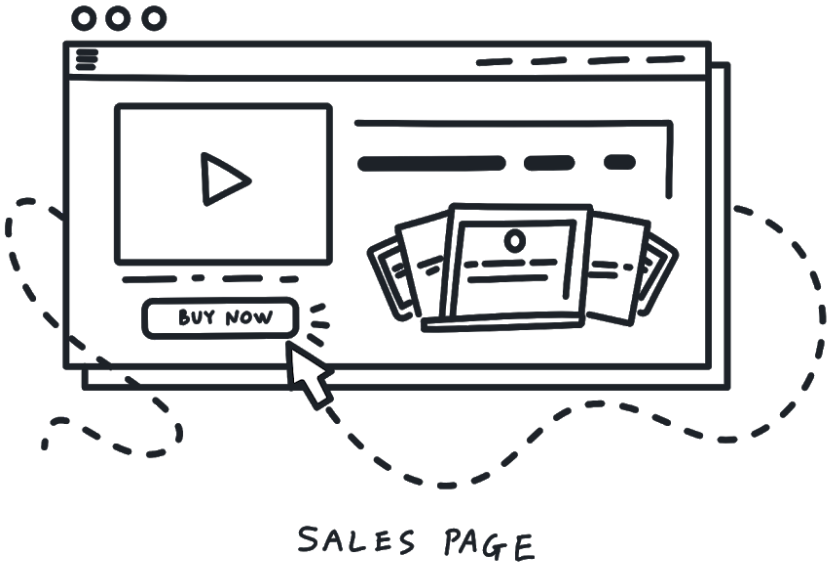
Your front end is your core product ("CP") that gets people in the door, plus the one time offers / upsells ("OTO"). The core product is usually a book like the one you're reading right now, but it doesn't have to be. If it makes sense to sell a book we recommend it, but if selling information doesn't fit to your market, there are some other categories of core products you can sell such as:

So you can write a book, or a small business website contract, and policy templates, or a report, or a vitamin supplement, or a weight scale, or a software, and so on.

Now, along with the actual core product you should include bonuses that are worth the price of your product alone. Meaning if you removed the core product, the bonuses are each individually worth the price of the core product. As far as the deliverables of the bonuses they should also fall into the above categories, but have some additional value add. If you want to get really smart about it, read the chapter about Customer Awareness, and include bonuses that actually move your customers along the awareness diagram. This way you're adding value to their purchase but you're also turning them into warmer leads for your back end products and services in the process.

If you revisit the site where you bought this book you'll realize that our bonuses are actually insanely valuable, so model what we did there.

THE SALES PAGE

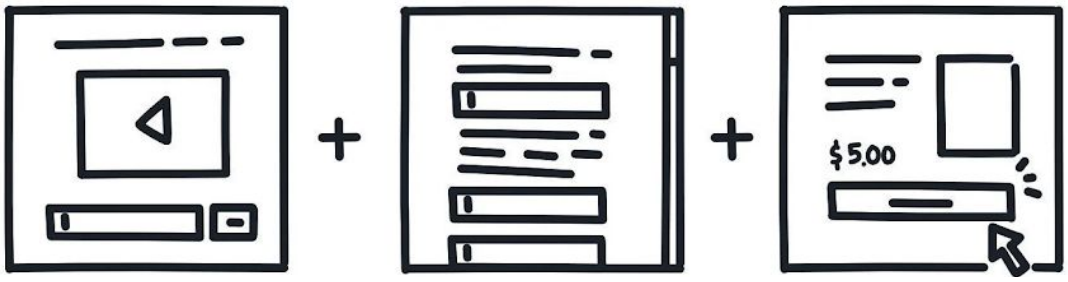


When it comes to the sales page that will be heavily responsible for making the sale for your core product, you should model our tri-page hybrid sales page that we developed, because it works incredibly well.

People these days "scan pages" and then stop and read what catches their attention. The more times you can get them to pay attention as the scan goes from top to bottom, the more you can increase your conversion rate.

The Tri-Page sales page idea is simply a hybrid between CPA ("Cost Per Action" offers, often used in lead generation,

supplement, and porn industries) offers (short form), Direct Response (long form), and eCommerce product pages.



CPA LONG FORM eCOMMERCE

First you have the short from CPA style sales page, the idea here is that the viewer should be able to digest the whole sales message really quickly.

Then you have the traditional Direct Response long form sales letter where people can get really deep into the story behind what you're selling. Also important to note here is that a big portion of our ads are directly taken straight from this sales letter which makes the whole process of going from an ad on a social media platform to consuming our sales message congruent.

Throughout the whole page there are eCommerce elements engineered to get the sale. When you look at Amazon and think about how much money they've spent testing how to get as many purchases as possible, it should be obvious that there are things we should model based on their testing. There is a big focus on testimonials & verifying claims that are made.

Watch the "Why Everything We Do Is Mobile First" video in the Advanced Acquisition Theory course that came with your

purchase of this book for a further walkthrough of the tri-page sales page.

PRICING

The price of your core product is usually going to fall somewhere in the $5 - $50 range. Remember the 10x rule? $5 front end should get you $50 AOV, if you go to $10 front end then you should aim for $100 AOV. So keep that in mind. This rule does not apply for products under $5. There is no hard rule to what exactly your price should be, you might have a cheaper product, you might have a more expensive product. The goal is to have a very inexpensive product that can attract lots of buyers, who are happy to make the purchase straight from their phone (so you don't want it to be over $100 as we tend to lean more towards using our computers for larger purchases). If you're doing a book just charge $5-10 for it. If you're doing a course we suggest the same, and so on. Make it an amazing offer, that's always the thing that has the biggest impact on conversion rates, which people tend to forget. How amazing your offer is moves the needle far more than split testing different colored checkout buttons.

RECURRING PROGRAM

If it makes sense you should absolutely try to find a way to put a recurring program in the mix. This will ensure there's some revenue coming in every single month even after you stop promoting the product.

Easygroupbuys.com

Apple, Netflix, Amazon all have massive recurring programs. Most retailers derive up to 50% of their profits from credit card interests (another sneaky recurring program that pays every month) and all these are part of hidden economics.

You can do it in the bump offer by giving away a free trial, or perhaps as a One Timer Offer after they purchase the book. You can also release some kind of new content every month like a monthly training, or interesting interviews. Think about what you can offer people that continuously brings them value, and add this to the mix if you can. There are ACTIVE vs. PASSIVE recurring programs.

An active recurring program is something that people are usually paying a little bit more for because they are actively using it and therefore frequently reminded of its value. A gym membership is an active recurring program, assuming you actually use it. You can usually charge a bit more for active programs because people are using them; they tend to see the value a little bit more clearly, but it also depends on how much of a utility your product is vs. just “nice to have”.

A passive subscription product is something you pay for, but you aren’t necessarily reminded constantly of the value it adds to your life. Paying for electricity is in many ways a passive subscription because you take the fact that your fridge is working for granted so much that the thought of it not working never even enters your mind. In the business world this could also be something like an email sending software where automated emails are going out to your customers, and you’re paying for the software but not regularly tinkering with it.

How much you charge for your recurring product is usually influenced by how much value you are adding to the customer's life, and since the perception of the value from a passive program is lower since they don't even think about it, you tend to want to charge a bit less for it, but it ultimately depends on the value it brings, and how much of a utility it is.

PRICING

You can always experiment with pricing but we typically see recurring programs in the B2C market in the $5 - $20 per month range and in the B2B world it is often in the $10 - $100 range. Start there, and don't be afraid to test different price points.

ONE TIME OFFER ("OTO") #1

One time offers, or upsells are simply great offers that you present people with right after they buy your core product. This is going to help you increase your Average Order Value a lot, allowing you to spend more money on advertising to acquire more customers. We typically price the first OTO around $47 - $197, but it depends on your market as well as the price of your core product. If your core product is $1 it's a little steep to do an OTO at $500. Don't be afraid to test different price points.

The way to come up with your OTO is to think about what else your customer needs. They just bought your core product, how can you help them get the result they came for, in a bigger, faster, stronger way? You'll also remember we talked about

Easygroupbuys.com

primary mechanisms of desire, the first OTO should also appeal to the primary mechanism of desire.

In this book we talk about our ECA process and how companies like Apple buy components from other companies, they don't make everything in house. For the iPhone they buy the camera, battery, screen, processor, memory and so on from other companies. They don't create all the components themselves. Once people buy our book it makes a lot of sense to offer readymade components you, the person who bought this book, would need if you were to go out there and deploy this Automatic Clients model. So we offer components that we already successfully used, at a price that will save you a lot of time and money.

Upsells usually fall into these same categories, and they typically are made to save the customer time and money, and help them get bigger results, faster.

PRICING

Upsell 1 has tremendous price elasticity, mostly because the person just bought and you've tapped into the highest possible buying heat the customer will ever be in.

The price point here can be up to 100x, that means a $5 core offer can lead to a $500 upsell. Alen has offered $1,000 upsells that sold well and in fact when we ran the 2 Hour Agency offer at $37 initially, our OTO 1 was at $497 with 8% take rate.

The higher the price point of your upsell, the lower the take rate is going to be, so you're going to have to aim for the most effective math. Look for the top of the bell curve.

We typically recommend $47 - $197 for the first one time offer, with the higher end of that range being geared more toward B2B and lower end for B2C. Again it's important to test, and it's also important to remember that the only thing that ultimately matters here is how much is this product contributing to your Average Order Value? The first OTO is typically the biggest contributor to the AOV and if that's not the case for you chances are you need to change the product, price, or sales message, or all three.

ONE TIME OFFER #2

OTO 2 pricing has half the elasticity of OTO 1, so up to 50x at most. OTO 2 should appeal to the secondary mechanism of desire. Other than that OTO 2 is effectively the same thing, just continue to ask yourself and your customers what else they need in order to get what they came for, and turn this into another offer that you can present them with right after purchase. All this is doing is further increasing your Average Order Value as there is ALWAYS a percentage of people that are going to take you up on your One Time Offers. Again, this allows you to spend more money on advertising to get even more customers. The better the product matches what the customer wants, the better it will convert.

PRICING

For the 2nd one time offer you should be seeing quite a few less takers than OTO 1. We recommend testing two different strategies here: do a product lower priced than OTO 1 $47-147, and test a much higher priced one $200-$1000 with the idea being that even one taker contributes a lot to the AOV.

DOWNSELLS

Downsells are versions of the OTO products offered to people who say no to them. A soft downsell is when you simply offer a different payment option for the OTO you just tried to sell them, without really trying to sell them on the product again. It could be a payment plan, or a discount. A hard downsell effectively resells them on the product again, with a different payment option. Downsells will not be huge contributors to your AOV, but remember: every dollar counts when you're running ads.

CHAPTER FAQ

How can I count what amount of the people who entered their details with the intention of buying during the dry test would have actually followed through with the purchase?
You can't get exact numbers. Based on our testing, if your checkout page is good you should be able to get a 40-50% conversion rate from the people that land there, so use that benchmark to figure out how many buyers you would have.

How many upsells can I add? Can I add more than 2?
People really start to drop off a lot after OTO 1, so we do 2, but if you do 3 and more they will generally not contribute much to your AOV. So do 2 or 3, no more or less.

CHAPTER SUMMARY

Typically you want to create a core product, and two upsells, with downsells for when people say no. You'll need a sales page for each product and when starting out we recommend Clickfunnels or Thrivecart as the shopping cart software which allows you to "1-click upsell" your One Time Offers to make it as frictionless as possible.

LAUNCH CHECKLIST

Here's everything you'll want to have done when you launch, or shortly thereafter.

Deliverables

- ❑ The Core Product
- ❑ Bonuses
- ❑ One Time Offer 1 Deliverables
- ❑ One Time Offer 2 Deliverables
- ❑ 3+ Value Bombs
- ❑ Back End Product Plan / Deliverables
- ❑ Membership Area
- ❑ All Technology Integrated & Tested For Functionality

Marketing

- ❑ Branding
- ❑ Sales Page
- ❑ OTO 1 Page
- ❑ OTO 2 Page
- ❑ Membership Area / Thank You Page
- ❑ Email Marketing Account Setup
- ❑ 7 - 30 Days Of Email Follow Up For Each Product

Back End Sales

Easygroupbuys.com

- ❏ Back End Product Deliverables
- ❏ Call Booking Page
- ❏ Call Booking Confirmation Page
- ❏ Sales Script / Flow
- ❏ Order Form
- ❏ Onboarding Process

Miscellaneous

- ❏ Support Desk Setup
- ❏ Facebook Page
- ❏ Instagram Account
- ❏ Terms & Service / Refund Policies / Contracts / Privacy policy

Finish creating your front end product so that it's ready for purchase. Some people have a tendency to create average products, and if you do chances are you'll get average results. Take the time to do this right.

Download the launch checklist PDF at https://automaticclients.com/bonus

CHAPTER 16

PLAN YOUR HIGH TICKET PRODUCTS

Easygroupbuys.com

The world has changed when it comes to purchase behavior. The reason for this is because of inflation and a rising cost of living. $5,000 in 1990 is nowhere near the same as $5,000 today. In fact, $5k in 1990 would be worth $9,808.49 today, almost 2x. As inflation and cost of living increase these higher price tags become the norm. We've seen people charge as much as $16,000

for just an online course. A lot of our clients have a mental barrier about charging high prices, and we did too at one point, it's normal. However, not being able to charge seemingly ultra high prices for things is actually not reflective of reality. So if you feel like "I can't do that" just know that while that may be how you feel about it, it's not actually the truth.

This high ticket product idea is a crucial component of this business model. In some rare cases where you have low advertising costs and low competition you may be able to be profitable just from selling your front end products alone, but even if you were, you'd be leaving a ton of money on the table by not implementing this chapter of the book into your business. With that said, in this day and age this chapter is a necessity for most of you in order to scale your business profitably.

So let's recap where you are at this point. You have a front end core product along with two upsells or more. Selling those products allows you to spend money on advertising and make that money back from the incoming revenue, which brings us to this point. You are now getting plenty of new customers every single day, but you're not making much profit. This is where we fix that. It's time to plan your high ticket back end products and services, and learn how to sell them.

WHAT HIGH TICKET PRODUCTS & SERVICES SHOULD YOU SELL

Which market you are selling to is going to dictate your decision-making here. If you are serving the B2B market, and

let's say you help companies with their marketing, it is fully feasible for you to have 1) $5,000 - $10,000 group coaching programs and 2) $100,000 Done-For-You services. You should have both.

If you however are in the dog training B2C world for example, $100,000 price tags are no longer feasible, and $5,000 group coaching is maybe doable but not so probable. You might be looking more at a $1-2,000 price tag tops for your back end products. However, B2C markets make up for this with volume of customers. You should also strongly be considering a recurring program that offers fresh new content as well as a community, in order to fully maximize your profits.

A good way to look at your whole business model here is that your front end product should be entirely Do-It-Yourself. This allows you to deliver at scale without any human intervention. Since the product is a DIY product the customer is on their own.

Next up is the Done-With-You category, at this point you start thinking about serving those who want a little bit more attention and speed, and you can typically deliver a scalable product to them as well by way of some kind of online course combined with a group coaching scenario. This is what we do in our Automatic Clients program where there are worksheets to go through, video training to accompany the worksheets, as well as weekly calls with myself and Alen. This is also referred to as the one-to-many model, and it's very good. We've been able to get clients to 7-figures with this model.

Easygroupbuys.com

Finally, if you can, you should also add an ultra high ticket Done-For-You service. In our case we actually take on clients where we create their entire Automatic Clients offer. Together we figure out the niche and the front end products. We actually write their book, their sales copy, create their book cover, sales funnel, and can even manage their ads as well as supply a salesman to close deals for them. As you can imagine we have to charge a lot for this service since it is a lot of work and has a massive upside.

So you have 1) DIY 2) DWY and 3) DFY and in my opinion you should have products and services for each of these categories. This will allow you to have economics that are incredibly strong, allowing you to outspend all your competitors in order to bring in new customers.

The next question is: how do you sell these high ticket programs? It took us about 10 months to figure this out, and it happens to all come down to awareness.

ENGINEERING AWARENESS

Just because they purchased your product doesn't mean that they're aware of how you can help them. You got this book but we're going to do a lot more work to engineer your awareness level of everything we're doing. We're going to try our best to make sure that you and everyone else who bought the book reads it.

You can sit back and hope that your customers will take it upon themselves to elevate their awareness level to where it needs to be in order to want to purchase your back end products,

Easygroupbuys.com

or you can engineer it in a way so that it happens sequentially, and within your control, as opposed to theirs. Eugene Schwartz developed a diagram which describes 5 different levels of customer awareness, and this turns out to be incredibly important. The 5 levels are:

Unaware - the customer does not know they have a problem
Problem aware - the customer knows they have a problem but not what the solution is
Solution aware - the customer knows what the solution is, but not that your product exists
Product aware - the customer knows about your product, but not about the competitors'
Most aware - the customers knows everything they need to know to make a significant purchase

You see there is a big difference between a $5 buyer and a $5,000 - $10,000 buyer, and this is it. You can be Problem aware and make a $5 purchase, but if you are just problem aware you will not make a $5,000 - $10,000 purchase, unless you're a billionaire. So your job after successfully getting them to purchase your front end low-dollar product is to increase their awareness, bring them value through content, and get them to like and trust you.

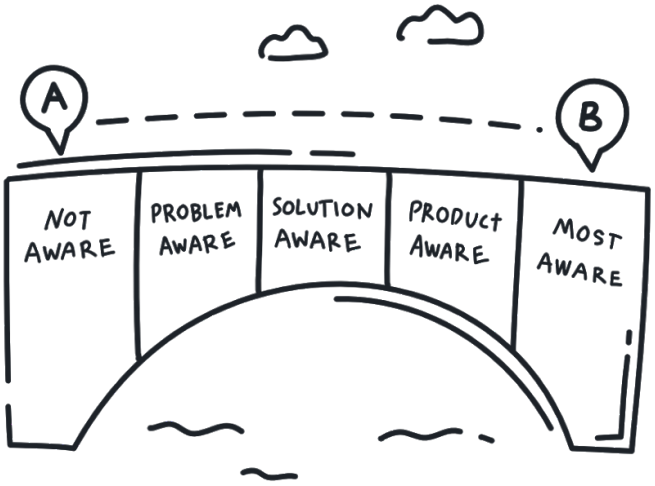
Now you can just wing all this, or you can engineer this process so that everyone who purchases your front end offer is then served strategically planned content which helps increase their awareness as well as feelings of trust and likability.

Easygroupbuys.com

A $5 purchase is a very surface level relationship between you and the customer, and the way to get people to want to invest more money with you is getting them to see you as their trusted advisor. A lot of this comes down to actually being able to help them, never forget that. Problem-solving is the foundation your whole business should be built on, we covered this earlier. The rest comes down to strategic content.

CHAPTER 17

VALUE BOMBS & AWARENESS BRIDGE



Once somebody enters your world, by purchasing your frond end product, or joining your Facebook group for example, we start the process of ascending them to the back end products. This is done by value bombs and the awareness bridge. Think of value bombs as little moments of you teaching them something valuable. It helps the viewer, and makes them know, like and trust you more. This then makes them more likely to want to do more business

with you. In order for that to happen we need to have them cross the awareness bridge. The value bombs lead them to the awareness bridge, and the bridge itself is designed to change their belief, and show them how you can help. Let's cover value bombs first.

VALUE BOMBS

Value bombs are shorter pieces of content where you teach. You bring value to your audience, and they like you more. If you remember we talked earlier in this book about all the different transactions that take place when someone is consuming your content.

There's the transaction of time, attention, energy, opportunity cost, and if they do business with you there's the financial one, their privacy, trust, and so on. Here's the thing. In order for a macro transaction to take place, such as a larger purchase, a host of micro transactions first need to occur. They need to first spend time (by consuming your content) and focus, before they'll spend money. Value bombs are micro transactions, and a chance to show them how helpful you can be.

We talked about the shield that our prospects immediately pick up when we are blatantly trying to sell them something, this is one of the challenges with a webinar: everyone now knows the whole webinar is engineered to sell something at the end, not to provide value. The other challenge is time. Asking 2 hours of somebody's time is a huge request in today's age. Value bombs solve both of these challenges by 1) actually providing

Easygroupbuys.com

value and 2) doing so in bite sized 1-60 minute videos instead of one massive 2 hour disguised pitch fest.

The first thing you need to do is get clear on what the desired end result is that the customer wants. In our case, if you're reading this you are probably interested in being able to generate tons of new customers whenever you need to. If that's where we are going, the question is what do we need to teach you to get there? Remember, we don't hold back like others do in hopes that you'll pay us for the final piece of information. We give away the information and if you want our help implementing everything we charge for that. So again, what do we need to teach you? In our case, we made a list of some theories that we felt people needed to understand, as well as some practical things like showing our sales funnel and such.

VALUE BOMB FORMAT

It can be text, audio, or video. We prefer video.

The way to create value bombs is to start with ideas that help people. They can come from things you've done in your own life and business that might translate into helping your audience with their problem, or they can be derived based on what the market seems to want, or ask for. Are people in your market complaining about similar problems, and if so can you create content around those problems? As far as what to say in your videos we have two frameworks for you to choose from. One is a bit more direct and surface level, which suits people that are brand new to this, and

Easygroupbuys.com

the second one is a bit more effective, but you typically need some experience to use it. Here they are.

VALUE BOMB FORMULA #1

1. Attention (mention who it's for)
2. Problem definition (describe the problem we are solving)
3. Solution (describe the solution)
4. Proof & credibility (back up your claims with proof and any supporting evidence that shows what you're saying is true)
5. Call to action (get them to the awareness bridge)

VALUE BOMB FORMULA #2

1. Summary of big ass idea
    a. Self sorts who this is for and the problem it solves
2. Proof & credibility
3. Offer a solution (big ass idea explanation)
4. Call to action (get them to the awareness bridge)

VALUE BOMBS DURATION & PLACEMENT

Value bombs should be as long as they need to be. They typically end up being 5 - 15 minutes long, but those are not hard rules. If you feel they include a complete thought, and bring value, consider it done. As far as placement goes they should go anywhere they can. Send them to your email list, in your FB

group, use them for retargeting, upload to your Instagram stories, and so on. Again, the more you have the better, but if you start with 5 send them out daily to your customers, and then start to create more. This will have a big impact on your bottom line.

AWARENESS BRIDGE

Value bombs are designed to make people know, like, and trust you, as well as showcase your expertise. The awareness bridge is designed to change their belief. This is accomplished by showing why the old beliefs, or standard practices in the industry are not effective, and then outlining a better solution, and showing proof for your argument.

AWARENESS BRIDGE FORMAT

The AB can also be created as text, audio, or video. If you think about it this book is also an awareness bridge in a way, but we also have a video version, the “Advanced Acquisition Theory” course where we show why the model most people are using, and we also used, is not as effective as the one we use now.

AWARENESS BRIDGE FORMULA

The AB content is based on what the old beliefs are, what the new model is, and the reasons for why the new model works.

Destroy their old belief

Easygroupbuys.com

First you have to show why the way they do things now is not effective. You should know what the standard industry model is, and that's the belief you should attack.

Explain why everyone is wrong

The issue is based on them not getting the results, but you have to tell them why that's happening, and if you can attach it to a story that is more powerful. I tried doing webinars before, and could never get them to work, so that became the story that I told and then we discussed some of the reasons why that was the case. Explain here why the model is incomplete, insufficient, and illuminate the problems. This now creates a void for you to fill.

Transition into the new belief

Outline the new model / mechanism that works. Show the logical explanation of it. This is effectively what will dictate how many videos your awareness bridge is going to be. If you look at our awareness bridge there's quite a few videos because we identified several reasons why our model is so effective. Example:

- ➔ Transition periods
- ➔ Conversion velocity
- ➔ 10x factor of scaling
- ➔ Advertising foundations
- ➔ 3 Levels of customers
- ➔ Selling to a mobile first world
- ➔ Our 7-figure sales funnel
- ➔ Our 7-figure formula

➔ What our AC Accelerator program is, who it's for, and how to apply

Show proof and evidence

Show some supporting evidence that it does work for you, and others. At this point they now have a problem. They have something they want, but they just learned about it, and so you are in a good position to sell. This takes us to the actual call booking video.

Help them book a call

This point here should be one video, and here's the format for it. It should be a quite direct video that lays out the outcome and how you can help them get it.

- Describe the outcome
- Do a quick summary of top 1-3 ideas from awareness bridge (optional)
- Explain the process that you use
- Show the results that you get for yourself, and others
- Outline how you help them get results and the specific tools and resources you use to do so
- Define the timeline of how fast they get results..
- Describe who is a good fit and who is not. This shouldn't reflect their inability to pay but rather their values vs yours (integrity etc).

Easygroupbuys.com

- Let them know if they want to take the next step, it's time to book a call to figure out how you would help them specifically

One note here is that you don't need to add cheap shot fake scarcity if you have something people actually want.

AWARENESS BRIDGE DURATION & PLACEMENT

The AB videos tend to be a little bit longer than value bombs, ours were typically 15-60 minutes long. But again don't get hung up on that, simply put in what needs to be there, and it'll be as long as it needs to be.

Your AB should be its own little funnel that is hosted on a webpage, with a video and graphical representations of what they get. By the time they get to the call booking page you are selling your program overtly, there's no reason to try and hide it.

GETTING SALES CALL SIGN UPS

If you are selling a high ticket back end program that warrants a phone call before letting someone into the program you'll need a process for getting them to book a call with you.

The reason for this is because as the price of your product goes up, the more it demands attention in isolation to finalize the deal. You can sell a $5 product off a website without talking to anyone, a $5,000 - $10,000 product not so much. This is another reason why webinars are good for selling $1,000 products (even

Easygroupbuys.com

if they're getting less effective), because they have attention in isolation. No one's going to give you a significant amount of money without first paying attention to you.

The value bombs and awareness bridge does most of the heavy lifting here, but it's easy to mess your whole business up by mistakenly thinking that just because you brought value to your audience makes them know exactly how to buy from you. The biggest reason people don't buy from you is because they don't know how. Explain how. Show them. Tell them. Show them again.

You'll want to have a call booking page hooked up with an appointment setting software (we currently use ScheduleOnce). On the page we put a video (explained above in the awareness bridge formula) that asks them to watch the awareness bridge video where we explain the program, and we make sure they actually watch it. The difference between leads that watch your awareness bridge video and those who don't is enormous. People who watched our video were pretty much ready to buy, and the calls would sometimes last 10-15 minutes. The people who didn't watch the videos needed us to explain everything, and the calls would routinely last up to 90 minutes.

We typically only let people book calls maximum 3 days into the future as recency is very important. Once they book a call we simply redirect them to a thank you page where we have another short video just letting them know how the call is going to go, and if there is any preparation they need to do.

FOLLOW UP

You've heard the saying "the money is in the follow up" and you can't argue with that. If you follow up at each stage of the process you will make more money. You can accomplish a lot with automated follow up but when it comes to high priced consulting programs and so on you'll need a human being to do the follow up. Sales people should not rely on "1 call closing" because they'd lose out on 50% of sales they could get by simply checking in with interested prospects until they either buy or officially say that they're not interested.

DELIVERING HIGH TICKET SERVICES

The most important thing here is that you can actually help people in a way that scales. This is difficult to do in a Done For You product, and that's why the Done With You or One To Many model is generally accepted as the best way to do this. It allows you to combine an online course with weekly group calls where you answer specific questions from your students. One big thing

that we have realized, which in many ways is a sad truth, is that most people would rather dream about everything that goes into getting the desired outcome, than actually doing it and getting the desired outcome. We know this because we always split our group calls with our students into Theory, where we share our latest ideas, and Q&A. What most people show up for is the Theory, even though we are actually available to specifically help them with their exact questions for their exact situation, only a small percentage of students take advantage of that. The rest of the students want our ideas, and that's enough for them. We bring this up because you should give people what they want, as well as what they need. If you are only doing Theory you could be helping more people with the specifics (which is what actually gets them results). If you are only doing Q&A you could have a higher attendance rate, and higher ratings if you added Theory. Give them both.

Easygroupbuys.com

CHAPTER FAQ

What's the difference between value bomb videos and the awareness bridge video?
Value bombs are simply content videos that help you build trust and show your expertise. This moves them closer to the awareness bridge video. The awareness bridge is where you rewire their belief, and it's the conversion mechanism for your strategy session calls. It explains your program, who it's for and so on, so that they only book a call if they actually want to join.

How many value bomb videos should I make?
The more the better, but focus on quality. Get 5 done and then just add more when you have time.

Have any of your clients experienced difficulties bringing people through the awareness bridge?
Sure, we all do on different levels. It's all about breaking down the components and try to see how you can improve. Is the problem with getting people to watch the video? Is it the video itself? Is it the follow up? Etc.

CHAPTER SUMMARY

Once you have figured out what Done-With-You and Done-For-You products and services you can sell it's time to realize how to sell those. There's a gap between a $5 purchase and a $5,000 - $10,000 purchase that you need to bridge. This is done by providing valuable content that moves customers along

the awareness scale. This is done through the use of value bombs and an awareness bridge.

Ideally you should map out a few big ideas, say 5 - 10 value bomb videos that provide a lot of value and move them closer to the awareness bridge. Your awareness bridge videos strategically show why the old model is ineffective, what the new model is, the results you and others have had from it, and then supporting theories that prove the new model is better. This will qualify people tremendously so that when they show up to a strategy session they're there because they want to join, not to "find out more because they're curious". In the next chapter we'll cover the final part: actually closing the sales.

Easygroupbuys.com

CHAPTER 18

CLOSING $5,000 - $10,000 DEALS

If you've done everything we've covered so far, you should be in a really good position. You should actually be helping people. They should have bought your front end product and consumed value bombs and "awareness bridge" which gets you to this point. Now you're getting people to sign up for strategy calls, or whatever you want to call them. If you do what we say they should be high

calibre leads with the budget to join your program. We talk a lot about the pricing of similar programs in our “awareness bridge” so when people book a call with us they already know the price of our program. There’s no anxiety there, it’s just a matter of seeing if they’re a good fit. We’re not resorting to tricking people into disguised sales calls where all they really want is to find out the price of your product. Those are bad leads. You want leads who are the most aware, that are ready to buy, and you just try to find out whether you can actually help them or not, and if you can, you invite them to join the program.

SALES CALL INGREDIENTS

One thing you need to understand about closing $5,000 - $10,000 sales is that there is literally no magic to it if you do what we teach. If you don’t, you’ll have to resort to pulling rabbits out of hats. For now remove any ideas that you need secret powers to close a $5,000 - $10,000 deal. You need 1) to be able to help the other person 2) they need to know that you can help them, and how 3) you need to take them through the process of making it real and tangible to them, answering all their questions, and finalizing the deal.

Again, the awareness bridge should already do a lot of the qualification for you. You shouldn’t have to explain who you are, what you do, how you can help, and so on. This should already be covered. Ideally they should even know the price of your product, or have a really good idea of what it might be.

Easygroupbuys.com

In order to make it “real” for them what we do is simply take the time to figure out what it is they want to achieve. We ask them about which market they’re going into, what they want to sell, what their financial goals are, and then we put all this information into our economics calculator, and walk them through what exactly needs to happen to get them where they want to go. All this is based on being able to show them actual results. So if you’re starting out, focus on this a lot in the beginning: getting results for key people that become your “poster boy” so to speak.

Then we take their questions, and if they qualify we tell them the price of our program, how to join, and what will happen when they do. No magic. No anxiety. Just good clients.

Recency is also an important ingredient of being able to close these deals. Think about it. Have you ever gotten really into the idea of buying something that was a bit expensive? Maybe a new car. You visit the dealer. Research online. Maybe even did a test drive and got a quote for the car? Then nobody followed up with you, and even though you had every intention of making that purchase, something (or in many cases NOTHING) happened, and you didn’t buy in the end. This happens all the time, and this is why follow up is effective. Similarly when someone books a strategy call with you about joining your high ticket program it’s important to minimize the time between the call booking and the actual call itself. We typically limit the availability to 3 days into the future, as for every minute, every hour, and every day that goes by, joining your program gets a little bit less interesting, a little less urgent, and a little less

important. “People follow through when they’re in state” as Tony Robbins says, and this is true. In an ideal world this means your leads should actually receive a phone call within 5 minutes from booking their appointment, even if they booked the call for 2 days later. Try it out, watch what happens. Recency is everything in high ticket selling.

HIGH-TICKET CLOSING FRAMEWORK

First off a quick note on the whole phone call vs. zoom audio vs zoom video. We like to do zoom with video because it lets us actually show you how we’ll help you, and it forces the person on the other end to pay attention more if they’re on video, as opposed to being on the phone and doing three other things at the same time.

Once the call starts you can do a little small talk and transition into the meat of the call by asking why they signed up for a call. This will tell you why they’re on the call and this will be the anchor of the close of the call. You want to pay attention to their story and look out for red flags (discussed below), and find out what they are trying to achieve. You also need to find out how much one client is worth to them. Then pay attention to repair vs. replacement. Why are they there? The reason you ask this is because it’s hard to create desire, you can only amplify it. If they’re there for repair and you are trying to sell replacement it will never work. So tailor it to them based on their response.

Once you know what they want to achieve you demonstrate how others have gotten the result they want, and

briefly show them how you would help them achieve the same. You must get confirmation that they understand how it all works and that they can see how it would work for them. If you sense confusion or skepticism, ask questions or simply share your observation “you seem confused by this”, in order to close any gaps. Ask them if they have any questions, until they ask for the price. This naturally makes them the initiator of the close which removes buying resistance.

Once you’re done you say “that’s the end of my pitch, do you have any questions?” Either they ask questions, which you answer, or eventually they ask “how much” you have to justify the price by showing how they can easily make that money back (and more), then simply be quiet. Let them push the call forward and if they want what you have they’ll want to sign up. If they want what you have but can’t afford it they’ll ask for a payment plan. You should offer payment plans but it can’t be the same price as the full upfront payment. There needs to be an incentive to pay upfront and since not everyone is going to finish making their payments you’ll need to cover some of those losses as well. We recommend adding a 20% markup and spread the payments out over 3 - 12 months. You’ll also need to justify this 20% increase by simply sharing that it’s not fair to the people who pay upfront if the price was the same.

We also make sure that they understand the timeline to get results is flexible. Meaning if someone is going to devote full time to this project they’ll get results much faster than someone doing one hour per day.

Once they tell us they want in we actually give them the link instead of processing the order for them. There are two reasons for this. It puts them in control of the purchase making it voluntary, and therefore lowers the amount of buyers remorse cases. The other reason is that if the checkout occurs on their end it actually allows us to track the sale properly and we can see which ads lead to back end sales, if we process it on our end we won't be able to have as good tracking by relying on "offline tracking".

Also split test different prices and payment plans to find the best solution, but ultimately you should have such a solid back end program that $1,000 here or there shouldn't really impact the conversation rates.

ULTRA HIGH TICKET DEALS

The biggest differentiator between high ticket ($3 - 6k) and ultra high ticket ($25k+) is that high ticket tends to be more of a "pulling them to you" sale, and ultra high ticket needs to be more of a "push away" sale. The reason for this is that they need the decision to be their decision. You can't force it upon them. This is why if you go to a low level used car dealership they'll try to sell you very overtly. If you go to a Rolls Royce dealership they'll offer you a drink, ask about your life, and let you come to the purchase decision with a little bit of guidance. For the most part your job here will be to tell success stories of people like them who worked with you and let them piece it together themselves. You can increase the desire to work with you by displaying a lack of

interest in no longer offering the service, or not having enough capacity. Gary Halbert never got more clients than when he wore a “clients suck” hat in his seminars, and spent half the time talking about how much he hated working with clients.

The people that you sell ultra high ticket services to have more money than time, and time is more important to them than money. They also tend to be very invested in one thing, versus spread out and dabbling in multiple projects. If a dentist goes to dentistry school and graduates with lots of debt, start a dentistry practice with large overhead and so on, they’re very invested in making that business work, and for that reason more likely to do whatever is necessary. If someone has 12 businesses and are dabbling in another one, they’ll be less invested in making that business work, and therefore less pressed to invest further money into it. Also pay attention to the financial threshold they have. After a certain number they start to see much less return on their investment.

You’re going to run into different types of personalities and need to sell them based on their personality. The numbers guy wants numbers. The “change the world” passionate guy wants to see the impact he can have. The Build an empire / ego guy needs to see how others will perceive him as higher status. This is true for high ticket and ultra high ticket sales. Appeal to their specific personality and show them what they want (remember our chat about different layers of desire in the copywriting chapter).

Payment terms will usually not be all at once, depending on the size of the transaction. If they can’t do all at once simply

do a down payment and then a performance or time based remaining payment.

Easygroupbuys.com

CHAPTER FAQ

I'm not good at sales, can I still do this?
Sure. Make sure you do the value bombs and awareness bridge properly, and then just follow our process and script and you'll get sales. Ultimately you probably want to get dedicated sales people to do the job.

How do I make sure I take care of my customers properly?
Well first realize that there are two components to this. They want to be taken care of, but even more important than that is that they want to FEEL taken care of. This can be as easy as checking in with them to ensure they got everything they need, asking if they need help, and going out of your way, or training your support to go out of their way to try to find opportunities to give the customer a better experience. Try calling American Express or Apple support and you'll see how it's done.

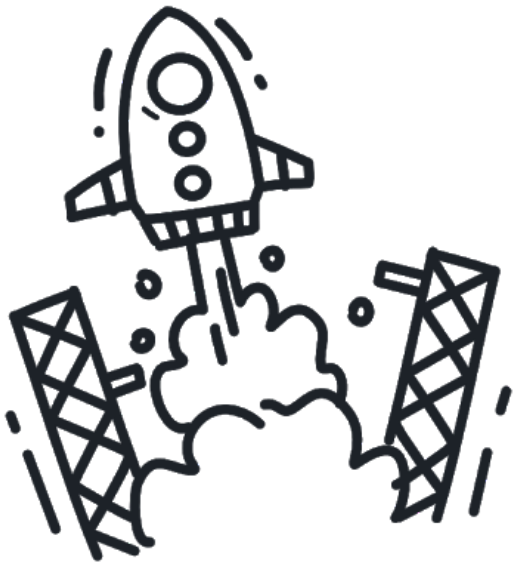
CHAPTER SUMMARY

I used to think that salesmen had magic powers. Don't get me wrong, some people are certainly better at selling than others. Some people can go sell any product that's half decent. But that's not what we're talking about here. We're talking about selling a product you have the power of making sure is a good product that actually helps people. You're also in charge of warming up the leads using value bombs, and the awareness bridge we talk about. Since you're in charge of this whole process you can ensure that the people that sign up for a call with you are actually high

calibre, qualified leads that just need to finalize the deal. So you don't need magic. You don't need pressure, in fact we try to remove as much of the pressure as we can. We recommend doing a lot of the calls in the beginning by yourself, even if you hate it. You will learn a lot about your market which will help you identify their problems even deeper, as well as the words they use to describe it. This will also help you do better marketing and copywriting. If time does not allow, you can get a salesperson to start doing calls for you for a commission, at which point you can be getting $5,000 - $10,000 clients without talking to them, which can sound surreal, but this is Automatic Clients. This is what you came for.

CHAPTER 19

SYSTEMIC SCALING



Let's talk about the one thing people can't stop talking about. The almighty s-word. We all want more, and scaling is how you get more. The primary reason for doing it is simple: you get more customers so that you can make more money, but let's not forget

that when you scale your business everything scales, including your problems. Sure, You get more customers, and followers, attention, fame, a bigger community, and more money. However, you will also scale your stress, overhead, the amount of people that hate you, server load, software costs, staff, risk of payment processing issues, taxes, and legal liability. With that said, it's still worth doing if you ask us. Ultimately scaling does add complexity to your business, so be prepared to manage that complexity.

Figure out your income goal because building the biggest business you can might not be what you want. Again, when you scale everything scales, so you can expect your stress levels and the amount of problems you have to deal with to increase as well. Some people want to build the biggest business they can, some would rather pull it back a little bit, make a bit less money but also deal with less headaches.

As we talked about briefly in the conversion chapter, there are macros and micros that you can optimize. Most people intuitively focus on micros, which is going to give you micro results. We try to establish what the macro components are, such as operations and constraints that hold us back massively, and fix those. Micros optimization has their place too, but what we do is establish "enough is enough" numbers and once those are hit we move on. Further 1% increases have such marginal effects that our time is better spent on optimizing macros.

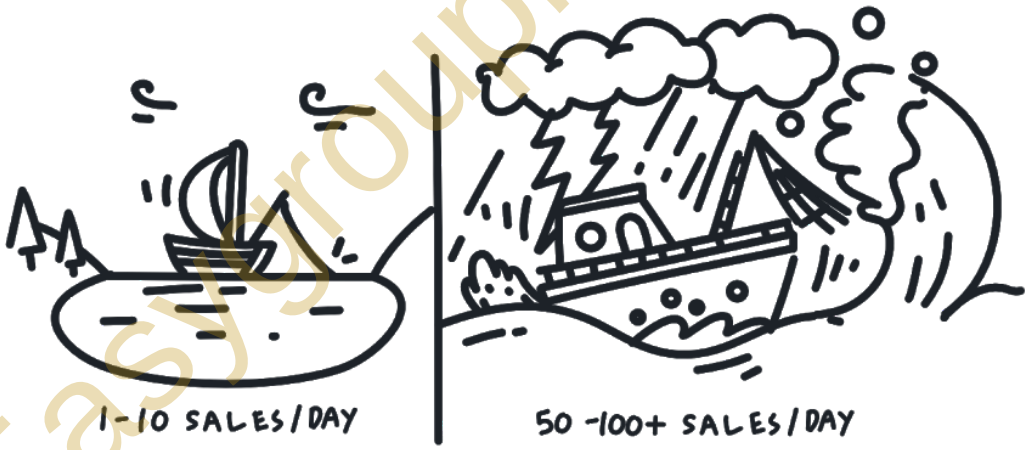
How do you scale your customer acquisition once you do have proof of concept? It's simply a matter of more advertising, marketing, and sales, and finally operations.

Easygroupbuys.com

As you pour in bigger budgets into your advertising the number of people that see your ads increase. This of course increases the number of people who click and engage with your ads, which in turn also leads to more people being retargeted, more frequently, by you. More people find out who you are, they learn about your ideas and philosophies, as well as what you sell.

Those people find their way to your checkout page, so more people buy your core product, your bump offer, your upsells, and so on. This also means that more people buy your back end products, which we will discuss more in depth below.

THE WOBBLE



When you're at 1 - 10 sales per day your offer is like a little tiny boat floating around in a lake. There are no waves, and little risk. As you scale your offer, it's like that boat is getting bigger and bigger, and being put into more and more dangerous waters and weathers. Once you start hitting 50 - 100 sales per day you will

Easygroupbuys.com

start to experience the wobble. This is when you get rocked, and the math of your offer starts to seriously get tested. Your cost to acquire a customer at 1 - 10 sales per day is not the same as it's going to be when you start to reach 100 sales per day. Again, when you scale, everything scales.

As you scale your offer the more weight you put on that offer. Your AOV goes down and your CPA goes up, and if these numbers get inverted far enough your offer tanks. Which is why you see so few offers running long term. Try to remember all the ads you've seen that just disappeared, and how many you've seen consistently for 12+ months. There are very few.

Since you are not just paying to show ads to people who buy your products, but also paying for all the people who saw your ad and didn't buy your products, those numbers too will scale. You will be paying for even more people to see your ads and not buy, which means that your cost to acquire a customer is going to go up, and that's why it's so important to put in the work making the product and the marketing so good that your economics allow you to scale without losing much money on the front end.

Easygroupbuys.com

OPTIMIZE FROM BACK TO FRONT, NOT FRONT TO BACK

As you should know by now your business should have front end products and back end products. The front end is designed to bring in customers for free (by recuperating your advertising costs) and the back end is designed to bring in profit. Most people

have a tendency to constantly optimize the front end, but the back end is where all the money is made. Without the back end dialed in it really doesn't matter how well your front end is doing. Furthermore, while your optimization focus starts at the back end it changes as you scale. Here's a loose guide on where to put your focus depending what level of scale you are at.

If you're getting 1 - 10 front end customers per day your focus should be on optimizing the back end (details on how to do this below).

If you're getting 10 - 50 front end customers per day your focus should be on optimizing your marketing by split testing sales pages, order forms, emails and sms, membership area, sales video, bump offers and upsells, and so on.

If you're getting 50 - 100 front end customers per day you should focus on optimizing your advertising. Create a ton of new ad creatives, scale to other platforms, do more retargeting, and so on.

If you're at 100+ front end customers per day your focus should be on optimizing your operations. Improve the onboarding, minimize support tickets, improve the support and the sales team, hire talent if needed, and so on.

Daily customers	Complexity	Optimization focus
1 - 10	low	Optimize back end
10 - 50	medium	Optimize marketing (split test)
50 - 100	high	Optimize ads (split test)
100+	high	Optimize operations / sales team / etc

HOW TO OPTIMIZE THE BACK END

Let's look at how to break down your back end sales process into components and what you can do to make it perform better. There are two variables that we can look at. First is the number of people who book a call with you or your sales team, and the second is the close rate of those sales calls.

As we have discussed before the value bombs and awareness bridge are what gets someone from being a front end buyer to a back end buyer, and so the thing that drives call bookings is your awareness bridge and how many people we get to that bridge. In order to get someone to the awareness bridge we use value bombs as you know by now. These are simply micro pieces of valuable content with a soft call to action to go consume the awareness bridge content. We recommend creating a list of "big breakthrough ideas" that cause a paradigm shift in your

prospects mind, something unique and different that they have never seen before. Start with just 5, and then continue to build on that list. The more you create the more money you make. Once you have a list of ideas you turn those into pieces of content. You can do it in different formats: text, video, audio. Then you simply distribute these pieces of content everywhere you can: on social media, email, your blog, and so on. The more eyes you get on them the better. What you'll find at this point is that some of your content will get REALLY good feedback. You will undoubtedly know when you hit on something that resonated, and so you keep track of those concepts or ideas. You can then run those as ads, and continue to create content that goes deeper into those popular topics. The call to action on value bombs is usually not a hard pitch, but more of a soft action like "DM me if you want the link to [INSERT NAME OF AWARENESS BRIDGE PRODUCT / VIDEO / ETC]" or just "Go watch [AWARENESS BRIDGE] here.."

Value bombs bring people to the awareness bridge, which we have discussed earlier. In a nutshell it's a strategic series of valuable content pieces that shows the viewer the world that they're in now, and our world on the other side of the bridge. The other side of the bridge is the solution to all their problems, and we get them there by sharing the breakthroughs and mechanics that help them solve their problems. The call to action at the end of the awareness bridge content is to book a call to apply to join, but not everyone is welcome. We regularly turn down people (more details on this in the closing rate section below).

As far as getting someone that lands on your call booking page to actually book a call goes, what you need to communicate is how all the ideas that you have have been turned into a system that you will help them implement. The call is about how you will help them implement that system. Just like a sales page you'll want to share proof of other students' success and have a calendar to book the call. Once someone does book a call the next thing you have to worry about is them showing up to the call.

We typically send out a text message 30 minutes before the scheduled time to make sure they're good to go, and then we either send a zoom link or simply call them at the scheduled time. We call them even if they don't reply to the text message. If they miss the call we follow up with email and sms and we "kill them with kindness and value". We continue to bring value and in some cases they may end up buying from us in the future.

The next thing to optimize is the sales call itself. How can you improve the close rate? Follow the framework we laid out in the closing deals chapter above.

FINDING SALES PEOPLE

When it comes to finding sales people it's a matter of selling a product they can believe in, offering good compensation, and then you just need to run the numbers game.

You can post job ads in Facebook groups, local job boards, on craigslist, and so on. Narrow down a list of 5 people you'd like to speak with on the phone / zoom. Once you find your top 2 candidates give them a test and decide the definition of success in

advance. For example if you give them 15 sales calls and you want a 20% closing ratio in order to keep them, and one of them closes 4 out of 15, and the other 1 out of 15, it's clear that one of them passed the test and should be hired for more calls. This is the easiest way to find the right person, let them do the job. Don't rely on the interview and so on to pick the right person, do the best you can to find the ideal candidate and then put them to the test, of course while compensating them, and just let the numbers speak for themselves. Typically sales people would get 10-20% of $5,000 - $10,000 sales.

We also make sure to train our sales people on what they can and cannot say. Because it's commission based they'll push the boundaries which can get you in trouble, so make sure you figure out what claims can be made and so on, and communicate to the sales people that it is unacceptable to make certain claims. We even have a list of claims they cannot make, to ensure that everyone sticks to it and doesn't get us in trouble.

Provide them a script based on the structure we laid out above, as well as a protocol for following up, and then just reiterate and improve on this whole process as you go.

Easygroupbuys.com

RED FLAGS

We turn down buyers all the time, and you'll typically find out when they share their story whether this is someone you should avoid or not. Remember the 3 levels of customers? Look out for deflection of responsibility. If they're telling you about all the other things they've tried and the fault was always on someone

else, the same thing is going to happen with your program. They're not going to do the work and it's going to end up being your fault, according to them. If they can't afford the program and have to borrow money, or try to change your pricing or payment plans, this is usually also a guaranteed future problem for you. Furthermore if they don't have a concrete idea of what they're going to do with the program it's also going to end up being a big headache as all of this becomes your problem. All these things will typically incur more costs than the money they pay you. A lot of these costs are hidden, such as stress, constantly trying to get your help, and poisoning of your community. Some will file chargebacks which will cost you actual money, and ultimately if you have a bad feeling about the sale your gut is usually right. Turn them down, and let them know why.

HOW TO OPTIMIZE YOUR MARKETING

When it comes to optimizing your marketing it's important to realize that whatever it is that you are optimizing was always the thing that followed to a precursory event. If you are optimizing your sales page the precursory event was the click that took place from your advertisement. This context has to be considered for best results. In other words, if your ad talks about the problem of getting clients through webinars, and you try to optimize your sales page by changing the copywriting angle entirely so that it focuses on the problem of a subpar branding, you'll run into congruence problems. With that in mind let's explore some of the

variables that you can optimize to improve the results of your marketing.

DISRUPTIVE IDEAS

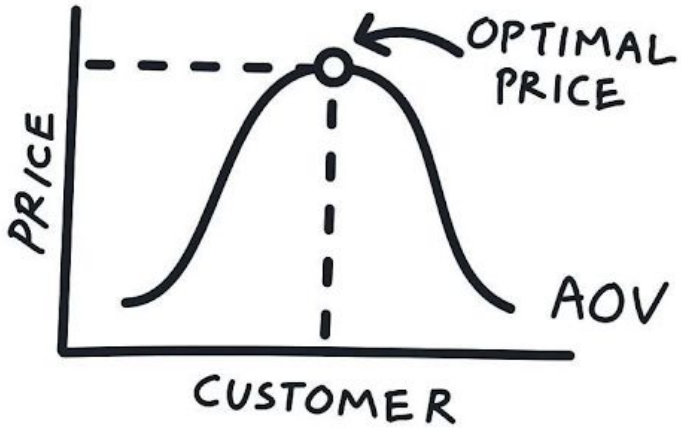
The first variable to look at is the ideas that you are putting out in the world to try to attract people to your products. This goes for the ideas themselves, and the distribution of those ideas. We've talked about the importance of disruptive ideas and how much they contribute to getting people to purchase your products. Keep track of thoughts, ideas and breakthroughs you are having so that you can create content about those ideas. The second part of this is the distribution. You can have great ideas but if no one hears them it won't do much for you. Even if you don't have a big following you still have to do what you can to get the ideas out to as many people as possible. The best way to do this is simply to break down all the social media platforms at your disposal and distribute the ideas on every placement available to you. Post in your Instagram feed, and stories. Facebook news feed, story, in your groups, and if you have a bot with subscribers broadcast there too. LinkedIn news feed, create articles, post in LinkedIn groups. Post on your YouTube channel. Broadcast emails, and SMS. You get the idea, break down each platform available to you into the different placements and publish your ideas on as many as you can. When you find the ideas that resonate the most you should also consider running them as retargeting ads to your different products. It's probably a good idea to hire a virtual

Easygroupbuys.com

assistant to help with publishing as it could easily be systemized and handed off to a low-dollar outsourcer.

THE SALES PAGE

There are plenty of elements that can be improved on your sales page in order to increase the conversion rate. You can start with the basic economics of it: the price of your product. We've noticed that a lot of people are naturally inclined to think that the maximum price they are able to "get away with" is the best. This is not the case. Your AOV is a function of the Price and Number of customers. There is a sweet spot for pricing that brings in the most amount of money, it is never the maximum price that you can get buyers at. It is the point at which the number of buyers times the price yields the maximum revenue. Test different pricing.



Add more or better proof to support the claims that you are making. This is different from testimonials. Think of your sales page as a courtroom. There is a judge and a jury and your sales page is there to convince them of the case that you are trying to make. Testimonials are like a witness being put on the stand and sharing their point of view. Proof is like evidence being submitted to strengthen your case, such as the weapon used in a murder case for example. You can use indirect third party endorsements that support your case, just make sure to quote them properly and link to the resource.

Add more, better, or different types of testimonials. Testimonials tend to do best when they overcome common objections. If a product is notoriously expensive and a common objection is the price of the product, this testimonial would actually improve conversion rates: “I was a little skeptical to make the purchase based on the price, but once I did it became clear very quickly that I’d made a very good decision.” So when you do ask for testimonials it helps if you can educate the customer on what common objection they could touch on. A big challenge with testimonials is the simple fact that you are asking someone to do something for you which has zero benefit to them, this always leads to procrastination. A simple way to combat this is to write the testimonial yourself and simply get approval from the customer who it will be attributed to before using it in your marketing. Never publish testimonials you wrote without approval. This takes us to the topic of the different types of testimonials: mainly video vs. text. You know what to do: get both

Easygroupbuys.com

types. Some like to watch videos, some like to read. Another potential challenge is the lack of testimonials you might have when publishing a new product, and this was something we ran into with the 2 Hour Agency book that we published. We overcame it by using testimonials about me that I had collected from people who had worked with me in the past, and once we launched the product and started to get testimonials about the product we added those to the page. So if you have no product testimonials try to get some about the person or the company behind the product, that's better than nothing, then simply add product testimonials as you acquire them.

Add or improve your guarantee. Don't have a "no questions asked" refund guarantee? Add one. Offer 30 days? Try 60 days. Also consider the anxiety that goes into asking for a refund. Most people don't want to do it, especially if it's going to be uncomfortable. This is something they will be considering when they read about your guarantee. If they see you have a refund guarantee but it looks like they might have to get on the phone with your company and prove why they're worthy of the refund, that's going to create a lot of anxiety, which will prevent some people from making the purchase. If you offer a "no questions asked" refund guarantee you can alleviate their anxiety by actually describing how easy it is to get a refund. "Simply send an email to support@yourdomain.com (or call 1-800-555-5555) with your purchase details and you'll be refunded within 24 hours, no questions asked, ever." Adding the phone numbers also shows how easily accessible you are.

Improve your product presentation. Recently my wife made some turkey and rice for my 2 year old daughter, and although I didn't have the heart to tell her, it looked awful. My wife cooks a lot of great food but this was white rice, and white turkey. No seasoning. No sauce. No color. My daughter, like all of us, eats with her eyes first. Sure enough, she simply shook her head and refused to eat it (and she loves food). I took the food and threw it back into the frying pan, added some onion, seasoning, and a little ketchup for color. I put some sour cream on top as she loves it, and she proceeded to finish the entire thing. They say don't judge a book by its cover, but we all do. Don't try to fight it. Make your product look appealing. Make them want to have it just by looking at it. Get an A player designer to breathe some life into your product presentation and people will want it. After all, the only thing you can sell online are pictures of things, not actual things.

Increase relevance of bonuses. Bonuses should not be random things thrown on top. They should have a purpose that adds to value the end customer gets. Consider what bonuses you are giving out, can you add more more? Can you make them more relevant? Can you solve a bigger problem with your bonuses?

Optimize the call to action. Experiment with adding more call to action buttons in relevant places. Test the colors and more importantly test the copywriting on the button. Copy that tends to focus on what the customer is getting will produce a different

emotion than copy focused on the money leaving their bank account. Example: “Rush my book now!” vs. “Pay now”. Also show your million dollar product presentation nearby the call to action buttons to further remind them about what they’re getting.

Remove abstraction by showing how it works. There’s a chance that people are struggling to form a mental image of what the outcome is going to be from buying your product. This is more important than you think. The outcome may be too abstract. Help them paint that picture by showing the outcome and how we get there.

Less form fields. Only ask for absolutely essential information in your order form. Each field you add will ding your conversation rate just a little bit.

Headline. Split test different headlines to find the winner. The same goes for pre-headlines and subheadlines, and the copywriting on the sales page.

Background colors and images. Try different background colors and images that are congruent with your branding, audience, and what the outcome that you’re selling is. Consider things such as the fact that 8% of males are color blind and certain shades of green are incredibly harsh on their eyes to the point where they may not be able to stick around on your sales page due to the simple fact that it’s physically uncomfortable for them. Why do you think every social media platform is blue?

Easygroupbuys.com

Imagine voluntarily losing out on 8% of your market by choosing the wrong color. Not a great business move.

Site speed. Sales pages, especially the kind that we make are notoriously long and have lots of elements on them. This can cause the site to load slowly, leading to lost sales. Run your site through tests on https://tools.pingdom.com/ and https://developers.google.com/speed/pagespeed/insights/ and hire someone to improve the speed. Ideally your site should be loading at a maximum of 5 seconds, but hopefully closer to 2-3 seconds. This may be difficult due to the size of our sales page, but do what you can.

Responsive design. If you follow our teachings a lot of your focus will be on getting that initial sale when the user is on a smartphone. Obviously, it's important that your sales page is responsive and works well on phones. Tablets account for very little sales (1% for us) , so you can pay a bit less attention to it, but smartphones account for over 50% which means it should be the primary focus to make the purchase experience smooth on smartphones.

Stating how fast you get the product. We want to know what's going to happen next before we make a purchase, this includes details about when the product will be received. If it's a digital eBook let them know that they can be reading the book in just a few minutes. If it's a physical book let them know how quickly it ships out and how long shipping should take. There are

certain things you want to leave to the imagination, this is not one of those.

THE ORDER FORM

If they visit your order form they're ready to buy and the mistakes that you make here will prevent them from doing so. The goal is to eliminate anxiety and maximize their ability to see themselves getting the outcome they want. Make sure you restate, or summarize the product the same way you did on the sales page, using the same million dollar product presentation that we discussed earlier.

If you add things to the cart that they didn't manually select you'll add anxiety. It's a balancing act of the increase in AOV that it will produce vs. the anxiety and bad taste it might leave in their mouth.

The rest is effectively the same as from the same sales page. Show the same guarantee as on the sales page. Show testimonials. Tell them how fast they're going to get the product. Add security seals that show their payment information is safe with you.

We also add AOV boosters here such as bump offers, different modalities of the product such as an audiobook. Bump offers typically go for $10 - $97. They're those secondary needs that didn't get you to the sales page in the first place but now that

Easygroupbuys.com

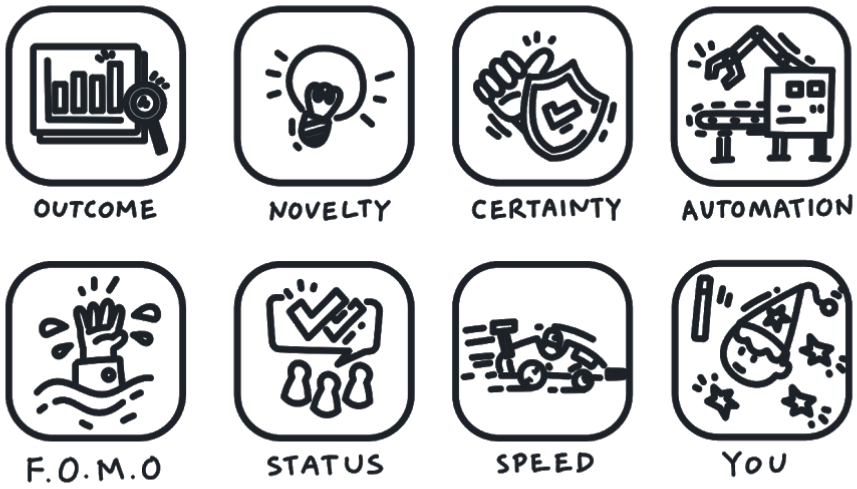
you're here you wouldn't mind also picking up the bump offer product. Just like chewing gum at the grocery store cash register.

ONE TIME OFFERS

The first thing we need to discuss is simply the importance of continuing to market and sell the one time offers even after the customer has gone through your sales funnel. You could have the products available for purchase all the time and simply provide a good deal on the product in the upsell path. Continue to do purchase behavior based email, sms, and retargeting to the one time offers after the initial purchase is made. This will add 10% to your bottom line if you do the minimum, and closer to 15-20% if you do it extensively.

ONE TIME OFFER #1

Upsell products should follow the "bigger, faster, stronger" mentality rooted in the primary mechanism of desire that got them to buy the core product in the first place. The reason they bought your core product typically falls into one or two of these categories:



So ask yourself why they might have wanted to buy your core product in the first place, and then apply the bigger faster stronger mentality to that reason. If they mainly came for the outcome, can you help them get bigger results faster? The deliverables of the product should also align with this desire. If they came for the speed your core product offers, don't upsell them a product that takes a long time to get results from. Remember to test your pricing according to the same theory we discussed earlier. As your price increases the returns diminish for the customer, so a higher price will not automatically make you more money overall, again, it's a bell curve so try to find the sweet spot by getting at least 1-300 buyers for 2 differently priced upsells in order to find a control. Then split test against the control and try to beat it.

We tend to put upsells into a few different formats. We have the "Get started fast" geared towards the Novelty and Speed mechanisms of desire. We have the "Ultimate _____ Package" where you offer templates, scripts, formulas, and so on for the

Outcome and Certainty mechanisms. 1on1 interaction for the "You" mechanism. Base your product format on the primary mechanism of desire. In regards to the marketing of the one time offer there's a few things to improve in order to get better results.

Split test sales page format. You can have a video sales letter only. A long form sales copy only. Or a hybrid.

Test out button delay timer.

Improve the video sales letter. You can test showing video controls or hiding them. Test the copywriting in the video itself. Test showing the call to action button versus having a timed delay on it. Test displaying the button at different times. Test showing the offer summary underneath the video. Test the color of the button, and the copy. Test the background color of the page and the video. Test no music vs with music. Test countdown timer in the beginning of the video vs. no timer. Test the headline. Test autoplay vs. no autoplay.

Improve the copywriting. Test headlines. Product presentation. Call to action. Testimonials. Proof. And so on (same as above sections).

<u>ONE TIME OFFER #2</u>

Base your second upsell on the secondary mechanism of desire. Look again at the list above and make a best guess what their

Easygroupbuys.com

secondary mechanism of desire might be. Is it being part of something? Offer a community. Is it speed? Offer done for you or software. Is it status? Give them an opportunity to join an exclusive group of people. And so on.

DOWNSELLS

If someone says no to your upsells you can offer downsells. We typically don't like the idea of just discounting your products without removing something from the product. Much better would be to offer a payment plan, and maybe add some bonuses. Or you could offer a trial, or extend the trial if you already offered one in the upsell. The idea is simply to make the deal a little bit easier to digest.

FOLLOWING UP

Maybe 3% of your whole audience is ready to buy immediately, upon first contact with your product. This is why following up works. Continue to be of value, and continue to be top of mind and the size of your buyers list quickly grows. 15-25% are NEVER buyers who wouldn't buy your product regardless of what you did. In between the immediate and the never buyers are big opportunities.

Stay in contact with "not now" buyers. They are going to buy, but for whatever reason not RIGHT NOW. It might just not be a good time. The pain might not be strong enough yet. They

might need more proof. They might need more information. They might need more value from you. They might need to see how it will work for them. They might not be convinced that it will work for them specifically. They might not have the money right now. Do all these things before you even think about offering a discount. Discounts offer a certain type of buyer, and while there's value in the revenue it might generate, if you're putting a $10 book on sale for $3 that's generally not going to attract the type of person you want in your life. Discounting is like salt. It always works but you risk becoming reliant on it which eventually becomes the demise of your business. Funnily enough I can actually think of a restaurant right now that me and my friends stopped going to because "everything tasted the same, just salt."

HOW TO OPTIMIZE YOUR ADVERTISING

Advertising is the only area of your business that will show you exact measures of the return of your investment. This makes it a very attractive way to invest. The feedback cycle is incredibly fast, and if done correctly, incredibly accurate. You'll know how much you spent, what you got out of it, and although not as accurate, you can see what exact ads at what placement was most profitable. The better job you do setting up proper tracking the easier and more accurate this will be. The way to look at advertising is that you are paying to find out what doesn't work so that you can stop doing it. Imagine an oil company hunting for oil sources, and they've identified three different locations that possibly has lots and lots of oil. The only way to really find out

would be to start drilling. So they deploy three teams to get started, and they find oil in one location, but the other two turn out to be nothing. So they pack up the two other teams and deploy them to go help with the one location where they did find oil. At first they were simply buying data. They were trying to find out what's not working so they can stop doing it and reallocate those resources to the things that are working. This is effectively what you are doing. The biggest problem small businesses face with advertising is lacking the funds and the emotional stability to properly do this type of advertising. Luckily our model doesn't require much money at all, so all you need to work on is the emotional stability part.

Okay so let's get to optimizing here. At this point you are already advertising and getting quite a few sales per day, so the question is what can we do to multiply these sales?

First gather your data. Filter the data by demographics: sex, age, geography. Then by psychographics: interests and behavior.

Second, try to figure out what is not working so that you can stop doing it. Look into what age groups are costing a lot of money and not bringing in returns. What geographic areas are doing best, and so on. It's important to consider your whole business here, not just your front end core product. If you optimize your advertising for book sales only but don't take into account your high ticket back end product you might end up with a lot of book buyers who don't have the funds to buy your back

end products, so keep the whole product line in mind as far as what you are optimizing for. We also look for what is working and reallocate budgets there. 80% of our budget should go into doing more of what is already working.

Third: spend 20% of your budget testing new creatives. Try direct ads that flat out show the product, and more content based indirect ads. Look back at the customer awareness diagram to brainstorm based on where your customers are at. Derive your ideas from your sales page in order to keep the congruency. Our best ad for the 2 Hour Agency was copy and pasting the bullet points of what was in the book into a Facebook ad.

As much as you don't want to think about it you also have to consider ad compliance with the various networks. If you just disregard their policies that's fine, you're just not going to be advertising for very long. They'll ban you and create a bunch of headaches. Everyone seems to get banned at some point so don't be sad if you do, but brush up on the different policies, and realize the following. They can ban you for whatever they want, BUT they shouldn't ban you if you don't make claims that clash with their policies. This causes a problem for you though, if you can't make any claims, how is anyone going to get interested in what you have to offer? The key is to make claims without making claims. We do this by using different orders of claims.

First order of claims: "make $100,000 per month". This will get you banned faster than you can say "where is the automatic

clients facebook ads appeal script" (it's down below in the bonuses).

Second order of claims: "get 30 - 50 clients per month". This is just on the edge. You might get by with this.

Third order of claims: your environment makes claims for you. The $10,000 armchair you're sitting in tells me you're successful. The rolex on your wrist does too. The Clickfunnels 2 Comma Club award on the wall in the background of your videos shows you must know something. This is really powerful stuff that communicates a lot without you saying it. This is why people rent lamborghinis for a video. Be careful with what you do with this. Most of us can smell the inauthenticity from a mile away, so if you're going to play this card make sure it's legit.

Fourth order of claims: other people in your marketplace are making claims on your behalf

Fifth order of claims: other influencers (or even celebrities) in your market are acknowledging your existence, or even making claims on your behalf.

Sixth order of claims: when you become a viral phenomenon.

Seventh order of claims: when you become the default resource for what you're selling. This is like the company name "Xerox" being used to refer to a photocopier.

Easygroupbuys.com

Each level gets more powerful, and ultimately you simply want to stay away from the first order of claims in your marketing and try to stick to the second and third order, the rest are outside of your control anyway.

To summarize, the real power of marketing is in the imagination of the customer. The power is not in what you say, but in what you don't say. They might believe, or internalize 10-20% of what you say, but they believe 100% of what they imagine on their own.

Fourth: scale to other ad networks. If you've looked under every rock and shaken all the trees on one platform it's time to start going into other networks, while following the same principles as we've outlined here. Base your next move on where your audience is likely to be, and where your economics are likely to work out. Then go find an expert on that ad network and either hire them to do it for you or pay for some of their time to get some expert insights that will save you lots of mistakes.

HOW TO OPTIMIZE YOUR OPERATIONS

Once your back end sales are dialed in, your marketing is sharpened, and your advertising is scaling up you should be running into operational issues on a daily basis. Truthfully you should have been forced to address some of these already. Let's look into that now.

Easygroupbuys.com

Fix your product. If you subscribe to the Minimum Viable Product philosophy you may have launched your product prematurely in favor of speed. I'm all for it, but if left untreated that product could ruin your business as it's causing lower reviews than you could have, more support tickets, no word of mouth, and so on. One of our friends has 30 support staff for a product that should require 2 at most. This kills their margins. The reason is that their product isn't great nor is it easy to use, and so the customers have problems that they need help with. If you're at this point you should strongly consider putting some time into improving your product. I ran into a similar issue when I started my animation video agency back in 2012. We had customers in Sweden and outsourced all the animation to Ukraine because it was cheaper. Every time our clients gave us feedback we had to translate it to english, and then send it over to the ukrainians. It was a nightmare. The product we delivered was shit, and it took forever to deliver. One day I decided to try hiring a local swedish animator for 3 times the price. I figured it's worth a test, even if it's much more expensive. That animator ended up causing me to replace my whole team to locals because of how big of an impact the improvement of our product had on our business. Videos were finished much faster, clients were much happier, they left better reviews, and told more people about us. Marketing should be your focus in the very beginning, but as soon as things are under control you should dive head first into improving your product because an amazing product is the ultimate marketing.

Easygroupbuys.com

Fix the operations behind your marketing. You should be having capacity issues in terms of being able to produce more and better content. Between putting out free content that attracts new buyers and delivering content to paying customers you should be looking into getting help with content production. To be honest with you, writing this book ourselves has turned out to be a big lesson. It turned out to be an operational issue that delayed the launch of this book. We learned from it and as a result have come up with a great process for being able to produce quality content at scale. We broke down the process of taking our ideas out of our heads and serving them to you as a book, social media post, video, or course. Once we did that it became clear that the most important part was getting the ideas out of our head into a structured outline. At that point there was no need for us to do the rest of the work, and in fact there are far more qualified people that can turn our ideas into writing, images, and videos. You should consider doing this as well. Hire writers, graphic designers, videographers, editors, and so on.

Add customer success to the focus list. Again, the product is important at this stage, much more so than when you first started. Another thing to consider doing here is adding customer success resources that help customers get the outcome they came for. Imagine if you were able to double the success rate by having someone to proactively help customers. This would result in massive compounding effects when you play it out over time.

Easygroupbuys.com

Get technical help. At the very least you should have a tech person that you have worked with before that you can contact for immediate help if need be. Your business is now at the point where any interruptions are going to be very costly for you and any potential problems need to be fixed very quickly. Depending on what you sell you could potentially hire someone full time and use their skills as part of the product you deliver. Meaning: we teach people how to get clients by creating a front end sales funnel and having back end products. There's quite a bit of tech that goes into it at the end of the day so if we had a tech guy part time acting as a customer success member and helping our students get their tech sorted it'd increase the success rate of our program and further increase word of mouth, etc. This idea of turning a cost center into a profit center should always be considered when you bring on team members.

Dial in your support and turn them into a secondary sales force. You should have a knowledge hub with commonly asked questions to minimize support tickets, a community to act as a secondary place to get support from, and you should have A player support staff who can solve their own problems, and at this point you may want to start training them on how to turn support tickets into sales opportunities. They should be able to identify opportunities and pass those onto the sales team, etc.

Get serious about your company's financials. Cash flow is always going to be your most pressing challenge. You need money to pay the bills and the money going out needs to be matched by

Easygroupbuys.com

the money coming in. The feedback cycle of your financials should be taken to the next level since you cannot afford mistakes the way you could before. You don't want to find out that you can't pay one of your bills that is due tomorrow, especially if you had the information needed to find that out 3 weeks prior, which would have given you time to fix the problem. You can also start looking into tax planning. Taxes eat up a big portion of your profit, depending on where you live of course, but it's something to consider looking into. Furthermore, depending on the industry and risk you may even need someone to manage merchant accounts. Someone to fight disputes, and keep a good relationship with your merchant account providers.

Turn your salespeople into a sales team. One of our friends with a lot of experience once told us a great piece of advice. Once you have 3 sales people one of them needs to be turned into the sales team leader / manager. This is a great way to ensure that someone is there to motivate, educate, and keep the team on the same page, versus 3 people being out there doing their own thing.

SUPERSCALING

Superscaling is simply taking things to yet another level. You're now getting 500+ sales per day and things are happening at a rapid rate. Make sure the points in the chapter above have been addressed and improved. The next thing on your todo list is turning this business into a self contained system that runs mostly without you. The first step of this is to make arrangements

so that if you disappeared off the face of the earth for 3 months you could resurface and the business would still be up and running, and doing well. It might not necessarily be growing, but it should be able to more or less maintain the same level of success without your presence. The easiest way to get to this point is simply to take a few days off and find out where the issues are. The thing that holds the company back from being able to continue to run without you then becomes your immediate focus. If the support staff crumble without being able to ask you questions either provide more training, or make another employee their point person. If the sales funnel regularly breaks and you are the person who has to take action on it, make the tech person 100% responsible for the sales funnel and make that very clear to them. Sometimes this is literally as easy as having a chat and letting them know that they're doing a great job, and for you to continue to be involved is not doing anyone any favors. A lot of A players love autonomy anyway so this is one of the best things you can do to your business. Continue to identify issues that hold you hostage to your business, and fix the issues one by one. You might need to start hiring Vice Presidents of your different departments so that you are no longer everyone's point person. Set the business up to be able to run without you. Once this is achieved your next goal is to put the company in a position to be able to not just maintain without you, but also grow. This means creating and selling new products without, and being able to do so comes down to having A players who are clear on the fact that this is part of their job, and you

trust that they're able to do it with the help of the rest of your company.

You should also look to further diversify your traffic sources. Go into more ad networks. Focus on organic channels of traffic. Set up an affiliate program, and so on.

Most mature markets tend to use Leads as their primary metric, instead of Sales. This is because of the fact that the economics are dialed in, so they know exactly what one lead is worth, and how many they need to get a sale. At the time of writing this, if you deploy our model there's not really a need to do this because the cost to acquire a customer is anywhere from $5 - $100 depending on the market, which is quite low. However advertising is going to continue to get more expensive and so we might end up with a position where getting a book buyer costs $500 in 20 years, at that point you'd be better off making Leads the primary metric instead of sales, simply because of how much faster your feedback would be.

SUBJECTIVE VS OBJECTIVE DATA

Since scaling is so much about data-driven decision making this needs to be its own sub-chapter. We need to have a little chat about data because if you base decisions on faulty data nobody is going to be surprised when things don't pan out. The truth is that perfect data is almost impossible to come by but you should be very aware of the different types of data, and the pitfalls that we see so often.

Easygroupbuys.com

Subjective data, or as we like to call it “emotional data” is one of the most dangerous things to your business. You get subjective data when you compare apples to oranges, or maybe when you wrote the copy for the upsell so you are emotionally invested in trying to find data that supports the fact that your copywriting is out-converting the old copywriting. You might look at the data from just one day of sales and say “look mine is doing better” because on that day it did, but maybe when you look at the data 30 days later it turns out that it actually wasn’t the case. This is extremely common. Subjective data is 20% accurate at best, so if you want to make business decisions based on that please go ahead, just understand what you’re getting into.

Objective data is true, unemotional data. It has a logical explanation and best of all: it contains the hidden map of exactly where you need to go. Objective data will always provide the basis for the best decision you can make at the current time. Again, it’s easier said than done to get 100% true accurate data but at the very least make sure that you remove your own emotion, or your own desire to make the data fit into a certain narrative.

CHAPTER FAQ

How do I know the "ideal" level of scaling that suits me?
Scale too much, and then reel it back. You'll only know once you cross the line. This usually becomes evident when you need to hire too many employees, or are dealing with too much stress than you're prepared to willingly take on in pursuit of your goal.

How many salespeople do I need?
For every 4 daily appointments / sales calls you're getting consider hiring one more sales person. Of course, one person could do more than 4 per day, but it's good to have excess capacity in order to leave room for growth, someone being sick, or finding another job / getting fired.

CHAPTER SUMMARY

Scaling your business introduces new challenges, not just more sales, so be prepared to handle those challenges. We've provided guidelines for fixing your back end, your marketing, your advertising, and your operations which allows you to take your business to an entirely new level. Ultimately the most common thing that breaks is the economics. Once you scale it gets more expensive to acquire a customer. Remember that the only way to fix that is to improve your economics.

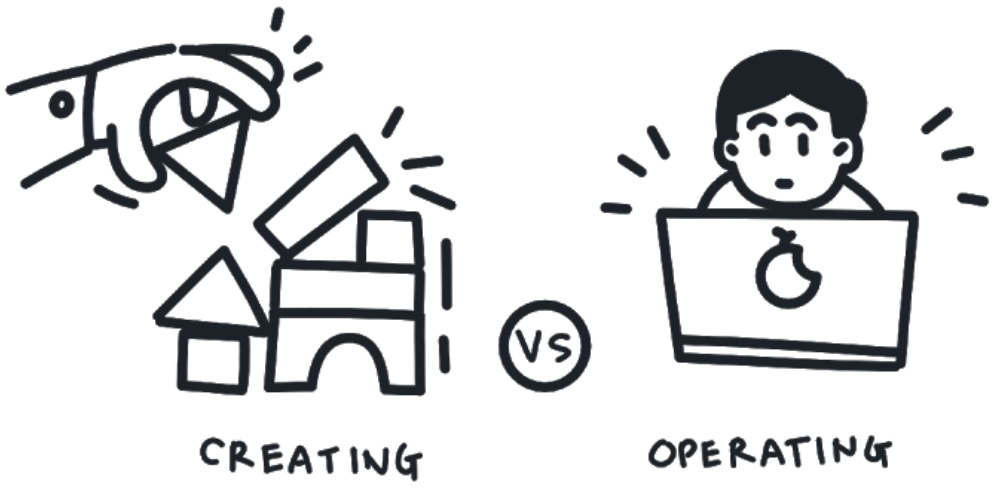
CHAPTER 20

CREATING VS. RUNNING OFFERS



There are two phases to this model. First you create the offer. This includes writing a book (or whatever product), creating your bump offer, upsells, and so on. Then you create the sales funnel, the membership area, and your support desk solution. You integrate everything and test that it works. This is the creation of

your offer, and yes, it is a lot of work. The reason it is a lot of work is because if you do it you will get incredible results that can change your life. Once all is done and you are ready to launch your offer you transition into the totally different world of running an offer. At this point your workday is going to consist more of looking at numbers, creating new ads, plugging holes in your sales funnel, improving the product, and sharpening up your marketing.

COMPONENT PROBLEMS

A lot of offers fail, not because of the offer itself but because of one very common flaw that we noticed in the people running the offer. That flaw is to view your offer / business as one holistic unit instead of looking at it based on its component parts. The reason this is a big problem is because every single offer or business will run into seemingly unsolvable complications, more than once. Now, if you look at the offer as one holistic thing all you will see is an offer that is losing money, and so you conclude the only way to stop the bleeding is to turn off the advertising and write it off as another failure. However, if you were to do an autopsy on that dead offer you might find that 90% of all the components were actually working exactly as they should, and only a few things need to be fixed.

- ➔ If someone with a faulty heart had their heart fixed they would survive, and the same applies to your offer.

Easygroupbuys.com

- ➔ If your product has high refunds the expectations aren't being met, so fix the product.
- ➔ If you have a low Average Order Value, figure out which part of your funnel is not pulling its weight according to the benchmarks we laid out in the economics calculator, and improve it.
- ➔ If your sales page isn't getting people over to the order form there's something messing up the sale on the sales page.
- ➔ If your order form isn't converting as it should something is messing up the sale on the order form.
- ➔ If your follow up is non existent add some follow up. If your follow up is good, add more. If it's great, add more.
- ➔ If your call booking page is not converting look at what can be done to increase the call bookings.
- ➔ If you are only converting 1 out of 10 sales calls look at the sales process and the sales call, and the salesperson

You get the idea. When things aren't working, it's probably not that the whole thing isn't working, but rather one or more components that aren't working. It's important to take a step back, take a deep breath, and analyze where the problem is before you can figure out what the solution is going to be.

Every dollar counts when you're running ads.

Easygroupbuys.com

When you are spending money on advertising you don't have the luxury of half assing things, leaving opportunities to increase your AOV untouched, and so on. You need to squeeze every dollar out of your offer that you can if you want to play this game, or you simply won't be playing at all. While this is true it always needs to be weighed with opportunity cost and simplicity. This means that yes every dollar counts, but you don't want to add $1 to your AOV if it means adding ten levels of complexity to your business. But, if you're selling 300 books a day a $1 increase in AOV adds up to a $9,000 revenue increase per month, so it is important. Once you realize that every dollar counts, and it starts to affect your decision making you'll stop taking shortcuts, creating crappy products, and so on. In markets with low competition you can get away with a lot more than in competitive markets. The more competitive it is the more crucial it becomes to have every single component of your business dialed into the max, otherwise your economics will not work out due to the cost of advertising.

TEAM BUILDING

Another thing you need to realize is that this is not something you should be attempting to do all on your own. Think about all the people whose businesses you admire. How many of them are doing it all by themselves? No one right? For some reason people tend to think it's possible to get the work typically done by 10 people to be done by 1 person. It's important you realize that a big

part of your job is hiring A players to join your team, and making them want to stay.

The key is to build a team that could grow the company without you, which is only doable if you hire A players. We used to subscribe to the idea of A, B, and C players, but we've come to realize that there are really only A players and C players. Sometimes C players disguise themselves as A players, but you find out pretty quickly. What we found is someone might have A player talent, and C player work ethic. This makes them a C player. There is no middle ground. B players do not exist. The reason for this approach / view is that you can easily convince yourself to keep B players onboard because they're not that bad. They're not that expensive. They don't do that much damage. There's not that much pain associated with keeping them. However, they are doing great damage to your business. For this reason we started categorizing B players into C players in order to make it clear to ourselves that they need to be replaced. What happens when you have mediocre people working for you is that you end up having to do a lot of their work for them, while you pay for it at the same time. Instead of coming up with a good idea and doing a good job, they'll need you to give them the idea and then need your feedback on every step of the way instead of just doing a good job from the start. Hiring B/C players is one of the most devastating things you can do in your business. As they say...

If you think hiring a professional is expensive, try hiring an amateur.

The other thing to keep in mind when you hire people is that each person is typically hired to do one of two things. They're either meant to be effective, or efficient, but not both. Being effective is about doing the right things, and being efficient is about doing things right. An effective worker is a critical thinker. Their job varies more, requires decision making, and is generally focused on going from where you are now to some better destination in the future. A marketing manager is very much an effective worker. An efficient worker is typically more of a routine job that is best performed by sticking to some standard operating procedure. It still requires problem solving, but on a different level. An example of an efficient worker is a customer support person. The reason we like to categorize roles into these two buckets is because once you start working with someone you typically find out pretty quickly if they're someone who has good judgement, takes initiative, and thinks on their own, or whether they simply want you to tell them what to do so they can go do it. When you know whether you're looking for an effective or an efficient worker you can start to match the personality with the job. As soon as we had this realization it became clear that we actually have a couple of employees that are mismatched. We both have efficient workers that are supposed to be effective, and vice versa.

Easygroupbuys.com

When it comes to who to hire, one basic thing to look out for is what type of tasks come naturally to you, and what type of tasks you face a lot of resistance from, or you simply aren't good at. Those are things you should be hiring help for, not what you are already good at. We found that there are all kinds of personality tests and so on but each time we took one, or had a potential team member take on, all we got was a bunch of words on paper, and nothing that actually helped us guide our decision making as far as hiring goes. We found that the information in these personality tests were too dense and needed too much analysis, which we don't have the time for, in order to actually do something with the information. Thankfully, we found a really good tool that does a great job of summarizing the data from personality tests into bite sized actionable bullet points. It lets you pull up a profile of a team member and it tells you some key points to think about if you are going to negotiate with the person, or give them feedback, or simply what tasks tend to come naturally to them. The information from this tool we found to be extremely actionable, as opposed to just a dense personality test report. Not only that, this tool lets you put several team members together and it shows you how best to make that team effective. That tool is crystalknows.com and it uses the freemium model so you can get started and take some tests for free, to try it out, then you have the option of purchasing extended reports / guides for a very reasonable one time fee. We highly recommend this tool even if it's just for you getting to know yourself a bit better.

CHAPTER FAQ

How much should I pay people I hire?
We typically get a good idea based on what the market is paying and then you want to lean on the higher end of the spectrum. The easiest way to get this number is to ask candidates that you are hiring what they expect to be paid. Once you get 5 - 10 estimates you should have a good idea of the spectrum.

How do you approach the employer vs. employee relationship?
We are very casual with a firm understanding that there is a job to be done at the end of the day. Our employees get unlimited vacation days, and a lot of freedom within their work, but this is all with the underlying agreement that their job will get done.

CHAPTER SUMMARY

The day to day tasks are very different when it comes to creating your offer compared to running your offer. To create an offer you are building products, sales funnels, strategizing, and so on. When running your offer you're hiring people, getting results for clients, managing financials, and so on. Be prepared for this 2-phase journey and don't be cheap when you hire people.

You want people who can solve problems on their own without bugging you about it. That's very different from you helping them with strategy and so on, but if your employees are asking you to think on their behalf, they need to go ASAP. This is

one of the biggest signs of a B/C player, and on the contrary when you can give someone a task, tell them what you want, and they deliver it without bugging you, it means they're going to be a great addition to your team.

Easygroupbuys.com

CHAPTER 21

REMOVING CONSTRAINTS OF GROWTH

What would you like to achieve in 10 years? Why can't you achieve that in the next 6 months? Credit to Peter Thiel for this

Easygroupbuys.com

question. The answer is constraints. You can probably achieve your 10 year goal in the next 6 months, but there are things holding you back.

- ➔ Energy Constraints
- ➔ Resource Constraints
- ➔ Knowledge Constraints

ENERGY CONSTRAINTS

Your 10 year goal requires things to get done. Let's say that you need 10,000 units of output to be achieved in order to reach the goal. Let's say you as one human have 24 units in a day, but at most you can deploy maybe 16 a day. 16 units per day for 6 months is 2,880. You can't physically achieve the level of output needed to get your goals done. Think about what you can do to increase output. You can get more efficient, you can get more effective, you can purchase software, you can hire people, and so on.

RESOURCE CONSTRAINTS

As we just covered above, resources are needed to get you the result you want. Human resources such as employees and freelancers to help you get more work done, financial resources to invest in those humans, outside consultants, in software, in advertising, and so on. What resource constraints do you have? How can you fix some of those?

KNOWLEDGE CONSTRAINTS

Chances are you also don't have the level of knowledge needed to get to where you need to go, so how can you acquire it? Can you learn it? From who? Can you borrow it by hiring a consultant? Make a list of things you don't know but need to, and figure out how to fix it. This can be hard as oftentimes there are things you don't know that you need to know, until you know them.

CHAPTER FAQ

What is the core constraint of any business?
Before you execute on the advice in this book the biggest constraint tends to simply be the lack of customers, which ironically is the opposite of a constraint. Once you solve that by executing the strategy in this book the first problem you run into is lack of time and resources. This is always solved by hiring A players and automating as much as possible.

How do I figure out my constraints?
Grab a spreadsheet, or pen and paper, and either think back to your last workweek, or better yet track the next workweek. Find out where you are spending most of your time, and whether that is the optimal thing for you to spend time on. Your time should be spent on growth and opportunities, not putting out fires, or generally retroactive tasks. Once you identify where you are spending your time and where you should be spending your time, you bridge the gap by hiring and automating.

CHAPTER SUMMARY

Think about what holds you back from being able to achieve the result you want. Make a list of every constraint you have, and then consider how you could possibly fix every single one. Then prioritize them in terms of which constraint, if fixed, would move the needle the most, and fix it.

Easygroupbuys.com

PART 3

BONUS CHAPTERS

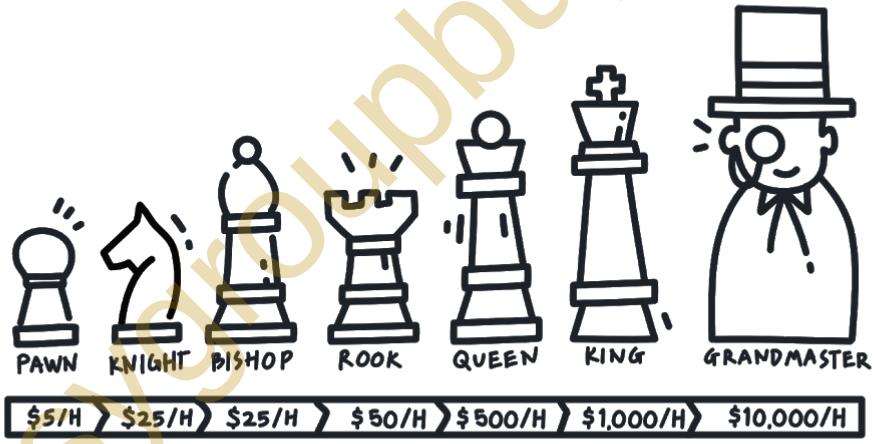
Welcome to the bonus section of this book. Let me tell you why we put them here, and why you should too. You see when you write a book like we do here it's full of things that you need to get the result you came for. These bonus chapters are not things you NEED, but rather cool things that you WANT. Have you heard of the saying "sell them what they want, give them what they need?" It's an important idea because a lot of times the thing that people need to get them the result they want is different from what they think they need. The reason I bring this up here is because you can use a bonus section of your book to fill it with "sexy" topics

that might not actually be the thing that people need, but you can use it in your marketing to attract people, but also add more value to your book. I also call these “sugar” chapters. They’re sugar to your lemonade that makes it sell a little bit better. Let’s get into it.

Easygroupbuys.com

BONUS

THE SECRET TO OUTPUT: BECOMING A GRANDMASTER



Easybuybuys.com

Think of your business as a game of chess. If you're starting from scratch you have to do everything yourself. You don't have any software to help you automate tasks, you don't have any people to delegate to. It's just you. You have to build the product / service to sell. You have to find the customers. You have to set up the tech. You have to do the accounting. You have to be the visionary.

You have to be the operator. You have to be the pawn, the bishop, the knight, the rook, the queen, the king, and the grandmaster. This is not good. You cannot effectively do each of those jobs, but in the beginning you have no choice, so you do the best you can. Your goal is to become the grandmaster who comes up with the strategy and uses the team to execute on it, not the pawn on the ground who's doing the legwork. Be the conductor of the orchestra, not the violin player. This is very difficult to do in practice, but the better you get at it the faster you move, and the bigger the potential upside. Part of our goal in this book is to help you become that grandmaster. Imagine that you had to do the following tasks:

1. Write a book
2. Hire an illustrator
3. Create a sales funnel
4. Set up a membership area
5. Help your clients get results
6. Upload docs, videos, and group call recordings to membership area
7. Look for office space
8. Handle support requests
9. Marketing your business
10. Do your laundry, dishes, and clean at home

Again, if you're starting with nothing you are most likely on your own. But as soon as possible you should be hiring people to help you, even if it's just for a few hours per week.

The idea is that in today's day in age of the internet, for a small fee you can rent other humans brains with a lot more, better and accurate processing power than yours to do the hard work that you shouldn' be doing in the first place. Elon Musk, Jeff Bezos, and all the head honchos of big tech companies are always renting other people's brains. Imagine if that todo list above looked like this instead:

1. ~~Write~~ outline a book
2. ~~Hire an illustrator~~
3. ~~Create a sales funnel~~
4. ~~Set up a membership area~~
5. Help your clients get results
6. ~~Upload docs, videos, and group call recordings to membership area~~
7. ~~Look for office space~~
8. ~~Handle support requests~~
9. Marketing your business
10. ~~Do your laundry, dishes, and clean at home~~

Do you think you'd be more effective if you focused only on helping customers get results? ... and had the tasks that we ticked off handled by other competent people? You bet. When you're spending $1,000 on advertising and bringing in at least the same amount in revenue everyday it's not a good idea for you to be handling support tickets and refund requests. Be mindful of your time and energy, and get help as fast as you can.

Ultimately we all have 24 hours in a day, and the question becomes what we do with those resources. The most successful people in the world use that time to create something that generates cash, which they then use to buy more time and brains by hiring others. This allows them to stop doing $5 tasks, then $10 tasks, then $25 tasks, then $50 tasks, then $100 tasks, then $500 tasks, then $1,000 tasks, and so on.

As soon as you start making money with our model, start to think about what you can hire other people to help you with. This all comes down to units of progress, and the fewer, higher level tasks you can focus on, while eliminating many lower level tasks, the more units of progress you can make.

Task worth per hour	**Units of progress**
$5	1
$10	2
$25	5
$50	10
$100	20
$500	100
$1,000	200
$10,000	2,000

3 TYPES OF ENERGY

You have 3 different types of energies to deploy throughout your workday: mechanical, creative, and leverage energy.

Mechanical energy is simply executing on the no-brainer stuff that needs to get done. This could be logging into your web hosting account to download the monthly invoice that you send to your accountant. It requires little thinking but needs to be done. A lot of this work can be either automated or delegated to someone else.

80% of online entrepreneurs waste most of their limited energy resources on mechanical energy. They also confuse mechanical tasks with strategic energy (more below), thinking they're worth the same. They are not.

Creative energy requires you to take nothing and turn it into something. This is when you take a blank page and turn it into a 50,000 word book. It requires tremendous energy, is difficult to outsource but doable, and you'll face incessant resistance when trying to accomplish the task at hand. You should be involved in the creative process but most likely not from start to finish. We learned a lot about this as we wrote this book. We realized we weren't taking our own advice, and needed to develop a better way to get our ideas out there without producing them from start to finish ourselves.

Leverage / strategic energy is time spent on things that will pay off in the future. It could be creating an automation for a repetitive task that will be done on autopilot going forward,

or briefing a copywriter on what you need for your long form sales letter. Leverage energy is an investment of time that will pay off in the future.

Whenever Elon Musk wants to introduce a new Tesla model he uses leverage energy by communicating to the Tesla employees who are smarter than him, more capable than him, who spent way more time than him getting good at the craft to do the task he wants.

When Steve Jobs wanted to create the iPhone he used Jonny' Ive and leveraged his creative energy, and the energy of the other Apple employees to turn it into a touchable product.

When Gary Vee wants to put out 5 videos, 10 images, 4 cartoons, 3 quotes, and 1 article, all he has to do is give 1 keynote speech, and his team takes care of the rest. Generals don't go fighting wars, they create the strategy, and this is what your aim should be.

The point here is that if you look long enough, hard enough and carefully enough...you'll notice one grand pattern emerge in the ecosystem of business. Those who effectively leverage energy get the most results. Turning a $1 into $2 using our AC model is leverage. But the precursor effect here is that work has to be done before that exchange can take place and every successful person understands this.

A system with a large energy output will always beat a system with a lower energy output. This is true in economies, in cars, in everything. A car with more horsepower generally will be faster than a car with less horsepower. More energy. An MMA fight between 3 average couch potatoes will beat the top tier

fighter due to lack of energy. In nature, energy output dictates dominance, and that's why you should focus on energy, specifically multiplying it.

As you start out you'll find yourself putting 90% of your energy into mechanical tasks, maybe 10% into creative ones (depending on your business) and 0% on leverage energy. As the business grows your quest to become the grandmaster should make you realize that the key to tremendous output is putting most of your time into leveraging energy tasks which will then add and multiply your output.

The beauty in all this is that in this day and age there are literally tens of millions of people around the world with a lot of the skill sets that you need, who are dying for a side gig. Getting help from quality people is incredibly affordable. One flaw we see a lot is people assuming that they have to hire people as employees for a full time job, which might cost them $60,000 a year. No one starting out or even in those early growth stages is going to afford that. The good news is that's not the way to do it. What you do is find quality A-players and hire them for a few hours per week. Let them help you accelerate your growth, spend more of your time on revenue-generating tasks, and as your profits grow you reinvest them into hiring that A-player for more and more hours. Start small and escalate successively.

In an ideal world you are not creating anything, you have a team around you which you communicate your strategy to, and the team turns that strategy into reality.

We found that the business we're really in is putting out ideas, and helping people get results. The problem with both

those is that they ultimately fall back on us, Robert & Alen. Eventually the creation of products and educational videos became so time consuming that we barely had time for anything else, and that's when we decided to change our approach.

Rather than writing books ourselves in the future, we now have a writer. The same goes for educational videos that go into our courses. We spent 7 weeks creating the course that you received for free alongside the purchase of this book. That's an unacceptable amount of time for us to spend on a product. This is how we solved it, and this should be your approach for transition from mechanical and creative tasks to leverage tasks.

First you break down the process into its component parts, then you challenge whether each component even needs to be there. Once you've confirmed what the component processes are necessary, then you look to delegate part of the work. Let me give you an example. This book you're reading right now, we wrote it ourselves. Here was the process.

1. Make a brain dump of all the topics we need to teach you
2. Let that list sit for a day, come back to it, and add more
3. Let that list sit for another 2 days, come back, and add even more
4. Take the list of ideas, and organize them into a logical sequence that will make sense to people
5. Go ahead and start writing out every idea until your first draft is done
6. Revisit the draft and make it better by adding, removing, and editing what you have

7. Finalize all the writing, add illustrations, chapter titles, and so on

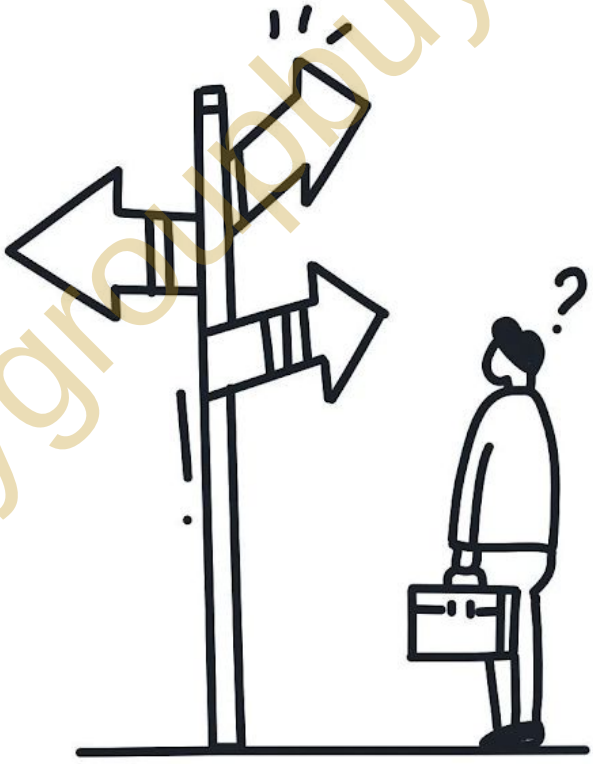
As you can imagine, the biggest time sucker above is point #5 and #6. Where point 1-4 can be done in a few days, the other points take much more time that you can't spend on anything else due to the immersery nature of writing a book. So we found a writer to help us with future content.

The ideas still come from us. The writer will know our voices, and be able to mimic that in the writing. We will be able to focus on other high level tasks, and still be able to make sure that the thing that drives our business (content, and results) gets done, and in many ways can now be multiplied in a way it couldn't before.

Easygroupbuys.com

BONUS

MAKE A F*&CKING DECISION



Easygroupbuys.com

In order to move forward in life and in business, you're going to have to make a series of decisions. A decision to do this, a decision not to do that, a decision of what to eat, a decision of

who to hire, who to fire, a decision of what market to go into, a decision of what product to make. Any given day we make thousands upon thousands of micro decisions, but where we find most people get stuck are on macro decisions. Decisions that make a difference, and there's a huge problem with that because of how much it cripples people.

If you're reading this book you are either a business owner, or you want to be one. One of the most important things that you have to come to terms with really quickly is that you have to be able to take the information available to you and make a decision about how to move forward.

The faster you can make decisions, the faster you can execute, and the faster you can get feedback and correct course, and ultimately the faster you can get to your goals. This is a topic that can really get us going, hence the title of this chapter. People's inability to make a decision is scary and comes packed with numerous negative consequences. We just don't understand how someone can own a business and be completely incapable of making a decision, and we see it all the time. People message us asking how to respond to an email they got, and we're just blown away by that. Well, rather than complaining about it, let us see if we can actually help you get better at making decisions. Note that we're not saying we'll help you make better decisions. We'll help you get better at making decisions, so that you can actually move forward instead of not moving at all.

Easygroupbuys.com

The real problem with indecisiveness is that you get nowhere.

The reason you get stuck is most likely due to incomplete information. You just don't know if that's the right or wrong path to take. But that's the whole point of having to make a decision. If you had all the information you wouldn't need to make a decision, since it would be obvious. So stop looking for complete information, it's not there.

How many times have you let a topic linger in your head for weeks on end without you moving forward in one direction or another simply because you do not want to go into the unknown? Not making a decision is actually a decision not to make a decision which creates massive cognitive tension in your mind which exhausts you from actually making the decision in the first place. It's a negative feedback loop that you're not aware of. We've done it many times, but those days are over. If it's important, we'll analyze the information we have, make a decision, throw the blinders on, and go full steam ahead to find out whether it was a good decision or not.

The issue is when you caught up trying to make the right decision all the time. It's impossible. It's a futile challenge. Alleviate some of the pressure by coming to terms with the fact that you will undoubtedly make many decisions that are wrong, but each time you do you learn something. You don't learn much by making the right decision, so find comfort in the fact that

Easygroupbuys.com

wrong decisions make you better. Also realize that you CANNOT know the answer until you move forward. It's impossible. The only way to get the answer is to pick a path, follow it, and find out whether it was right or not. The best we can do is make a "best guess in time" with whatever information we have available to us.

Ultimately, if you make a decision that is wrong you learn a lesson for life. If you make a decision that is right you get the result you were looking for. If you don't make a decision you get absolutely nothing. Both right and wrong answers have value, indecision does not.

This is the "win or learn" philosophy that we operate on. Apart from reprogramming the way you think about problem solving and decision making in general there's one more practical tip we'd like to send your way. When making a decision, look at what information is available to you at that time, make your decision, and consider going forward with that decision, then, ask yourself if you'd make the same decision again based on the information available to you at the time. Again, we can't know the future so the idea is not to have the right decision, but rather

making the right decision based on the information available to you.

In many countries you can look at the statistics of the people that are dying from coronavirus, and realize that for the most part those people are actually the same age as the average life expectancy. This makes you reconsider if it was actually a good idea to shut down whole economies to prevent people who were in the average life expectancy age range from dying. Now, when the shutdowns occurred we didn't have as much data as we had at the time of writing this, and for that reason it was in our opinion the right decision at the time, but with the data we have now we're not so sure. It depends how all this unfolds, there's still more data needed.

There's another great example of this in the first season of the show Undercover Billionaire. One thing you'll notice with hyper successful people is that they are not afraid to spend money to help them make decisions, as it turns out this is still true even when they barely have any money. Undercover Billionaire Glenn Stearns has scraped together $2,500 by episode 2 of the show, and he needs help figuring out how to proceed with the business idea he has. At that time he has just gotten an apartment to sleep in (he starts out sleeping in his car) and so you can imagine $2,500 is really not a lot of money given that he needs to eat and pay his rent. What he does next is quite fascinating. He spends $1,000 for a 30 minute phone call with a lawyer that's going to help him make a decision regarding his business idea. Ultimately the phone call is a big punch in the gut as he finds out the ideas he had simply are not going to work due to time constraints.

Guess what: he just saved himself 2 weeks of having to find that out the hard way, and his brain can go to work on solving the newfound problems.

If you put yourself in his situation, it should really sink in that the ability to make decisions is tremendously important, that's why Glenn was willing to spend almost half his bankroll on a 30 minute phone call, when he barely had money to pay rent and eat.

On a final note as far as decision making goes, one of the best ways to get good at making decisions is experience. If you don't have the necessary experience, you go rent it somewhere else, just like Glenn. Clarity.fm is a great website where you can get in touch with all kinds of experts and pay them for 15 minutes of their time, to help you make an even more informed decision based on experience from someone else. I've used it a few times myself, and each time it turned out to be well worth the money.

BONUS

GOOD ENOUGH IS PERFECT

One of the most crippling things that prevent people from launching their products is that they are tripped up by their desire for things to be perfect. This stems from fear of failure, being judged, and this desire for things to be perfect has killed a lot of dreams. You can spend 10 years working on your offer but if you never launch it all that work would have been in vain. It made no money, nobody saw it, and you are no better off than before. The one sentence that can set you free from the pressure of needing everything to be perfect is the idea that “good enough is perfect”. This sentence will allow you to move forward. It will help you launch. It can change your life. Your offer is binary: you

have either launched it or you have not. Nothing else matters until you launch. This comes down to the battle between the Minimum Viable Product model and the Launch When Ready model.

The benefits of the MVP model are speed, and the mental win of being able to see progress in the form of actual results. The downside is that the product is going to subpar which will not work as a long term solution.

The benefits of the LWR model is that you should have a very solid product by the time you launch, so your customers should be very impressed from the start, and hopefully tell their friends about it. The downside is that you can expect to spend 5 - 10 times longer before you launch, which means you will be having a mental battle of frustration and impatience due to not being able to see any results.

We believe the ultimate model is somewhere in the middle. You make a product that isn't crap, but not perfect either. You launch relatively fast while knowing that your product is not finished and you HAVE to improve it as customer feedback comes in.

FACEBOOK APPEAL SCRIPT

If you've done any advertising on Facebook chances are you too have had your account banned, or at least ads rejected. We've developed a template appeal script that we use to get accounts unbanned, ads approved and so on. At the time of writing this script has worked for me personally 100% of the time (probably 3-5 separate occasions). Take this template, modify it to fit your business, and send in your appeal.

"Hey team, I believe my ad is compliant with the Facebook policy.

I own XYZ - I use facebook ads to promote XYZ

None of my advertisements contain false claims, and every claim that I make consists of my own results, and I prove that with substantial evidence. I do not promise any results, and on all my pages I have a very detailed disclaimer on each page saying that this is not a get-rich-quick scheme, nor does it offer any work-from-home type employment opportunities.

Regarding my ad copy, I only talk about my results and I'm showing what I did to achieve them. I do not promise or make any false income claims.

Thank you for taking the time to read this request and for the manual review, I believe my business will be found to be in-compliant with Facebook Advertising policy."

Good luck!

Robert Neckelius Like Page •••

Written by Masterminds Agency EOOD [?] · June 28, 2019 ·

My name is Robert Neckelius, and I wrote the 2 Hour Agency book for anyone and everyone looking to start, scale and automate their agency.

It's a 168 page book that goes over a system I developed running my a digital agency and generating over $700,000 in sales using this model.

❌ My agency has no office
❌ I don't have a huge staff
❌ I don't have massive overhead

✅ I have a simple web site that sells our services
✅ It runs on 100% auto-pilot
✅ We average 6 - 10 clients per month

Here's a few things you'll discover in the 168 pages of the 2 Hour Agency book:

Here's a few things you'll discover in the 166 pages of the 2 Hour Agency book:

✅Discover the exact step-by-step process for finding the most profitable (and untapped) agency ideas that can generate income for years to come (I used this process to generate over $200,000 / year myself)

(All explained on page 33)...

✅My own private list of 41 pre-researched, highly lucrative, proven and profitable agency niches (you can start selling in today)

(List is located on page 34)...

✅The hidden places (and communities) on the internet where 94% of your future customers are waiting to hire your agency (and are willing to pay premium)

(Revealed on page 76)...

✅The copy-and-paste 4 sentence paragraph that gets you your first couple of clients in week 1 (so you can get the ball rolling) - Works every time

(See Page 57 to copy-and-paste)...

✅The 7 most common mistakes agency owners make (that actually prevent them from getting new clients on auto-pilot) and how to fix it so you can scale your agency while you sleep

(Explained on Page 22)...

✅How to triple your revenue and profits (all by tapping into your clients undiscovered needs and wants) using an automated "sales amplifier" process

(Broken down on page 98)...

✅The step-by-step process for generating and endless stream of testimonials and 5-star reviews (and strategically using them to increase your conversion rates by 378%)

(Outlined on page 56)...

✅The top-secret web site formula (that took me 6 years to refine) - allowing any agency to instantly go from a showroom to becoming an automatic selling machine)

(Illustrated on page 68)...

✅Why focusing on getting new leads is #1 mistake agency owners make (and why it will actually kill your sales) - and what to do instead

(Explained on page 10)...

✅The breakthrough traffic strategy that generated 1,400% ROI (it still works to this day) - and it's not what you think

(Revealed on page 89)...

✅The exact technology stack I use to put my entire agency on autopilot (automating freelancers and marketing) -allowing me to only work 2 hours per week

(Turn to page 104)...

✅My entire step-by-step digital agency process responsible for $700,000 in sales that allows prospects to find us to automatically delivering our services to them (this is the core of 2HourAgency)

(Explained on page 106)...

✅How to find and hire smart, dependable and talented part time virtual employees that run your business for you (without you ever being out of pocket for the costs)

(Check out page 112)...

✅The little known strategy I used to get my digital agency featured on the "Ask Gary Vee Show" (Which resulted in $17,425 revenue) - and how you can replicate this strategy today to get your agency hosted on just about any show

(See page 133)...

✅An amazing method I use to get digital shoutouts from world-famous influencers like Lewis Howes (and how you too can implement this in your very own agency) - gives you instant authority, credibility and social proof

(Flip to page 138)...

✅My system for staying ultra productive (that allows me to do more than when I worked 60 hours a week) - this is one of my secrets to being able to run a 2 Hour Agency

✅How to leverage your agency to get free press, event tickets, gym memberships, accounting services (and anything else you can think of) - travel the world for free

(see page 147)...

✅How I get $75,000 worth of free air travel tickets every year (by leveraging credit card points in my agency) and how you can do it too by doing this one thing

(Illustrated on page 142)...

✅The ultimate list of my agency tools and resources (I use daily) to automate my entire agency - you'll want to start using these A.S.A.P.

(All on page 156)...

✅Behind the scenes interview with a 7-figure 2HourAgency owner (and how he grew his agency from ZERO to $7 figures while traveling the world)

(Check out page 150)...

✅And much, much more!

If you want to learn how to only work 2 hours a week and make 6-figures or more, then download the 2 Hour Agency book.

➡️ https://get.2houragency.com/offer

It's only $5.60 and comes with a 30 day money back guarantee where you can get a full refund and keep the book if you're not happy.

BONUS

GET UNSTUCK: THE ONE ITEM TODO LIST

Easygroupbuys.com

Have you ever found yourself with 1,000 things to do and unable to even do 1? Productivity is something you have to come to terms with as a business owner. You have to figure out how you work best, what you're good at, what hours you should be working, and so on.

In this mini chapter I just wanted to introduce you to the idea of the one item todo list. You see we live in a world of distractions. From having 20 tabs open, to your phone in one hand and laptop in the other, Slack, email, skype, iMessage, whatsapp all open at the same time, and so on. You're severely limiting your productivity by splitting your attention in too many directions. If you find yourself here, try out the one item todo list. Figure out the one big thing you need to do, put it on your todo list, and do nothing else until that task is finished. You'll see progress instantly. This splitting of attention can be lethal to your business, so carry this concept with you as you grow your business.

Ultimately once you boil down a week of your time, after sleeping, and assuming ideal conditions you have about 100 hours per week to deploy into something. Those hours go into showering, brushing your teeth, cooking, gym, watching Netflix, kids, significant others, working, hanging out with friends, going out, and so on. Think of these 100 hours as 100 units of productivity, they have to be deployed somewhere.

You can deploy 40 towards work and 60 towards family. Or 60 towards work and 40 towards family. Whatever time you allocate to your work you then also have to split that into different categories. Admin. Marketing. Different projects, and so on. So the big question here is: how much faster and further could you move if you deployed maximum energy and time into 1 project, or if you had 5 projects that all pulled you in different directions? To get the most amount done minimize the number of things to focus on, and maximize the time you put into it.

OUR TECH STACK

When it comes to the technology side of building an offer like we've taught you in this book the most important thing in the beginning is just to get it done. Don't worry about perfect, don't worry about optimizing. Worry about launching. For this reason we'll share two different tech stacks with you that have different purposes, and apply to people based on where in their journey they are. When starting out the most important thing is simplicity and speed. Once you start hitting $500,000 - $1,000,000 per year you should consider upgrading your systems. The reason for this is because any system that is designed to be simple is by definition limited to certain simple functions. This means that the price you pay for simplicity is flexibility. There are things that you will want to do with your technology that you'll be unable to.

Alen had to spend months convincing me to switch our tech stack to a more robust, flexible solution that would allow us to do all kinds of customizations aimed at increasing our revenue even further. I didn't want to switch because switching costs are a real bitch. Eventually we switched, and it was 100% the right decision. With that said, here's what we started out with.

Version 1.0

Clickfunnels - This is the simplest way for you to get started without complicating things. You can build your sales funnel, process payments, and set up a membership area.
ThriveCart - After a few months we did one small upgrade to ThriveCart for our shopping cart. They have slightly better tracking and customization than Clickfunnels. Better tracking, handling of different sales taxes and VAT were some of the things we really liked.
Active Campaign - This is our email marketing slash marketing automation software of choice. It's very good, and we recommend it.
Zapier - This is the glue you sometimes need to connect different apps. You can get a bunch of stuff done with their free plan.
Sales msg - This app allows you to do 2-way texting if you'd like to automatically start conversations with people who buy your front end book, in hopes of having an appointment setter on your team that can get you more strategy calls.
Vimeo - This is where we host videos
Schedule Once - This is what we use to schedule strategy sessions

Version 2.0

We ditched Clickfunnels, ThriveCart and moved over to Infusionsoft and a membership area in Wordpress that has been secured. Doing orders over Infusionsoft API (requires a developer) allows a lot more flexibility than you'll find with Clickfunnels or ThriveCart. Our pages are now created by a designer and then sliced by an HTML developer. This allows us further flexibility, and a big page speed decrease.

The other apps above we continued to use.

Easygroupbuys.com

SUMMARY

The Automatic Clients model provides coaches, consultants, digital service providers, content creators, and professional service companies a way to get hundreds of new customers everyday, as well as a process for converting those "$5 customers" into high ticket $5,000 - $10,000 clients. We developed this model after releasing our first book and seeing how easy it was to sell compared to getting people to watch a webinar.

It's our hope that you'll use this book to come up with your own offer, take it to the market and have your best year ever. You might want to consider applying to our Automatic Clients Accelerator where we take you through each step of the process, and if offered an invitation to join, you would get to be part of our inner circle. The energy in our group is truly amazing and everyone is there to add value. If interested please schedule a call with us to discuss if you're a good fit.

Easygroupbuys.com

WANT US DO YOUR MARKETING, TECH, SUPPORT, AND FUND YOUR ADVERTISING? YOU JUST FOCUS ON PRODUCT / CONTENT CREATION.

We are always looking to build new offers and team up with talented product / content creators. The way it works is simply

that we use our resources, team, and experience to build an offer around you as the talent. We become partners, and make money together. If you're interested in this simply fill out our form below. We check it weekly so there's no need to track us down about updates. If we find something interesting we will get in touch with you.

Fill out the talent form here:
https://automaticclients.com/talent

JOINING THE AUTOMATIC CLIENTS ACCELERATOR

You made it this far, and that means only one thing: **you want to do this**.

So now you 3 have options.

1. Do nothing.
2. Do this on your own.
3. Or do this with our help.

If you do nothing here's what will happen: well... nothing. You will continue with the same dreams and the same gap between where you are now and those dreams.

If you decide to do it on your own here's what your journey will look like. You'll study this book, probably buy our two upsells (you should if you intend on doing this), and you'll start chipping away. You'll figure out your market, your disruptive idea, your superpower. You'll outline your book, and start writing. You'll get our sales page template and start putting your copywriting, and images on it. You'll create some ads and start getting some sales. But at some point in that journey you'll run into a problem. It will be a fixable problem, but it will seem like EVERYTHING has stopped working, and that you should just throw in the towel. How do we know this? Because it happens to everyone. It happens to us, it happens to our students, and it will happen to

Easygroupbuys.com

you. Although you can do it on your own, your probability of success, and the speed at which you acquire that success will not be nearly as high as if…

You decide to do this with our help. Now before I explain what that looks like, please understand we don't accept anyone. We first need to figure out 1) if we can help you and 2) if we want to help you. If those 2 things are satisfied, then we onboard you to the Automatic Clients Accelerator, where our goal is to help you implement everything as fast as possible. We basically give you everything we use internally to build our own offers and scale them. It's beyond of the scope of this book to outline what that looks like as it's an evolving process, but you can learn more about it by booking a call.

This is not some high pressure sales call, but rather we walk through what you want to sell, and how we would go about doing it together. This allows us to see whether we can, and want to help you. Ultimately the vibe and energy in our group is absolutely amazing, so we do everything we can to maintain that by letting in the right people. If we don't think you're a good fit we'll let you know, and offer some alternatives. To book your call visit

GLOSSARY

Front end (“FE”) - The series of products from your sales funnel: Core product, Upsell 1, Upsell 2, etc
Core product (“CP”) - The main product you sell, in our case… this book
Value vehicle (“VV”) - the core product
Upsell / One Time Offer (“OTO”) - Product promoted immediately after the sale of the core product. Upsell 2 offered immediately after upsell 1, and so on.
Bump offer - A product offered on the checkout page that is added by ticking a checkbox.
Average Order Value (“AOV”) - how much each customer spends on average on your front end products
Average Order Value Contribution (“AOVC”) - how much each product contributes to total AOV
Maximum Lifetime Value (“MLTV”) - the highest possible amount that a customer can spend with you based on your current product offerings
Back end (“BE”) - Products and services intended to make you profit. This typically includes recurring programs and high ticket consulting
Value bombs (“VB”) - pieces of content intended to move people closer to buying your back end products
Awareness bridge (“AB”) - a specific piece / series of pieces of content intended to get viewers sign up for a sales call to purchase your back end products
Minimum Viable Product (“MVP”) - A product that is effectively a first draft
Launch When Ready (“LWR”) - A product that is assumed to be the final version of the product, basically opposite of an MVP product

Business To Business ("B2B") - A business that primarily sells to other businesses. Transactions are often higher than B2C, but markets generally much smaller in size. Example: IBM

Business To Consumer ("B2C") - A business that primarily sells to consumers, as opposed to businesses. Transactions are often lower, but the number of potential customers typically makes up for that. Example: Netflix
